## **Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q74-Q79):**

### **NEW QUESTION # 74**

A healthcare administrator configures a Nutanix cluster with the following requirements:

- \* Enable for long-term data retention of large files
- \* Data should be kept for two years
- \* Deletion or overwrite of the data must not be allowed

Which Nutanix-enabled technology should the administrator employ to satisfy these requirements?

- A. Objects - WORM with versioning
- B. Files - Read-only share
- C. Objects - Life Cycle Policy
- D. Files - Connected share

### **Answer: A**

Explanation:

The Nutanix-enabled technology that meets these requirements is Objects - WORM with versioning. WORM (Write-Once Read-Many) is a feature that prevents anyone from modifying or deleting data in a bucket while the policy is active. WORM policies help comply with strict data retention regulations that mandate how long specific data must be stored. Versioning is a feature that keeps multiple versions of an object in a bucket whenever it is overwritten or deleted. Versioning policies help preserve previous versions of an object for backup or recovery purposes. By enabling WORM and versioning for an Objects bucket, the administrator can ensure that data is kept for two years without being deleted or overwritten. ### **NEW QUESTION # 75**

An administrator needs to protect a Files cluster unique policies for different shares.

How should the administrator meet this requirement?

- A. Create a protection domain in the Data Protection view in Prism Central.
- B. Create a protection domain in the Data Protection view in Prism Element.
- **C. Configure data protection policies in the Files view in Prism Central.**
- D. Configure data protection policies in File Server view in Prism Element

**Answer: C**

Explanation:

The administrator can meet this requirement by configuring data protection policies in the Files view in Prism Central. Data protection policies are policies that define how file data is protected by taking snapshots, replicating them to another site, or tiering them to cloud storage. Data protection policies can be configured for each share or export in a file server in the Files view in Prism Central. The administrator can create different data protection policies for different shares or exports based on their protection needs and requirements. #### NEW QUESTION # 76

What are two ways to manage Objects? (Choose two.)

- **A. API**
- B. SSH
- C. CLI
- **D. PC**

**Answer: A,D**

Explanation:

There are two ways to manage Objects: PC (Prism Central) and API (Application Programming Interface). PC is a web-based user interface that allows administrators to create, configure, monitor, and manage Objects clusters, buckets, users, and policies. API is a set of S3-compatible REST APIs that allows applications and users to interact with Objects programmatically. API can be used to perform operations such as creating buckets, uploading objects, listing objects, downloading objects, deleting objects, and so on. #### NEW QUESTION # 77

Which two prerequisites are needed when deploying Objects to a Nutanix cluster? (Choose two.)

- A. Microsegmentation is enabled.
- B. DNS is configured on the PE.
- C. AHV IPAM is disabled on the VLAN used for Objects.
- **D. Data Services IP is configured on the PI**

**Answer: D**

Explanation:

Nutanix Objects requires a Data Services IP to be configured on the Prism Infrastructure (PI) cluster, which is used to expose the S3 API endpoint for accessing buckets and objects. Nutanix Objects also requires AHV IP Address Management (IPAM) to be disabled on the VLAN used for Objects, as Objects uses its own DHCP service to assign IP addresses to the Objects VMs1. #### NEW QUESTION # 78

An administrator has created a volume and needs to attach it to a windows host a via iSCSI. The data Services IP has been configured in the MS iSCSI Initiator, but no target are visible.

What is most likely the cause this issue?

- A. The host's IP address is not authorized to access the volume.
- **B. The host's IQN is not authorized to access to the volume.**
- C. The CHAP Authentication has not been configured on the client.
- D. The CHAP password configured on the client is incorrect.

**Answer: B**

### Explanation:

Nutanix Volumes uses IQN-based authorization to control access to volumes. The administrator must specify the IQN of the host that needs to access the volume when creating or editing the volume. If the host's IQN is not authorized, it will not be able to see the target in the MS iSCSI Initiator3. Reference: Nutanix Volumes Administration Guide3
