WGU Practical Applications of Prompt QFO1 Sample Questions (Q36-Q41):

NEW QUESTION # 36
What is a risk associated with failing to include a goal when writing a prompt?

- A. Conflicting personas
- B. Blatant misinformation
- C. Nonsensical information
- D. Inaccurate responses

Answer: D

Explanation:
Failing to include a clear goal creates a significant risk of receiving inaccurate responses. In the context of AI, "inaccuracy" doesn't just mean a factual error; it also refers to an output that is "off-target" for the user's intent. Without a goal (the specific outcome the user wants to achieve), the AI is forced to make assumptions about what the user wants. These assumptions are often based on the most common patterns in its training data, which may not align with the user's actual needs.
For example, if a user provides context about a product but doesn't state the goal (e.g., "Write a product description," "Critique this product," or "Compare this product to X"), the AI might simply summarize the text provided. This response is "inaccurate" because it fails to fulfill the user's unspoken requirement. This lack of direction leads to a "hallucination of intent," where the AI provides a response that is technically coherent but practically useless. Clearly defining the goal is the most effective way to anchor the AI's logic, ensuring that the generated content is accurate in terms of both facts and function.

NEW QUESTION # 37
A lawyer needs to interact with a database to search for cases relating to college admissions. What is a benefit of writing effective prompts when interacting with the database?

- A. Data modification for improved applicability
- B. Automatic expansion to include more data
- C. Greater capacity for unstructured data storage
- D. Prevention of sifting through irrelevant results

Answer: D

Explanation:
For professionals dealing with vast amounts of specialized information, such as lawyers, the primary benefit of effective prompt engineering is the prevention of sifting through irrelevant results. Legal databases are massive, containing millions of precedents, statutes, and opinions. A vague prompt like "Find cases about schools" would return thousands of results, most of which would be useless to a specific case regarding college admissions.
By using specific keywords, Boolean logic, and contextual constraints within the prompt (e.g., "Search for U.
S. Supreme Court cases from 2000-2023 specifically addressing affirmative action in private university undergraduate admissions"), the lawyer drastically narrows the search field. This precision is the essence of effective prompting in a professional environment. It saves significant time and cognitive energy by ensuring that the AI or search algorithm acts as a high-resolution filter. This "signal-to-noise" optimization allows the professional to focus on the high-value task of legal analysis rather than the low-value task of manual data sorting. Effective prompts turn a mountain of data into a curated list of relevant evidence.

NEW QUESTION # 38
Which task can be accomplished with the data cleaning capabilities of generative AI?

- A. Identifying inaccuracies
- B. Reducing total volume
- C. Drawing valid conclusions
- D. Identifying underlying bias

Answer: A

Explanation:
Generative AI models, specifically Large Language Models (LLMs), are highly effective at Identifying inaccuracies within a dataset during the data cleaning phase. When provided with a dataset and a prompt to
"check for consistency" or "identify anomalies," the AI can cross-reference the data points against its internal knowledge base or the logical rules established in the prompt. For example, if a list of "US States" includes
"London," the AI can flag this as an inaccuracy.
This capability extends to identifying spelling errors, formatting inconsistencies (e.g., dates written in multiple formats), and logical contradictions. While AI can help in identifying bias (Option D), that is usually considered a higher-level "auditing" task rather than a standard "cleaning" task. Identifying inaccuracies is a foundational step in the data pipeline; by cleaning the data first, the user ensures that any subsequent analysis or "conclusion drawing" (Option C) is based on high-quality, reliable information. In prompt engineering, this is often performed using the "Self-Correction" or "Reviewer" pattern, where one prompt generates data and a second prompt is used specifically to identify and fix any factual or structural inaccuracies within that output.

NEW QUESTION # 39
A lawyer needs to interact with a database to search for cases relating to college admissions. What is a benefit of writing effective prompts when interacting with the database?

- A. Data modification for improved applicability
- B. Automatic expansion to include more data
- C. Greater capacity for unstructured data storage

NEW QUESTION # 40
How do generative AI interfaces enhance the experiences of users?

- A. They allow AI to understand user emotions.
- B. They give users access to ethical reasoning.
- C. They provide intuitive AI interactions.
- D. They provide users with information.

Answer: C

Explanation:
Generative AI interfaces, such as chat-based platforms, have revolutionized the user experience primarily by providing intuitive AI interactions. Before the rise of Large Language Models (LLMs), interacting with complex computer systems often required specialized knowledge, such as coding skills, specific command- line syntax, or navigating complex menus. Generative AI has lowered this barrier by allowing users to communicate with technology using natural language-the same way they would talk to another human.
This intuitiveness allows users to express complex goals, ask follow-up questions, and refine outputs iteratively without needing to understand the underlying technical architecture. The interface acts as a bridge that translates human intent into machine-executable tasks. By providing a conversational flow, these interfaces make technology more accessible to non-technical users, fostering a collaborative environment where the AI acts as a creative partner. While providing information is a function of the AI, it is the interface and the natural language processing (NLP) capabilities that make the interaction "intuitive." This shift from rigid

input/output systems to fluid, conversational exchanges is the hallmark of modern generative AI, significantly enhancing productivity and user engagement across various industries.
