Valid Plat-Admn-202 Test Pattern & Valid Plat-Admn-202 Test Simulator

Our desktop software Salesforce Plat-Admn-202 practice exam software provides a simulated scenario in which you may pick the Salesforce Plat-Admn-202 exam questions and schedule them to replicate an actual Salesforce exam-like situation. With each attempt of the Salesforce Plat-Admn-202 Practice Exam in this manner, your score is saved.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
Topic 1	• Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
Topic 2	• App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.

Topic 3	• Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.
Topic 4	• Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
Topic 5	• User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.

Valid Plat-Admn-202 Test Simulator & New Exam Plat-Admn-202 Braindumps

Our experts have prepared Salesforce Salesforce Certified Platform App Builder dumps questions that will eliminate your chances of failing the exam. We are conscious of the fact that most of the candidates have a tight schedule which makes it tough to prepare for the Salesforce Certified Platform App Builder exam preparation. Pass4sures provides you Plat-Admn-202 Exam Questions in 3 different formats to open up your study options and suit your preparation tempo.

Salesforce Certified Platform App Builder Sample Questions (Q177-Q182):

NEW QUESTION # 177
Universal Containers wants to streamline its data capture process by linking fields together. They wish to do this so that the available value on dependents fields are driven by value selected on controlling fields. Which consideration supports the stated requirements? Choose 3 answers

- A. Standard and custom picklist fields can be dependent fields.
- B. Multi select picklist can be dependent picklist but not controlling fields
- C. The import wizard only allows value to be imported into a dependent picklist if they match the appropriate controlling field
- D. Custom picklist field can be either controlling or dependent field
- E. Checkbox fields can be controlling fields but not dependent fields

Answer: C,D,E

Explanation:
The import wizard only allows values to be imported into a dependent picklist if they match the appropriate controlling field. This ensures data integrity and prevents invalid values from being imported. Custom picklist fields can be either controlling or dependent fields. This allows the app builder to create custom dependencies between custom picklists. Checkbox fields can be controlling fields but not dependent fields. This allows the app builder to create dependencies based on checkbox values, such as true or false. Multi-select picklist fields can be dependent picklist fields but not controlling fields. This allows the app builder to create dependencies based on multiple values selected in a multi-select picklist field. Standard and custom picklist fields can be dependent fields, but not all standard picklist fields can be controlling fields. Some standard picklist fields, such as Lead Status or Opportunity Stage, cannot

be controlling fields because they are used in other processes, such as lead conversion or sales path

NEW QUESTION # 178
Cloud Kicks wants to know the total value of all won Opportunities for Accounts and display it on the record.
What type of summary should the app builder use in the roll-up summary field?

- A. Count
- B. Sum
- C. Q Max
- D. Min

Answer: B

Explanation:
The app builder should use Sum as the type of summary in the roll-up summary field. A Sum type of summary allows the app builder to calculate the total value of a numeric field from the child records related to a parent record by a master-detail relationship. The app builder can create a roll-up summary field on the Account object that sums the Amount field from the won Opportunities related to each Account. Count is not a valid type of summary, as it does not calculate the total value of a numeric field. A Count type of summary allows the app builder to count the number of child records related to a parent record by a master-detail relationship. Max is not a valid type of summary, as it does not calculate the total value of a numeric field. A Max type of summary allows the app builder to display the largest value of a numeric or date field from the child records related to a parent record by a master-detail relationship. Min is not a valid type of summary, as it does not calculate the total value of a numeric field. A Min type of summary allows the app builder to display the smallest value of a numeric or date field from the child records related to a parent record by a master-detail relationship.

NEW QUESTION # 179
At Universal containers, all US Sales reps should be able to view the US Team dashboard, however, only the US sales directors should be able to see the data in the component and view its source report. How can an app builder ensure the proper access is granted?

- A. Share the dashboard folder with roles and subordinates of the US Sales Director and share the report folder with the role of US Sales Director
- B. Share the dashboard with the public group US Sales Reps and share the dashboard source reports folder with the US Sales Director profile
- C. Make the US Sales Director the running user and share the dashboard folder with the role US Sales Rep
- D. Make the dashboard dynamic and give US Sales Reps the view my teams dashboard permission

Answer: A

Explanation:
Sharing the dashboard folder with roles and subordinates of the US Sales Director and sharing the report folder with the role of US Sales Director will ensure that only the US sales directors can see the data in the component and view its source report, while all US sales reps can view the US Team dashboard. Making the US Sales Director the running user will show only his or her data in the component, not the whole team's data. Making the dashboard dynamic will show different data depending on who is viewing it, not based on their role. Sharing the dashboard with the public group US Sales Reps and sharing the dashboard source reports folder with the US Sales Director profile will not prevent other profiles from accessing the reports if they have access to the report folder.

NEW QUESTION # 180
The Recruiting ream at AW Computing captures the job acceptance and date of hire of a candidate on the Job Application custom object. Once the candidate accepts the recruiter s job offer, the date of hire should be entered and not be changed on subsequent cecord edit.
Which validation formula should the app builder use?

- A. NOT{IS&lANK(Job_Accepted_c)) II ISCHANGED(Hire_Date_c)
- B. (ISBLANK(Job_Accepted_c) II NOT(lSCMANGED(Mire_Daie_c))
- C. NOT(ISCLANK(Job_Accepted_c)) && ISCHANGED(Hire_Date_c)
- D. (ISBLANK(Job_Accepted_c) && NOT(lSCHANGED(Hire_Date_c))

Answer: C

Explanation:
NOT(ISBLANK(Job_Accepted__c)) && ISCHANGED(Hire_Date__c) is the validation formula that the app builder should use to meet the requirement of preventing changes to Hire Date after Job Accepted is entered. This formula will return TRUE if Job Accepted is not blank and Hire Date is changed, which will display an error message and prevent saving the record. The other formulas are not correct or valid.

NEW QUESTION # 181
Which three options art availably when activating a Lightning page from the Lightning App Builder?
Choose 3 answers

- A. Assign the page to a combination of apps and profiles.
- B. Make the page the default homepage for specific roles.
- C. Make the page the org default.
- D. Assign the page to a combination of apps and permission sets.
- E. Make the page the default homepage for specific apps.

Answer: A,C,E

Explanation:
When activating a Lightning page from the Lightning App Builder, three options are available:
Assign the page to a combination of apps and profiles. This option allows users to specify which apps and profiles will see the custom Lightning page instead of the default page.
Make the page the org default. This option makes the custom Lightning page the default for all users in the org regardless of their app or profile.
Make the page the default homepage for specific apps. This option allows users to set different homepages for different apps in Lightning Experience. [Source]
