Google Associate-Google-Workspace-Administrator soft test simulator can set timed exam and simulate the real scene with the real test, so that you can practice like the real test many times.

Google Associate Google Workspace Administrator Sample Questions (Q75-Q80):

NEW QUESTION # 75

Your organization has a Shared Drive with 150 users organized as a group. All users of the group need to be able to add and edit files, but the ability to move, delete, and share content must be limited to a single user. You need to configure the shared drive to meet these requirements efficiently. What should you do?

- A. In the Admin console, assign Contributor access for the shared drive to each user. Assign Content Manager access for the shared drive to the single user.
- B. In the Admin console, assign Contributor access for the shared drive to the group. Assign Content Manager access for the

shared drive to the single user.

- C. Create a folder inside the shared drive. Share the folder link with the group.
- D. Create a folder inside the shared drive. Share the files with the group by using the share function.

Answer: B

Explanation:

By assigning Contributor access to the group, all 150 users will be able to add and edit files in the shared drive. Assigning Content Manager access to the single user ensures that only that person has the ability to move, delete, and share content within the shared drive. This approach efficiently meets the requirement of limiting certain administrative privileges while allowing the group to collaborate on content.

NEW QUESTION # 76

Your organization needs an approval application for purchases where a user can enter information on the purchase required and then submit it for management approval. You need to suggest a solution to create the application that must be available on both the web and mobile devices. Your organization does not have software developers or the budget to hire a third party. What should you do?

- A. Suggest that the organization continue to approve requests manually until budget is available to use a third-party application provider.
- **B. Suggest the organization use AppSheet to create the application.**
- C. Suggest that the organization use AppScript to create forms linked to a Google Sheet to store the purchase data.
- D. Suggest that the organization develop an application internally with a database, a backend service for data retrieval, and a frontend service for the application's user interface.

Answer: B

Explanation:

AppSheet is a no-code platform that allows users to create custom applications without the need for software development skills. It is capable of building applications that can be used both on the web and mobile devices. AppSheet would allow the organization to create the approval application efficiently, meeting the requirements of the purchase process, and would be a cost-effective solution that does not require hiring developers or using a third-party application provider.

NEW QUESTION # 77

You work for a global organization that has offices in the United States and the European Union (EU). There is an organizational unit (OU) for employees in the United States and a separate OU for employees in the EU. Your company regulations need you to ensure that your users data is located in the same region as their physical office. What should you do?

- A. Turn on advanced settings and select Disable features that may process data across multiple regions.
- B. Set the OU data location to No preference.
- **C. Set a data region policy for each region's OU.**
- D. Turn on advanced settings and select Enable features that may process data across multiple regions.

Answer: C

Explanation:

Google Workspace allows organizations to control the geographic location of their data for compliance and regulatory reasons, often referred to as "data regions" or "data locality." To ensure user data is located in the same region as their physical office, especially for compliance with regulations like those in the EU, you need to set a data region policy for the respective organizational units.

NEW QUESTION # 78

An executive at your organization asked you to give their executive administrator access to their Workspace account. You need to ensure that this executive administrator can manage emails in the executive's account. You need to maintain security and privacy of the executive's account.

What should you do?

- **A. Grant delegated access to the executive's Gmail account, and assign access to their executive administrator in Gmail settings.**
- B. Assist the executive in setting up email forwarding to their executive administrator.

- C. Create a Google Group, and add all executive administrators. Enable delegated access to the Group.
- D. Instruct the executive to share their password with their executive administrator.

Answer: A

Explanation:

Granting delegated access allows the executive administrator to manage the executive's emails without requiring access to the executive's password. This solution ensures security and privacy by limiting the permissions to email management only, while keeping the executive's account secure. The executive administrator will be able to send, read, and delete emails on behalf of the executive, but they won't have access to other aspects of the account.

NEW QUESTION # 79

Your organization recently deployed Google Workspace. Over 3,000 external contacts were shared in public folders in Microsoft Exchange before the implementation. You need to ensure that these external contacts appear to domain users in Gmail. What should you do?

- A. Use Google Cloud Directory Sync to sync the external contacts from the public folders in Microsoft Exchange to the Directory.
- B. Export the external contacts to a CSV file, upload the file to Google Drive, and instruct users to import to their My Contacts.
- C. Create a user account, add the external contacts, and delegate them to all users in the domain.
- **D. Use the Domain Shared Contacts API to add the external contacts to the Directory.**

Answer: D

Explanation:

The Domain Shared Contacts API allows you to add external contacts to the Google Workspace directory, making them available to all users in the domain. This is the most effective and scalable solution for adding a large number of external contacts (like the 3,000 from Microsoft Exchange) to your Google Workspace environment. Once the contacts are added to the directory, they will be accessible to all users in Gmail and other Google Workspace apps.

NEW QUESTION # 80
