New 300-720 Exam Practice - Latest 300-720 Exam Format

The 300-720 exam questions are designed and verified by experienced and qualified 300-720 exam trainers. So you rest assured that with Securing Email with Cisco Email Security Appliance (300-720) exam dumps you can streamline your 300-720 Exam Preparation process and get confidence to pass Securing Email with Cisco Email Security Appliance (300-720) exam in first attempt.

Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q207-Q212):

NEW QUESTION # 207

The security administrator wants to configure alerts on Cisco Secure Email Gateway for outbreak filters. Which two actions must be taken to meet the requirement? (Choose two.)

- A. From System Administration enable message splintering.
- B. Enable the alerts for the outbreak filters by using an Adaptive Rule.
- C. From Mail Policies, configure the Outbreak Filters settings.
- **D. From Outbreak Filters Global Settings, enable the alerts for the outbreak filters.**
- **E. From Security Services, configure the Outbreak Filters settings.**

Answer: D,E

NEW QUESTION # 208

Which Cisco ESA security service is configured only through an outgoing mail policy?

- A. Outbreak Filters
- B. antivirus
- C. AMP
- **D. DLP**

Answer: D

NEW QUESTION # 209

Which type of DNS record would contain the following line, which references the DKIM public key per RFC 6376?

v=DKIM1; p=76E629F05F709EF665853333EEC3F5ADE69A2362BECF406582670456943283BE

- A. CNAME
- **B. TXT**
- C. PTR
- D. AAAA

Answer: B

Explanation:

A TXT record is a type of DNS record that contains arbitrary text data that can be used for various purposes such as verification, configuration, or authentication. A TXT record can contain the DKIM public key per RFC 6376, which is used to verify the digital signature of an email message generated by the DKIM private key of the sender domain.

The other options are not valid because:

- * A. A CNAME record is a type of DNS record that maps an alias name to a canonical name or another alias name. It does not contain any DKIM public key information.
- * B. An AAAA record is a type of DNS record that maps a hostname to an IPv6 address. It does not contain any DKIM public key information.
- * D. A PTR record is a type of DNS record that maps an IP address to a hostname, which is the reverse of an A or AAAA record. It does not contain any DKIM public key information.

NEW QUESTION # 210

An engineer must modify the altsrhost table on a Cisco Secure Email Gateway. Messages destined for a domain named @cisco.com must be mapped to NewInterface with an IP address of 10.10.10.1. What must be added to the table?

- A. cisco.com@ NewInterface
- B. NewInterface @cisco.com
- C. @cisco.com NewInterface
- D. cisco.com@ 10.10.10.1

Answer: C

Explanation:

The altsrhost table maps a destination recipient domain to the source interface used for delivery.

Adding @cisco.com with NewInterface ensures messages destined for that domain are sent using the interface associated with IP address 10.10.10.1.

NEW QUESTION # 211

Which ESA component determines whether a recipient address is valid before the appliance accepts the message?

- A. LDAP Acceptance Query
- B. Sender Verification Exception List
- C. Outbreak Filter
- D. DKIM Verification

Answer: A

Explanation:

LDAP Acceptance Queries validate recipients against directory services such as Active Directory during the SMTP conversation. Invalid recipients are rejected before message acceptance, reducing processing overhead, preventing directory harvest attacks, and minimizing non-delivery report generation.

NEW QUESTION # 212

.....

Our desktop Cisco 300-720 practice exam software is designed for all those candidates who want to learn and practice in the actual Securing Email with Cisco Email Security Appliance (300-720) exam environment.
