Latest Test C-CPI-2506 Discount & Reliable C-CPI-2506 Braindumps Sheet

If you are not sure whether our C-CPI-2506 exam braindumps are suitable for you, you can request to use our trial version. Of course, C-CPI-2506 learning materials produced several versions of the product to meet the requirements of different users. You can also ask to try more than one version and choose the one that suits you best. And we have three different versions Of our C-CPI-2506 Study Guide: the PDF, the Software and the APP online.

SAP Certified Associate - Integration Developer Sample Questions (Q23-Q28):

NEW QUESTION # 23

Where can you configure a static payload? Note: There are 2 correct answers to this question.

- A. In a Data Store Operation component
- B. In a Content Modifier component of the Message Body tab
- C. In a Groovy script
- D. In a Content Modifier component of the Message Header tab

Answer: A,B

Explanation:

You can configure a static payload in a Data Store Operation component or in a Content Modifier component of the Message Body tab. A Data Store Operation component allows you to store or retrieve messages in a data store. You can use the Write operation to store a static payload in a data store entry with a specified key. A Content Modifier component allows you to modify the message content, headers, and properties. You can use the Message Body tab to define a static payload for the message. NEW QUESTION # 24

What does the "Open Integration" principle of the SAP Integration Suite mean?

- A. SAP Integration Suite by default supports integrations to other SAP software.
- B. SAP Integration Suite allows SAP-to-SAP integrations.
- C. SAP Integration Suite by default supports third-party software integration.

Answer: C

Explanation:

The "Open Integration" principle of SAP Integration Suite emphasizes openness beyond SAP-to-SAP integrations. SAP provides pre-built content and adapters for SAP solutions (S/4HANA, SuccessFactors, Ariba, Concur, etc.). Additionally, it supports third-party applications and ecosystems through: Open Connectors (over 160+ third-party apps like Salesforce, HubSpot, Workday). Open APIs and standards (REST, OData, SOAP, JMS, AMQP, etc.). Thus, the principle ensures SAP + non-SAP integration scenarios are fully supported by default.

NEW QUESTION # 25

What kind of editor can you use to manipulate integration flows?

- A. Command-line editor

- B. Code editor
- **C. Graphical editor**

Answer: C

Explanation:

In SAP Cloud Integration, integration flows are manipulated using a web-based graphical editor:

Allows drag-and-drop of adapters, mappings, scripts, and process steps.

Provides visual orchestration of message flows.

Command-line and raw code editors are not supported for iFlow design (though XML behind the iFlow exists, it is not directly edited by developers).

Thus, the editor is the Graphical editor.

NEW QUESTION # 26

Which SAP Integration Suite component delivers the Cloud Event to the "emis-s4hana-uc123" message queue?

- A. Process Integration
- **B. Event Mesh**
- C. API Management
- D. Open Connector

Answer: B

Explanation:

In SAP Integration Suite, the component responsible for delivering Cloud Events to message queues is Event Mesh.

Event Mesh handles event-driven communication and manages message queues like emis-s4hana-uc123.

Process Integration (PI/PO) is on-premise middleware, not part of Integration Suite cloud services.

API Management handles APIs, not messaging events.

Open Connectors provides connectivity to third-party SaaS apps, not queue management.

Thus, the Cloud Event is delivered to the message queue via Event Mesh.

NEW QUESTION # 27

What does the messaging model of the Apache Camel Data Model consist of?

- A. Header, Exchange ID, in-message
- B. Header, body, attachment
- C. Header, properties, attachment
- **D. Header, body, properties**

Answer: D

Explanation:

The Apache Camel Data Model, which underpins SAP Cloud Integration's message processing model, consists of

Header # Metadata about the message (e.g., content type, correlation IDs).

Body # Main payload of the message.

Properties # Exchange-level metadata, persisted throughout processing but not transferred with the message.

Other options mix in elements like attachments or exchange IDs, but the standard messaging model is header, body, properties.

NEW QUESTION # 28

.....

In this way, you can achieve your career objectives. Before this, you have to pass the SAP C-CPI-2506 exam which is not an easy task. The C-CPI-2506 certification exam is a difficult and competitive exam that always gives a tough time to C-CPI-2506 Exam holders. However, with the assistance of C-CPI-2506 Questions, you can prepare well and later on pass the SAP C-CPI-2506 exam easily.
