Latest AP-219 Test Online - AP-219 Braindumps

Besides this PDF format, Salesforce AP-219 practice exams in desktop and web-based versions are available to aid you in recognizing both your weaker and stronger concepts. These real Salesforce AP-219 Exam Simulator exams also points out your mistakes regarding the Salesforce AP-219 exam preparation.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q28-Q33):

NEW QUESTION # 28
What are two items that an administrator should consider when building out a flow for one location vs multiple locations?

- A. Having multiple locationsmandates writing custom Apex code
- B. A default warehouse location should be set first in flows handling multiple locations
- C. Multiple locations can lead to limit exceptions
- D. Multiple locations will introduce nested loops which can make the canvas substantially larger

Answer: C,D

Explanation:
When building a flow for multiple locations, an administrator should consider the following challenges:
Multiple locations will introduce nested loops which can make the canvas substantially larger. For example, a flow that handles multiple fulfillment orders per order and multiple fulfillment order lines per fulfillment order will need to loop through both levels of records. This can make the flow more complex and harder to maintain.
Multiple locations can lead to limit exceptions. For example, a flow that queries or updates a large number of records across multiple locations may hit the SOQL query limit or the DML statement limit. To avoid this, an administrator should use bulkified actions and optimize the flow performance. Reference: Order Fulfillment Flows, [Flow Performance Best Practices]

NEW QUESTION # 29
A customer orders 10 products. The products must be shipped to three different locations. Two of the orders are fulfilled at the same location. How many Fulfillment Orders would be created for this order?

- A. One Fulfillment Order per Fulfillment Location, totaling 2
- B. One Fulfillment Order pet destination, totaling 3
- C. One Fulfilment Order per item in the order, totaling 10
- D. One Fulfillment Order

Answer: B

Explanation:
The number of Fulfillment Orders that would be created for this order is one per destination, totaling 3. A Fulfillment Order is a record that represents a group of products in an order that are fulfilled together from the same location. A Fulfillment Order has a lookup relationship to the Order Summary object, and it contains information such as the fulfillment location, delivery method, status, etc. The number of Fulfillment Orders created depends on three factors: Fulfillment Location, Delivery Method and Recipient Address. These factors determine how the Order Items are grouped and allocated to Fulfillment Orders based on routing rules and inventory availability. In this case, since the products must be shippedto three different locations, three Fulfillment Orders are created for each destination. Verified Reference:https://help.salesforce.com/s/articleView?
id=sf.order_management_fulfillment_order.htm&type=5

NEW QUESTION # 30
An administrator is attempting to automatically create process exceptions for the Fulfillment Order object. When does the Create Process Exception flow get triggered?

- A. A Fulfillment Order or Order Summary object are modified and any modification meets the error criteria
- B. A Process Exception Event is fired
- C. On a daily basis using Schedule Jobs in Setup

Answer: B

NEW QUESTION # 31

What three steps are requiredwhen deploying changes via change sets?

- A. Approve the change set in the sandbox org
- B. Deploy the change set in the target org
- C. Upload the change set to the target org
- D. Add the change set to the release schedule in the target org
- E. Create thechange set in the sandbox org

Answer: B,C,E

Explanation:
Three steps that are required when deploying changes via change sets are:
Create the change set in the sandbox org. This is the first step where the administrator selects the metadata components that they wantto deploy and adds themto a change set in the source org, which is usually a sandbox org.
Upload the change set to the target org. This is the second step where the administrator sends the change set from the source org to the destination org, which is usually a production org or another sandbox org. The administrator needs to have a deployment connection with the target org and permission to upload change sets.
Deploy the change set in the target org. This is the final step where the administrator validates and deploys the change set in the destination org. The administrator needs to have permission to deploy change sets and resolve any deployment errors or warnings.

NEW QUESTION # 32

Which three statements are true about change sets?

- A. Change sets can contain only modifications made through the Setup menu
- B. A change request should be created when the admin wants to send customizations from the current org to another org
- C. Sending a change set between two orgs requires a deployment connection
- D. Change sets can only be sent between orgs that are affiliatedwith a production org
- E. Changes can be deployed to any instance of Salesforce as long as the destination has approved it

Answer: A,C,D

Explanation:
Three statements that are true about change sets are:
Sending a change set between two orgs requires a deployment connection. A deployment connection is a link between two orgs thatallows one org to send change sets to another org.
Change sets can only be sent between orgs that are affiliated with a production org. A production org is an org that is used for live operations and data, and it can have one or more sandbox orgs that areused for development and testing. Change sets can only be sent from a sandbox org to its associated production org, or from one sandbox org to another sandbox org that shares the same production org.
Change sets can contain only modifications made throughthe Setup menu. A change set is a collection of metadata components that can be deployed from one org to another. Metadata components are customizations that are made through the Setup menu, such as custom objects, fields, workflows, etc.
