You may face many choices of attending the certificate exams and there are a variety of certificates for you to get. You want to get the most practical and useful certificate which can reflect your ability in some area. If you choose to attend the test 220-1101 certification buying our 220-1101 exam guide can help you pass the 220-1101 test and get the valuable certificate. Our company has invested a lot of personnel, technology and capitals on our products and is always committed to provide the top-ranking 220-1101 study material to the clients and serve for the client wholeheartedly.

Preparing for the CompTIA 220-1101 certification exam requires a combination of hands-on experience, study materials, and practice exams. Candidates can take advantage of various study resources, including online courses, practice exams, study guides, and videos, to prepare for the exam. Candidates should also have hands-on experience with technology as this will help them understand the exam topics better.

The Core 1 exam covers topics such as mobile devices, networking technology, hardware, virtualization and cloud computing, and troubleshooting. 220-1101 Exam consists of 90 multiple-choice questions and is timed at 90 minutes. To pass the exam, an individual must score a minimum of 675 on a scale of 100-900.

## CompTIA A+ Certification Exam: Core 1 Sample Questions (Q514-Q519):

### NEW QUESTION # 514

A technician installs a new printer for a workstation and tries to print a test page, but the page does not print. The technician looks at the print queue and notices that the printer is called 'Generic Printer.' Which of the following BEST describes what the technician should do to fix this issue?

- A. Connect the printer with a USB cable rather than over the network.
- B. Install the correct toner in the printer.
- C. Set the printer trays to allow duplex printing.
- D. Install the appropriate printer drivers for the OS.

**Answer: D**

Explanation:

The technician should install the appropriate printer drivers for the OS to enable the computer to communicate with the printer. The generic printer name suggests that the drivers are missing or not installed correctly.

### NEW QUESTION # 515

A customer built a computer for gaming, sourcing individual components and then assembling the system.

The OS starts up, but within a few minutes the machine locks up. The customer brought the computer to a technician to diagnose the issue.

**Answer:**

Explanation:

Explanation:

correct answer is "Overclocking" and "Reduce CPU Clock speed" CPU is at 4.5 Ghz when normal is 3.2 Ghz.

Overclocking too much can cause freezes, and this is a gaming computer so the user probably took it too far.

#### NEW QUESTION # 516

A user added a heater underneath a desk, now an external monitor not working. A technician wanted the monitor gets power. Which of the following should the technician do next?

- A. Have the user unplug the heater
- **B. Ensure a VGA cable is connected properly**
- C. Replace the monitor.
- D. Open the display settings on the computer

**Answer: B**

Explanation:

The technician should ensure that a VGA cable is connected properly between the monitor and the computer. A VGA cable is a type of video cable that carries analog signals. If the cable is loose, damaged, or not plugged in correctly, it can cause the monitor to not display any image or show distorted colors.

#### NEW QUESTION # 517

A user is connecting to a network via a Bluetooth hot-spot. Which of the following best describes this type of network?

- A. LAN
- B. WAN
- C. SAN
- **D. PAN**

**Answer: D**

Explanation:

Explanation

The correct answer is D. PAN.

A PAN, or Personal Area Network, is a type of network that connects devices within a short range, usually less than 10 meters, and is used by an individual. A PAN can be wireless or wired, and it can enable data transmission between devices without requiring an internet connection. A PAN can also be connected to a LAN or a higher level network, where one device acts as a gateway.

A Bluetooth hotspot is an example of a wireless PAN, where a device such as a smartphone or a laptop can create a network with other Bluetooth-enabled devices nearby. A Bluetooth hotspot can allow devices to share files, access the internet, or use peripherals such as printers or speakers.

A SAN, or Storage Area Network, is a type of network that connects storage devices such as hard disks, tape drives, or optical drives to servers. A SAN provides high-speed data transfer and access to large amounts of data. A SAN is usually used in data centers or enterprises that need to store and manage huge volumes of data.

A WAN, or Wide Area Network, is a type of network that connects devices over a large geographical area, such as across cities, countries, or continents. A WAN can use different technologies and media to transmit data, such as fiber-optic cables, satellite links, or radio waves. A WAN can also consist of multiple LANs or other types of networks. The internet is the largest example of a WAN.

A LAN, or Local Area Network, is a type of network that connects devices within a limited area, such as within a building or a campus. A LAN can use wired or wireless technologies to transmit data, such as Ethernet cables, Wi-Fi routers, or switches. A LAN can enable devices to share resources, such as printers, scanners, or files.

For more information about the types of networks and their differences, you can refer to the following web search results: 11 Types of Networks: Understanding the Differences, Types of Computer Networks, Types of network - Introduction to networks.

### NEW QUESTION # 518

A user is expecting a visit from a new customer, and the company's ADSL link has suddenly gone down. Which of the following should the user do to access a smartphone's 4G internet connection from the laptop?

- A. Use a USB cable.
- B. Activate NFC.
- C. Configure a hotspot.
- D. Set up a VPN.

Answer: C

### NEW QUESTION # 519
