

Juniper JN0-105資格トレーニング、JN0-105問題と解答

さらに、It-Passports JN0-105ダンプの一部が現在無料で提供されています: https://drive.google.com/open?id=17HnRl6cGs1bK_EzUo5JdDasx422TE9zr

研究により、学習への関心を刺激することが最善の解決策であることがわかっています。したがって、JN0-105準備ガイドの焦点は、JN0-105試験の準備方法を変更することにより、厳格で無駄なメモリモードを改革することです。JN0-105実践教材のソフトバージョンは、知識と最新テクノロジーを組み合わせることで学習力を大幅に刺激します。楽しい学習シーンと鮮明な説明をシミュレートすることにより、ユーザーは資格のあるJN0-105試験に合格する自信が大きくなります。

Juniper JN0-105 認定試験の出題範囲:

トピック	出題範囲
トピック 1	Operational Monitoring and Maintenance: Different methods of monitoring or maintaining Junos devices are identified in this topic. Lastly, it discusses monitoring or maintenance procedures for a Junos device.
トピック 2	Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.
トピック 3	User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.
トピック 4	Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device

試験の準備方法-一番優秀なJN0-105資格トレーニング試験-素敵なJN0-105問題と解答

弊社It-PassportsでのJuniperのJN0-105問題集を購入する予定のあるお客様は何の質問があれば、ライブチャットといい、メールといい、我々の社員は待っていて質問を回復します。当然、購入した後、あなたはどんな疑問

があると、次々に丁寧に返答できます。あなたの送信を歓迎しております。あなたに行き届いたサービスを提供できるのは我々の幸いです。

Juniper Junos, Associate (JNCIA-Junos) 認定 JN0-105 試験問題 (Q15-Q20):

質問 # 15

Click the Exhibit button.

Referring to the exhibit, OSPF has three export policies that match different static route prefixes. The 10.10.10.0/24 static route does not match any terms in the policy1 routing policy.

What happens next in this scenario?

- A. The static route is rejected by the policy1 routing policy.
- B. The static route is evaluated by the policy3 routing policy.
- C. The static route is rejected by the default routing policy.
- D. The static route is evaluated by the policy2 routing policy.

正解: D

解説:

In Junos, when multiple policies are applied to a routing protocol for route export, the routes are evaluated in the order in which the policies are listed. In the exhibit, the OSPF configuration has three export policies listed: policy1, policy2, and policy3. The static route 10.10.10.0/24 does not match any terms in policy1; therefore, it is not rejected by policy1 but is instead passed on to the next policy in the sequence, which is policy2.

If the static route matches a term in policy2 that permits the route, it will be exported into OSPF. If it does not match in policy2, it will then be evaluated by policy3. If there is no match in policy3 as well, and assuming there are no more policies listed, the route would then be subject to the default routing policy behavior, which typically rejects the route unless an explicit accept statement is present in the policies.

質問 # 16

What are two link-state routing protocols? (Choose two.)

- A. BGP
- B. OSPF
- C. IS-IS
- D. RIP

正解: B、C

解説:

Link-state routing protocols are a type of routing protocol used in packet-switching networks for finding the best path between source and destination. OSPF (Open Shortest Path First) and IS-IS (Intermediate System to Intermediate System) are both examples of link-state routing protocols. They work by maintaining a complete map or topology of the network, allowing routers to independently calculate the best path to each destination.

Unlike distance-vector protocols like RIP, link-state protocols are more efficient and scalable, making them suitable for larger networks.

質問 # 17

You are asked to configure your device running Junos OS to automatically archive your configuration upon commit. In this scenario, which two methods are supported by the Junos OS? (Choose two)

- A. HTTP
- B. RCP
- C. SCP
- D. FTP

正解: B、C

解説:

Junos OS supports multiple methods for automatically archiving configurations upon commit. Two of the supported methods are SCP (Secure Copy Protocol) and RCP (Remote Copy Protocol). These methods can be configured to save the configuration files to a remote server automatically whenever a commit is made.

Reference: Juniper Networks Documentation on Configuration Archival

"You can configure Junos OS to automatically archive the configuration using protocols such as SCP and RCP upon commit."

質問 # 18

You want to find out the chassis serial number of a Junos device. Which command would display this information?

- A. show chassis hardware
- B. show chassis routing-engine
- C. show chassis location
- D. show chassis environment

正解: A

解説:

The `show chassis hardware` command in Junos OS displays detailed information about the hardware installed in the device, including the chassis itself. This command provides a list of all hardware components, their serial numbers, part numbers, and version information. When looking for the chassis serial number specifically, this command is the most direct and comprehensive way to retrieve that information, as it includes the serial number of the chassis among the details provided.

質問 # 19

You are logged in to a Junos OS device with SSH and issued the `show protocols | compare` command in the configuration, but no output is shown.

Which statement is correct in this scenario?

- A. Someone accidentally deleted the active configuration.
- B. The command only works for interface configuration differences.
- C. There are no changes to the candidate configuration.
- D. You must commit the configuration before any output will be shown.

正解: C

解説:

If issuing the `"show | compare"` command in configuration mode yields no output, it indicates that there are no changes to the candidate configuration (B). This command is used to compare the current candidate configuration with the active configuration, and a lack of output suggests that the candidate configuration matches the active one, meaning no changes have been made or the changes have already been committed.
