

Free SCP-NPM Pdf Guide, SCP-NPM Latest Test Prep

BONUS!!! Download part of Braindumpsqa SCP-NPM dumps for free: <https://drive.google.com/open?id=175UC2vNXQpFuHq2EtT2sZ20vLPRgqG7b>

Download the free SCP-NPM pdf demo file of Braindumpsqa brain dumps. Checking the worth of the SCP-NPM exam questions and learns the format of questions and answers. A few moments are enough to introduce you to the excellent of the SCP-NPM Brain Dumps and the authenticity and relevance of the information contained in them.

SolarWinds SCP-NPM (SolarWinds Network Performance Monitor) Certification Exam is designed to test an individual's proficiency in using SolarWinds Network Performance Monitor software, which is a powerful tool for monitoring and managing network performance. SolarWinds Network Performance Monitor (NPM) Exam certification exam is ideal for IT professionals who specialize in network management and are looking to demonstrate their expertise in using SolarWinds NPM.

SolarWinds SCP-NPM (SolarWinds Network Performance Monitor) Certification Exam is designed for IT professionals who want to demonstrate their expertise in network performance monitoring using the SolarWinds software. SolarWinds Network Performance Monitor (NPM) Exam certification exam is ideal for network administrators, network engineers, and IT consultants who work with SolarWinds NPM to monitor and troubleshoot network issues.

SolarWinds SCP-NPM Certification Exam is a vendor-neutral certification that helps IT professionals demonstrate their proficiency in network performance monitoring. By earning this certification, IT professionals can differentiate themselves in the job market and gain a competitive advantage. Additionally, this certification can help organizations identify professionals who have the skills and knowledge needed to manage their network infrastructure using SolarWinds NPM.

TOP Free SCP-NPM Pdf Guide: SolarWinds Network Performance Monitor (NPM) Exam - Latest SolarWinds SCP-NPM Latest Test Prep

Our society is in the jumping constantly changes and development. So we need to face the more live pressure to handle much different things and face more intense competition. The essential method to solve these problems is to have the faster growing speed than society developing. In a field, you can try to get the SCP-NPM Certification to improve yourself, for better you and the better future. With it, you are acknowledged in your profession.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q43-Q48):

NEW QUESTION # 43

You want to create an alert that notifies you when packet loss meets or exceeds 50%, but only for a select set of nodes in your network. How do you accomplish this?

- A. Set the alert trigger evaluation to evaluate nodes to be included in the alert
- B. Create separate SWQL trigger condition for each node to be included in the alert
- C. Set an alert limitation for the nodes to be included in the alert
- D. Set the scope of the alert to only apply to nodes to be included in the alert

Answer: C

Explanation:

An alert limitation is a filter that restricts the scope of an alert to a specific set of objects, such as nodes, interfaces, applications, or groups. You can use an alert limitation to create an alert that only applies to a select set of nodes in your network, and exclude the rest. To set an alert limitation for the nodes to be included in the alert, follow these steps1:

Click Alerts & Activity > Alerts > Manage Alerts.

Find the alert that you want to edit or create a new alert.

On the Trigger Condition tab, define the condition that triggers the alert, such as Percent Loss is greater than or equal to 50.

On the Scope of Alert tab, select Limit the scope of this alert to a specific subset of objects.

Choose the method to define the subset of objects, such as Select objects manually, Use a custom SWQL query, or Use a custom SQL query.

Select or enter the criteria to filter the objects, such as the node name, IP address, group, custom property, or any other attribute.

Click Add Selected Objects to add the objects to the alert limitation.

Click Next and complete the rest of the alert configuration.

You can now save and enable the alert, and it will only notify you when packet loss meets or exceeds 50% for the nodes that you have selected in the alert limitation. Reference: 1: Limit the objects an alert applies to

NEW QUESTION # 44

You created a Universal Device Poller (UnDP) but cannot find an OID in the MIB tree. How do you resolve this issue?

- A. Restart the Universal Device Poller
- B. Rediscover the node via Network Sonar Discovery
- C. Update the MIB database
- D. Add the node to NPM for monitoring

Answer: C

Explanation:

The Universal Device Poller (UnDP) is a feature that allows users to create custom monitors for almost any statistic provided by SNMP based on its Management Information Base (MIB) and object identifier (OID).

However, sometimes the OID that the user wants to monitor may not be available in the MIB tree, either because it is not supported by the device or because the MIB database is outdated. In this case, the user needs to update the MIB database to get the latest MIBs from the SolarWinds website or from the device vendor. This will ensure that the UnDP can find the OID in the MIB tree and poll it successfully12. References: 1: Update the SolarWinds MIB Database for the SolarWinds Platform3, 2:

Monitor custom statistics based on OIDs with Universal Device Pollers in the SolarWinds Platform

NEW QUESTION # 45

You receive an alert that one of your routers is experiencing critical level CPU utilization. The router details in the web console show as critical utilization, but you do not consider the utilization on that router to be at a critical level.

What change can you make in NPM to reflect a CPU utilization level you consider to be critical for the device?

- A. Change the trigger threshold on the alert
- B. Copy the alert, change the trigger threshold, and limit the scope on that device
- C. Change the global critical CPU threshold for node statuses
- D. Change the critical CPU threshold on the node

Answer: D

Explanation:

By default, NPM uses the global critical CPU threshold for node statuses, which is 90%. However, you can override this threshold for individual nodes by editing their properties and specifying a custom value for the critical CPU threshold. This way, you can adjust the threshold according to the specific characteristics and performance of each node. Changing the critical CPU threshold on the node will affect how the node status is calculated and displayed in the web console, as well as how the alerts are triggered based on the CPU utilization. References: Thresholds in the SolarWinds Platform; CPU Critical Threshold - Forum - Network Performance Monitor (NPM) - THWACK

NEW QUESTION # 46

You can share with others the PerfStack URL of any troubleshooting project you save.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

You can share with others the PerfStack URL of any troubleshooting project you save in the SolarWinds Platform Web Console. PerfStack is a feature that allows you to create and customize interactive and dynamic charts that correlate time series data from multiple SolarWinds products and entity types. When you save a troubleshooting project, the URL becomes a sharable link that you can copy and paste to other users, such as your team members, network administrators, or product owners. The URL contains a compressed version of the project data, so it does not exceed the browser character limit. The users who receive the link can access the same project view as you, as long as they have the appropriate account permissions and limitations. References: Troubleshooting Analysis Projects, Create analysis projects with the Performance Analysis dashboard, Share analysis projects.

NEW QUESTION # 47

You configure an alert to send you an email when you have a high CPU load on your devices. Your NPM web console shows several devices have high CPU utilization, but you have not received any emails. What could be the issue?

- A. SNMP is not configured on the devices
- B. The hardware resources assigned to the system are too low
- C. The alerts are muted on the devices
- D. The alert threshold is set too high

Answer: C

Explanation:

One possible reason why you have not received any emails for the high CPU load alert is that the alerts are muted on the devices. Muting alerts means that the alert conditions are still evaluated, but the alert actions are not executed. This can be useful when you want to temporarily suppress notifications for planned maintenance or testing. You can mute alerts for individual nodes, groups, or applications, or for all alerts in the Orion Platform. To check if the alerts are muted on the devices, you can go to the Manage Nodes page and look for the Muted column. You can also use the Mute Alerts widget on the Orion homepage to see the status of alert muting. To unmute alerts, you can either use the same widget or the Unmute Alerts option in the node, group, or application details page. Reference: Mute alerts, Manage nodes, Mute Alerts widget

NEW QUESTION # 48

.....

Choosing to participate in SolarWinds certification SCP-NPM exam is a wise choice, because if you have a SolarWinds SCP-NPM authentication certificate, your salary and job position will be improved quickly and then your living standard will provide at the same time. But passing SolarWinds certification SCP-NPM exam is not very easy, it need to spend a lot of time and energy to master relevant IT professional knowledge. Braindumpsqa is a professional IT training website to make the training scheme for SolarWinds Certification SCP-NPM Exam. At first you can free download part of exercises questions and answers about SolarWinds certification SCP-NPM exam on www.Braindumpsqa.com as a try, so that you can check the reliability of our product. Generally, if you have tried Braindumpsqa's products, you'll very confident of our products.
