Therefore, good typesetting is essential for a product, especially education products, and the Information-Technology-Management test material can avoid these risks very well.

WGU Information Technology Management QGC1 Sample Questions (Q74-Q79):

NEW QUESTION # 74

What starts systems development life cycle (SDLC)?

- A. Planning
- **B. Business needs**
- C. Budget approval
- D. Stakeholder buy-in

Answer: B

Explanation:

The SDLC begins with identifying business needs, which define why a new system or software is required. These needs are analyzed to determine requirements and ensure that the system aligns with organizational goals.

Option A: Budget approval comes later in project initiation.

Option B: Stakeholder buy-in is important but occurs after business needs are defined.

Option C: Planning is the second step, following the identification of needs.

Thus, the SDLC starts with Business needs.

WGU Information Technology Management - Systems Development Life Cycle, section on Initiation and Business Needs.

NEW QUESTION # 75

What is the focus of materials management in supply chain management?

- A. Eliminating the need for inventory control
- B. Designing production to optimize equipment placement
- C. Developing strategies to promote products in the market
- **D. Coordinating the availability and movement of materials and products**

Answer: D

Explanation:

Materials management within supply chain management focuses on coordinating the availability, flow, and movement of raw materials, components, and finished products. This ensures that production schedules are met, inventory is managed effectively, and customer deliveries are fulfilled on time.

Option A: Equipment placement is part of production design, not materials management.

Option B: Materials management includes inventory control, not eliminating it.

Option C: Marketing strategies are unrelated to supply chain material flow.

Thus, the correct focus is coordinating the availability and movement of materials and products.

WGU Information Technology Management - Supply Chain Management, section on Materials Management.

NEW QUESTION # 76

Which material in electronic devices poses an environmental hazard?

- **A. Mercury in displays**
- B. Aluminum in casings
- C. Gold used in connector pins
- D. Plastic used for insulation

Answer: A

Explanation:

Mercury, commonly found in older LCD displays, fluorescent backlights, and some batteries, is a toxic heavy metal that poses significant environmental and health hazards if electronic waste is not disposed of properly.

It can contaminate soil and water supplies, harming both humans and wildlife.

Option B: Plastic is generally not toxic in the same way, though it contributes to waste.

Option C: Aluminum is recyclable and not considered highly hazardous.

Option D: Gold is valuable and recyclable, not an environmental hazard.

Therefore, the hazardous material in electronic devices is mercury in displays.

WGU Information Technology Management - IT Sustainability and E-Waste, section on Hazardous Materials in Electronics.

NEW QUESTION # 77

What improves IT sustainability?

- A. Buying the latest devices immediately upon release
- B. Standardizing high-performance hardware for all tasks
- C. Using efficient hardware and power settings
- D. Expanding the size and capacity of data centers

Answer: C

Explanation:

IT sustainability focuses on reducing environmental impact and promoting energy efficiency in technology use. This is achieved through measures such as:

Using energy-efficient hardware

Implementing green data center practices

Adjusting power management settings

Extending equipment life cycles where possible

These practices lower energy consumption, reduce waste, and support corporate social responsibility goals.

Option B: Incorrect-frequent replacement of devices increases e-waste and is not sustainable.

Option C: Incorrect-expanding data centers generally increases environmental footprint.

Option D: Incorrect-using high-performance hardware for all tasks wastes energy when simpler systems would suffice.

Therefore, IT sustainability is improved by using efficient hardware and power settings.

WGU Information Technology Management - IT Sustainability Practices, section on Green IT and Energy Efficiency.

NEW QUESTION # 78

An organization wants to use an application software that increases the cooperation and joint productivity of small teams of employees.

Which application software will serve this need?

- A. Data management
- B. Program management
- C. Collaborative systems
- D. Personnel systems

Answer: C

Explanation:

Collaborative systems facilitate teamwork by providing tools for file sharing, communication, and project management. Examples include Microsoft Teams, Slack, and Google Workspace. These systems enhance productivity by enabling real-time collaboration, document sharing, and task management.
