Pass-Sure C_S4TM_2023 Labs, Ensure to pass the C_S4TM_2023 Exam

How to get SAP certification quickly and successfully at your first attempt? Latest dumps from PassCollection will help you pass C_S4TM_2023 actual test with 100% guaranteed. Our study materials can not only ensure you clear exam but also improve your professional IT expertise. Choosing C_S4TM_2023 Pass Guide, choose success.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q80-Q85):

NEW QUESTION # 80

You have defined the transportation zone hierarchy shown in the attached screenshot. Which transportation lanes can you use to transport from transportation zone 5 to transportation zone 3? Note: There are 3 correct answers to this question.

- A. 1->1
- B. 4->3
- C. 1->3
- D. 1->2
- E. 2->6

Answer: A,B,C

Explanation:

In SAP S/4HANA Transportation Management, transportation lanes define valid routes between transportation zones, including those within a zone hierarchy. Without the specific screenshot, we assume a standard hierarchical structure where zone 1 is a parent zone containing zones 2, 3, 4, and 5, and zone 6 is outside or unrelated. To transport from zone 5 to zone 3, the following transportation lanes are relevant:

- * 1->1 (B): This lane allows transport within the parent zone 1, which includes both zones 5 and 3, making it valid for the route.
- * 4->3 (C): If zone 4 is an intermediate zone in the hierarchy, this lane could be used as part of a multi-leg route from zone 5 to zone 3.
- * 1->3 (D): This lane allows transport from the parent zone 1 (including zone 5) to zone 3 directly.

The other options are incorrect:

- * 1->2 (A) does not include zone 5 as the destination or zone 3 as the source.
- * 2->6 (E) is irrelevant, as zone 6 is not part of the route from zone 5 to zone 3.

NEW QUESTION # 81

What functionality is available with Basic Shipping in SAP S/4HANA Supply Chain for transportation management? Note: There are 3 correct answers to this question.

- A. Transportation Planning based on sales orders
- B. **Transportation execution without event management**
- C. Transportation Planning based on forwarding orders
- D. **Transportation Planning based on outbound deliveries**
- E. **Transportation Planning based on inbound deliveries**

Answer: B,D,E

Explanation:

Transportation Management Overview and Fundamentals

NEW QUESTION # 82

In an ERP system that is processing sales orders, situations arise when an order is created for a new customer that is a one time transaction. Transportation will have to be planned and this could cause a large amount of master data that will quickly become obsolete.

One-time-ship-to locations can be created in two ways, as follows:

There are 2 correct answers to this question.

- A. **Automatically (by the system), based on the address of an incoming transportation request to SAP TM**
- B. **Manually, by the user in the forwarding order user interface**
- C. Division

Answer: A,B

NEW QUESTION # 83

The purchasing organization can be entered on which business document? (3 correct answer)

- A. freight order
- B. freight unit
- C. forwarding order
- D. freight booking

Answer: A,B,D

NEW QUESTION # 84

You are planning to use Package Builder to estimate freight volume more accurately for better capacity planning. On what criteria can you base the definition of the package type assignment? Note: There are 2 correct answers to this question.

- A. Business partner
- B. Handling unit type
- C. Shipping type
- D. Shipping location

Answer: A,D

Explanation:

In SAP S/4HANA Transportation Management, the Package Builder is used to estimate freight volume by assigning package types to goods for more accurate capacity planning. According to the SAP documentation, the package type assignment can be based on:

* Business partner (B): Package types can be assigned based on the business partner (e.g., shipper or consignee), as different partners may have specific packaging requirements.

* Shipping location (D): The location from which goods are shipped (e.g., warehouse or plant) can influence package type assignments, as different locations may use distinct packaging standards.

The other options are incorrect:

* Handling unit type (A) is managed in SAP Extended Warehouse Management (EWM) or during execution, not directly in the Package Builder for planning purposes.

* Shipping type (C) refers to the mode of transport (e.g., road, rail) but is not a criterion for package type assignment in the Package Builder.
