

Quiz Latest Identity-and-Access-Management-Architect - Reliable Salesforce Certified Identity and Access Management Architect Test Sample

2026 Latest PrepAwayExam Identity-and-Access-Management-Architect PDF Dumps and Identity-and-Access-Management-Architect Exam Engine Free Share: https://drive.google.com/open?id=1dQNJfWc_RRwUYMwXnNCPYn0Ig5bUpH1c

One of the biggest highlights of the Salesforce Certified Identity and Access Management Architect prep torrent is the availability of three versions: PDF, app/online, and software/pc, each with its own advantages: The PDF version of Identity-and-Access-Management-Architect Exam Torrent has a free demo available for download. You can print exam materials out and read it just like you read a paper. The online version of Identity-and-Access-Management-Architect test guide is based on web browser usage design and can be used by any browser device. At the same time, the first time it is opened on the Internet, it can be used offline next time. You can practice anytime, anywhere. The Salesforce Certified Identity and Access Management Architect software supports the MS operating system and can simulate the real test environment. The contents of the three versions are the same.

To become a Salesforce Certified Identity and Access Management Architect, candidates must pass a rigorous exam that consists of multiple-choice and scenario-based questions. Identity-and-Access-Management-Architect exam is designed to test the candidate's knowledge and understanding of IAM concepts, as well as their ability to apply them in real-world scenarios. Identity-and-Access-Management-Architect Exam is proctored and can be taken online or in-person at a testing center.

Prepare with updated Salesforce Identity-and-Access-Management-Architect dumps - Get up to 1 year of free updates

If you are willing to buy our Identity-and-Access-Management-Architect dumps pdf, I will recommend you to download the free dumps demo first and check the accuracy of our Identity-and-Access-Management-Architect practice questions. Maybe there are no complete Identity-and-Access-Management-Architect study materials in our trial, but it contains the latest questions enough to let you understand the content of our Identity-and-Access-Management-Architect Braindumps. Please try to instantly download the free demo in our exam page.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q43-Q48):

NEW QUESTION # 43

Northern Trail Outfitters (NTO) is setting up Salesforce to authenticate users with an external identity provider. The NTO Salesforce Administrator is having trouble getting things setup.

What should an identity architect use to show which part of the login assertion is fading?

- A. Identity Provider Metadata download
- B. Connected App Manager
- C. **Security Assertion Markup Language Validator**
- D. SAML Metadata file importer

Answer: C

NEW QUESTION # 44

An Enterprise is using a Lightweight Directory Access Protocol (LDAP) server as the only point for user authentication with a username/password. Salesforce delegated authentication is configured to integrate Salesforce under single sign-on (SSO). How can end users change their password?

- A. Users can click on the "Forgot your Password" link on the Salesforce.com login page.
- **B. Users can request the Salesforce Admin to reset their password.**
- C. Users can change it on the enterprise LDAP authentication portal.
- D. Users once logged In, can go to the Change Password screen in Salesforce.

Answer: B

NEW QUESTION # 45

The security team at Universal Containers (UC) has identified exporting reports as a high-risk action and would like to require users to be logged into Salesforce with their Active Directory (AD) credentials when doing so. For all other users of Salesforce, users should be allowed to use AD Credentials or Salesforce credentials. What solution should be recommended to prevent exporting reports except when logged in using AD credentials while maintaining the ability to view reports when logged in with Salesforce credentials?

- **A. Use SAML federated Authentication, treat SAML Sessions as High Assurance, and raise the session level required for exporting reports.**
- B. Use SAML Federated Authentication and Custom SAML JIT Provisioning to dynamically add or remove a permission set that grants the Export Reports Permission.
- C. Use SAML Federated Authentication and block access to reports when accessed through a Standard Assurance session.
- D. Use SAML federated Authentication with a Login Flow to dynamically add or remove a Permission Set that grants the Export Reports Permission.

Answer: A

Explanation:

The best solution to prevent exporting reports except when logged in using AD credentials while maintaining the ability to view reports when logged in with Salesforce credentials is to use SAML federated authentication, treat SAML sessions as high assurance, and raise the session level required for exporting reports. SAML federated authentication is a process that allows users to log in to Salesforce with an external identity provider (IdP), such as AD, that authenticates the user and issues a security token to Salesforce. By treating SAML sessions as high assurance, Salesforce assigns a higher level of trust and security to the sessions that are established by SAML federated authentication. By raising the session level required for exporting reports, Salesforce requires users to have a high assurance session before they can export reports.

This solution ensures that only users who log in with AD credentials can export reports, while users who log in with Salesforce credentials can still view reports but not export them.

The other options are not valid solutions for this scenario. Using SAML federated authentication and blocking access to reports when accessed through a standard assurance session would prevent users who log in with Salesforce credentials from viewing reports at all, which is not the desired outcome. Using SAML federated authentication and custom SAML JIT provisioning to dynamically add or remove a permission set that grants the export reports permission would require UC to write custom code and logic to implement the JIT provisioning and manage the permission set, which could increase complexity and cost. Using SAML federated authentication with a login flow to dynamically add or remove a permission set that grants the export reports permission would also require UC to write custom code and logic to implement the login flow and manage the permission set, which could introduce errors and performance issues. NEW QUESTION # 46

Northern Trail Outfitters manages functional group permissions in a custom security application supported by a relational database and a REST service layer. Group permissions are mapped as permission sets in Salesforce.

Which action should an identity architect use to ensure functional group permissions are reflected as permission set assignments?

- A. Use the Apex JIT handler to callout to the security application and set permission sets

- B. Use the Apex Just-in-Time (JIT) handler to query the Security Assertion markup Language (SAML) attributes and set permission sets.
- **C. Use a Login Flow with invocable Apex to callout to the security application and set permission sets.**
- D. Use a Login Flow to query SAML attributes and set permission sets.

Answer: C

Explanation:

Explanation

Using a Login Flow with invocable Apex to callout to the security application and set permission sets allows the identity architect to dynamically assign or remove permission sets based on the functional group permissions in the custom security application. This ensures that the permission set assignments are consistent with the group permissions. References: Login Flows, Invocable Apex

NEW QUESTION # 47

A technology enterprise is planning to implement single sign-on login for users. When users log in to the Salesforce User object custom field, data should be populated for new and existing users.

Which two steps should an identity architect recommend?

Choose 2 answers

- **A. Create and update methods.**
- B. Implement SessionManagement Class.
- **C. Implement Auth.SamlJitHandler Interface.**
- D. Implement RegistrationHandler Interface.

Answer: A,C

Explanation:

Explanation

To populate data for new and existing users in the Salesforce User object custom field when they log in using SSO, the identity architect should implement the Auth.SamlJitHandler interface and create and update methods. The Auth.SamlJitHandler interface is an interface that defines how to handle SAML assertions for Just-in-Time (JIT) provisioning. JIT provisioning is a feature that allows Salesforce to create or update user records on the fly when users log in through an external identity provider. The create and update methods are methods in the Auth.SamlJitHandler interface that define how to create or update users in Salesforce based on the information from the SAML assertion.
