## New Exam Mule-Dev-202 Syllabus 100% Pass | High Pass-Rate Mule-Dev-202: Salesforce Certified MuleSoft Hyperautomation Developer 100% Pass

According to the needs of all people, the experts and professors in our company designed three different versions of the Mule-Dev-202 certification training materials for all customers. The three versions are very flexible for all customers to operate. According to your actual need, you can choose the version for yourself which is most suitable for you to preparing for the coming exam. All the Mule-Dev-202 Training Materials of our company can be found in the three versions. It is very flexible for you to use the three versions of the Mule-Dev-202 latest questions to preparing for your coming exam.

## Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q52-Q57):

### NEW QUESTION # 52

Northern Trail Outfitters developed an integration between its two Salesforce orgs using MuleSoft Composer. Which two actions should be taken before testing the Composer flow? (Choose two.)

- A. Ensure the credentials to the target production org are still valid.
- B. Ensure MuleSoft Composer is installed on both the source and target orgs.
- C. Ensure the flow trigger is connected to a sandbox instance of Salesforce.
- D. Ensure action steps are connected to a sandbox instance of Salesforce.

Answer: C,D

### NEW QUESTION # 53

An employee at AnyAirlines uses RPA Recorder to capture actions performed when carrying out a business process automation. How does this help expedite RPA process development?

- A. BPMN is autogenerated, which includes documentation in the form of images and a complete recording of keyboard actions and wait times.
- B. BPMN is autogenerated, including documentation in the form of images and a fully functional RPA process with workflows and conditional branching.
- C. BPMN is autogenerated with complete test plans and run configurations that can be executed in the test and production phases.
- D. BPMN is autogenerated with documentation and workflows containing the recorded actions that are automatically created during the build phase.

**Answer: A**

Explanation:

Using RPA Recorder to capture actions performed during a business process automation helps expedite RPA process development in the following way:

Autogenerating BPMN:

The RPA Recorder captures the business process as it is performed and autogenerates a Business Process Model and Notation (BPMN) diagram. This diagram includes a visual representation of the process, making it easier to understand and modify.

Detailed Documentation:

Along with the BPMN, the recorder generates detailed documentation that includes images of the steps performed, as well as a complete recording of keyboard actions and wait times. This provides a comprehensive view of the process, which can be reviewed and refined.

Expediting Development:

By automating the creation of BPMN and detailed documentation, the RPA Recorder significantly reduces the time required to document and design the RPA process manually. This allows developers to focus on refining and optimizing the process rather than starting from scratch.

#### NEW QUESTION # 54

AnyAirlines wants to create a new marketing campaign that sends customers special offers every month based on their accrued loyalty points. There is an existing integration for customer data using MuleSoft's API-led three-tier strategy. Loyalty information exists in an external system that can be accessed via an HTTP endpoint provided by the system, but has no current integration. The external ID used will be email address.

The desired output is a CSV file containing customers that includes only the top 10 percent of loyalty point holders.

What is the most efficient way to meet this requirement?

- A. 1. Create a MuleSoft Composer flow that utilizes the current Customer integration to select all customers.2. Create an additional MuleSoft Composer flow that retrieves all the Loyalty information.3. Create a MuleSoft Composer flow that combines the two previous results and outputs the top 10 percent to a CSV file.
- B. 1. Have the MuleSoft team develop a new integration that includes a new System API to both the Customer and Loyalty systems.2. Create a Process API to output the final results.3. Create an Experience API for the business consumers to initiate the integration.
- C. 1. Have the MuleSoft team develop a new integration that includes a System API to the Loyalty system and uses the existing Customer System API.2. Create a Process API to output the final results.3. Create an Experience API for the business consumers to initiate the integration.
- D. 1. Create a Salesforce Flow that retrieves the Contact data.2. Create a Salesforce Flow that retrieves the Loyalty data.3. Create a Flow Orchestration that uses the two flows and outputs the result to a CSV file.

**Answer: C**

Explanation:

Develop System API for Loyalty System:The first step is to develop a new System API that integrates with the Loyalty system. This API will handle communication with the external system via the provided HTTP endpoint.

Reference:MuleSoft API-led Connectivity

Utilize Existing Customer System API:Use the existing System API for customer data to retrieve necessary customer information.

Combining these APIs ensures a modular approach and reuse of existing assets.

Reference:API-led Connectivity

Create Process API: Develop a Process API that combines data from both the Customer and Loyalty System APIs. This API will process the data, apply business logic to filter the top 10 percent of loyalty point holders, and format the results.

Reference: Designing Process APIs

Create Experience API: Develop an Experience API to serve the business consumers. This API will provide a user-friendly interface for initiating the integration and retrieving the results as a CSV file.

Reference: API Experience Layer

### NEW QUESTION # 55

Northern Trail Outfitters needs to develop an application network that follows a MuleSoft-recommended, API-led connectivity approach and meets the following requirements:

provides data to mobile and web interfaces

aggregates and transforms data

retrieves data from databases

In which API tier should the data aggregation and transformation take place?

- A. Business
- **B. Process**
- C. Experience
- D. System

**Answer: B**

Explanation:

API-led Connectivity: MuleSoft's API-led connectivity approach divides APIs into three tiers: System, Process, and Experience. Each tier has a specific role in managing data and operations.

Reference: MuleSoft API-led Connectivity

Experience APIs: These APIs are designed to provide data to end-user interfaces, such as mobile and web applications. They typically format the data in a way that is easy for the user interface to consume.

Reference: Experience API Definition

Process APIs: Process APIs are responsible for orchestrating and executing business logic. They aggregate, transform, and process data from multiple sources before passing it to Experience APIs or other downstream systems.

Reference: Process API Role

System APIs: These APIs provide direct access to core systems and data sources. They handle CRUD (Create, Read, Update, Delete) operations and expose data from underlying systems.

Reference: System API Role

Data Aggregation and Transformation: Given the requirements to aggregate and transform data, the Process tier is the appropriate place. Process APIs handle complex business logic and data transformation, making them ideal for aggregating data from multiple sources and transforming it as needed.

Reference: Process APIs and Data Transformation

### NEW QUESTION # 56

Northern Trail Outfitters develops an API to look up manufacturer rebates. This API will be consumed internally by the website's backend and the RPA bots used by its customer service representatives.

How should this API be shared within the organization?

- A. The API's RAML specification should be stored in a SharePoint repository.
- B. The API asset should be published to the public Exchange portal.
- C. Example assets should be published to the private Exchange.
- **D. The API asset should be published to the private Exchange portal.**

**Answer: D**

Explanation:

To effectively share an API internally within an organization, publishing the API asset to the private Exchange portal is the best approach:

Private Exchange Portal:

The private Exchange portal within MuleSoft Anypoint Platform is designed for sharing APIs, connectors, templates, and other assets within an organization. It provides a central repository that is accessible to all relevant teams and departments.

Access Control and Security:

By using the private Exchange, you can control access to the API, ensuring that only authorized internal users, such as the website's backend team and customer service representatives using RPA bots, can consume it.

Ease of Use:

Publishing to the private Exchange makes it easy for internal teams to discover, access, and reuse the API, promoting consistency and reducing duplication of effort.
