

Microsoft AZ-120 Practice Test - Effortless Solution To Pass Exam

What's more, part of that PDFDumps AZ-120 dumps now are free: <https://drive.google.com/open?id=1cAP5mzBIFQwMnPVgemjSH0R6sWJQTMuy>

The made from PDFDumps is designed by way of specialists and is often updated to mirror the present day modifications inside the AZ-120 content. The AZ-120 recognizes that scholars may also have distinctive learning patterns and options. Consequently, the PDFDumps gives PDF format, desktop exercise examination software program, and AZ-120 examination questions to assist customers prepare for the Microsoft AZ-120 examination correctly.

The Microsoft AZ-120 certification exam is one of the top-rated and valuable credentials in the Microsoft world. This Microsoft AZ-120 exam questions is designed to validate the candidate's skills and knowledge. With Planning and Administering Microsoft Azure for SAP Workloads exam dumps everyone can upgrade their expertise and knowledge level. By doing this the successful AZ-120 Exam candidates can gain several personal and professional benefits in their career and achieve their professional career objectives in a short time period.

AZ-120 Pdf Version - 2026 AZ-120: Planning and Administering Microsoft Azure for SAP Workloads First-grade Valid Guide Files

Among all marketers who actively compete to win customers, we sincerely offer help for exam candidates like you with our AZ-120 exam questions. To cater to the needs of exam candidates, our experts have been assiduously worked for their quality day and night. AZ-120 Training Materials can help you achieve personal goals about the AZ-120 exam successfully. So of course we received sincere feed-backs from exam candidates which are maximum benefits for us.

Microsoft AZ-120 Exam covers a wide range of topics, including designing and implementing Azure compute and storage solutions for SAP workloads, configuring Azure network and security solutions, and managing Azure virtual machines and other resources. Additionally, the exam focuses on monitoring and troubleshooting Azure resources to ensure optimal performance for SAP workloads. Candidates will also be tested on their ability to implement disaster recovery and backup solutions for SAP workloads in Azure.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads

Sample Questions (Q153-Q158):

NEW QUESTION # 153

You have an on-premises SAP environment.

Backups are performed by using tape backups. There are 50 TB of backups.

A Windows file server has BMP images of checks used by SAP Finance. There are 9 TB of images.

You need to recommend a method to migrate the images and the tape backups to Azure. The solution must maintain continuous replication of the images.

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Tape backups: Azure DataBox

The Microsoft Azure Data Box cloud solution lets you send terabytes of data into Azure in a quick, inexpensive, and reliable way.

The secure data transfer is accelerated by shipping you a proprietary Data Box storage device. Each storage device has a maximum usable storage capacity of 80 TB and is transported to your datacenter through a regional carrier. The device has a rugged casing to protect and secure data during the transit.

File server: Azure Storage Explorer

Azure Storage Explorer is an application which helps you to easily access the Azure storage account through any device on any platform, be it Windows, MacOS, or Linux. You can easily connect to your subscription and manipulate your tables, blobs, queues, and files.

NEW QUESTION # 154

You have an Azure subscription.

You plan to deploy a SAP NetWeaver landscape that will use SQL Server on Azure virtual machines. The solution must meet the following requirements:

The SAP application and database tiers must reside in the same Azure zone.

The application tier in the Azure virtual machines must belong to the same Availability Set.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Answer:

Explanation:

Explanation:

Text Description automatically generated with medium confidence

Step 1: Create a proximity placement group

A proximity placement group is a logical grouping of Azure resources within the same Azure data center in order to reduce latency.

Step 2: Create an Availability Set

Create an availability set that references the Azure proximity group.

By adding the availability sets to proximity placement groups, the network latencies are considerably reduced, thereby improving the overall performance.

Step 3: Deploy SQL Server on Azure Virtual machines

Step 4: Deploy the application tier in the Azure virtual machines

Deploy the application layer VMs by referencing the availability set and the proximity placement group.

NEW QUESTION # 155

You migrate SAP ERP Central Component (SAP ECC) production and non-production landscapes to Azure.

You are licensed for SAP Landscape Management (LaMa).

You need to refresh from the production landscape to the non-production landscape.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation

Step 1: From the Azure portal, create a service principal

The Azure connector can use a Service Principal to authorize against Microsoft Azure. Follow these steps to create a Service Principal for SAP Landscape Management (LaMa).

Step 2: Add permissions to the service principal

The Service Principal does not have permissions to access your Azure resources by default. You need to give the Service Principal permissions to access them.

Step 3: From the Cloud Managers tab in LaMa, add an adapter

Create a new connector in SAP LaMa

Open the SAP LaMa website and navigate to Infrastructure. Go to tab Cloud Managers and click on Add.

Select the Microsoft Azure Cloud Adapter

Step 4: Install and configure LaMa on an SAP NetWeaver instance

Provision a new adaptive SAP system

You can manually deploy a new virtual machine or use one of the Azure templates in the quickstart repository.

It contains templates for SAP NetWeaver ASCS, SAP NetWeaver application servers, and the database. You can also use these templates to provision new hosts as part of a system copy/clone etc.

Note: To support customers on their journey into a cloud model (hybrid or entirely public cloud), SAP and Microsoft partnered to create an adapter that integrates the SAP management capabilities of LaMa with the IaaS advantages of Microsoft Azure.

NEW QUESTION # 156

Your on-premises network contains an Active Directory domain.

You are deploying a new SAP environment on Azure.

You need to configure SAP Single Sign-On to ensure that users can authenticate to SAP GUI and SAP WebGUI.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

NEW QUESTION # 157

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
