It is a common sense that in terms of a kind of Salesforce Certified MuleSoft Platform Integration Architect test torrent, the pass rate would be the best advertisement, since only the pass rate can be the most powerful evidence to show whether the Mule-Arch-202 guide torrent is effective and useful or not. We are so proud to tell you that according to the statistics from the feedback of all of our customers, the pass rate among our customers who prepared for the exam under the guidance of our Salesforce Certified MuleSoft Platform Integration Architect test torrent has reached as high as 98% to 100%, which definitely marks the highest pass rate in the field. Therefore, the Mule-Arch-202 Guide Torrent compiled by our company is definitely will be the most sensible choice for you.

The development and progress of human civilization cannot be separated from the power of knowledge. You must learn practical knowledge to better adapt to the needs of social development. Now, our Mule-Arch-202 learning prep can meet your requirements. You will have good command knowledge with the help of our study materials. The certificate is of great value in the job market. Our Mule-Arch-202 learning prep can exactly match your requirements and help you pass exams and obtain certificates. As you can see, our products are very popular in the market. Time and tides wait for no people. Take your satisfied Mule-Arch-202 Actual Test guide and start your new learning journey. After learning our learning materials, you will benefit a lot. Being brave to try new things, you will gain meaningful knowledge.

Latest Released Mule-Arch-202 Interactive Questions - Salesforce Reliable Salesforce Certified MuleSoft Platform Integration Architect Exam Pattern

When you select to use Prep4King's products, you have set the first foot on the peak of the IT industry and the way to your dream is one step closer. The practice questions of Prep4King can not only help you pass Salesforce Certification Mule-Arch-202 Exam and consolidate your professional knowledge, but also provide you one year free update service.

Salesforce Certified MuleSoft Platform Integration Architect Sample

Questions (Q171-Q176):

NEW QUESTION # 171

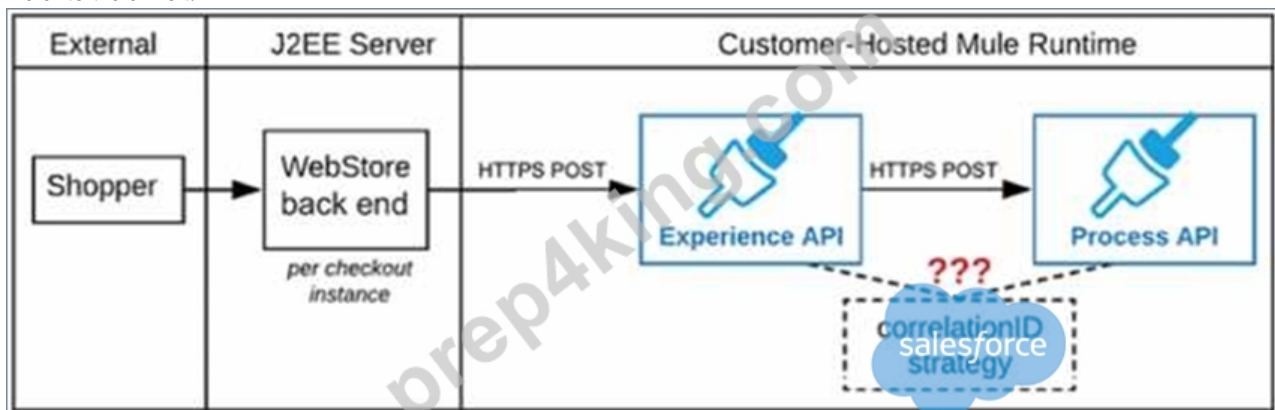

How do common messaging patterns enhance Mule application design?

- A. By enabling more effective communication between components.
- B. By ensuring consistent data retrieval methods.
- C. By requiring less frequent updates.
- D. By simplifying data transformation logic.

Answer: A

NEW QUESTION # 172

Refer to the exhibit.

A shopping cart checkout process consists of a web store back end that sends a sequence of HTTPS POST requests to an Experience API, which in turn invokes a Process API using HTTPS. The web store back end executes in a Java EE application server. All API implementations are Mule applications executing in a customer-hosted Mule runtime. End-to-end correlation of all HTTP requests and responses belonging to each checkout instance is required. This is to be done through a common correlation ID so that all log entries written by the web store back end, Experience API implementation, and Process API implementation include the same correlation ID for all requests and responses belonging to the same checkout instance. What is the most efficient way (using the least amount of custom coding or configuration) for the web store back end and the implementations of the Experience API and Process API to participate in end-to-end correlation of the API invocations for each checkout instance?

- A. The web store back end generates a new correlation ID value at the start of checkout and sets it on the X-Correlation-ID HTTP request header in each API invocation belonging to that checkout.
- B. The web store back end, being a Java EE application, automatically uses the thread-local correlation ID generated by the Java EE application server and automatically transmits that to the Experience API using standard HTTP headers.
- C. The web store back end sends a correlation ID value in the HTTP request body in the way required by the Experience API.
- D. The Experience API implementation generates a correlation ID for each incoming HTTP request and passes it to the web store back end in the HTTP response, which includes it in all subsequent API invocations to the Experience API.

Answer: A

NEW QUESTION # 173

In what scenarios is using a shared configuration within Mule runtime domains most advantageous?

- A. When deploying lightweight microservices.
- B. When multiple applications need to invoke the same services.
- C. When unique runtime properties are required for each application.
- D. When applications do not interact with each other at all.

Answer: B

NEW QUESTION # 174

A large enterprise is building APIs to connect to their 300 systems of records across all of their departments. These systems have a variety of data formats to exchange with the APIs, and the Solution Architect plans to use the application/dw format for data transformations.

What are two facts that the Integration Architect must be aware of when using the application/dw format for transformations? (Choose two.)

- A. The application/dw format can impact performance and is not recommended in a production environment
- B. The application/dw format is the only native format that never runs into an Out Of Memory Error
- C. The application/dw format stores input data from an entire file in-memory if the file is 10MB or less
- D. The application/dw format improves performance and is recommended for all production environments
- E. The application/dw configuration property must be set to "onlyData=true" when reading or writing data in the application/dw format

Answer: A,E

NEW QUESTION # 175

An external web UI application currently accepts occasional HTTP requests from client web browsers to change (insert, update, or delete) inventory pricing information in an inventory system's database. Each inventory pricing change must be transformed and then synchronized with multiple customer experience systems in near real-time (in under 10 seconds).

New customer experience systems are expected to be added in the future. The database is used heavily and limits the number of SELECT queries that can be made to the database to 10 requests per hour per user.

How can inventory pricing changes synchronize with the various customer experience systems in near real-time using an integration mechanism that is scalable, decoupled, reusable, and maintainable?

- A. Add a trigger to the inventory-pricing database table so that for each change to the inventory pricing database, a stored procedure is called that makes a REST call to a Mule application.
- B. Write a Mule application with a Database On Table Row event source configured for the inventory pricing database, with the watermark attribute set to an appropriate database column.
- C. Replace the external web UI application with a Mule application to accept HTTP requests from client web browsers.
- D. Write a Mule application with a Database On Table Row event source configured for the inventory pricing database, with the ID attribute set to an appropriate database column.

Answer: A

NEW QUESTION # 176

.....

As a top selling product in the market, our Mule-Arch-202 study materials have many fans. They are keen to try our newest version products even if they have passed the Mule-Arch-202 exam. They never give up learning new things. Every time they try our new version of the Mule-Arch-202 Study Materials, they will write down their feelings and guidance. Also, they will exchange ideas with other customers. They give our Mule-Arch-202 study materials strong support. So we are deeply moved by their persistence and trust.
