NEW QUESTION # 337

When deploying a Cisco HyperFlex edge with a pair of switches, what is the minimum number of interfaces in trunk mode required on each HX node?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

NEW QUESTION # 338

An engineer implements an environment with multiple traffic types on a consolidated I/O link between Cisco Nexus 9000 Series Switch and MDS 9000 Series Switch. The configuration must meet these requirements:

- * The unified I/O link must support LAN and SAN traffic.
- * A single, multipurpose Ethernet transport must be used.
- * The configuration must discard MAC addresses that are not part of the current fabric.
- * The QoS markings must be preserved.

Which configuration set meets the requirements?

- A. Option D
- **B. Option A**
- C. Option C
- D. Option B

Answer: B

NEW QUESTION # 339

Port security is statically configured on a Cisco Nexus 7700 Series switch and F3 line card. The switch is configured with an Advanced Services license. Which two actions delete secured MAC addresses from the interface? (Choose Two)

- **A. The interface must be converted to a routed port.**
- B. Shutdown and then no shutdown must be run on the interface.
- C. The device must be restarted manually.
- **D. The address must be removed from the configuration.**
- E. The address must reach the age limit that is configured for the interface.

Answer: A,D

Explanation:

NEW QUESTION # 340

An engineer must automate the provisioning of Cisco ACI objects using the Terraform tool. The engineer must ensure that APIC counts the authentication login requests against the threshold to avoid a DOS attack. Which configuration must be used in Terraform to accomplish these goals?

- A. resources with signature-based authentication
- **B. provider with signature-based authentication**
- C. provider with user ID and password
- D. resources with user ID and password

Answer: B

Explanation:

To automate the provisioning of Cisco ACI objects using Terraform while ensuring that APIC counts the authentication login requests against the threshold to avoid a DOS attack, signature-based authentication should be used. This method involves obtaining an authentication token from Cisco APIC, which will use the token to authenticate. However, APIC counts these authentication requests and applies a threshold to prevent DOS attacks. After too many attempts, the user ID and password authentication method may fail as the threshold is exceeded. To circumvent this issue, signature-based authentication is recommended, where a signature is calculated using a private key and passed with the request. This signature is then used to authenticate the user without being counted against the threshold, thus avoiding the risk of exceeding it and failing authentication.

References: The information is based on the Terraform documentation provided by CiscoDevNet

NEW QUESTION # 341

.....

We truly treat our customers with the best quality service and the most comprehensive 350-601 exam pdf, that's why we enjoy great popularity among most IT workers. When you want to learn something about the 350-601 Online Training, our customer assisting will be available for you. We will offer you the best preparation materials regarding 350-601 practice exam. You can totally trust our dumps and service.
