

Juniper JN0-364 Dumps PDF Format

2026 Latest Exam PDF JN0-364 PDF Dumps and JN0-364 Exam Engine Free Share: <https://drive.google.com/open?id=1gFyBPHwHGTPco6YHwRqE3fV83DBMvSR0>

In today's highly competitive Juniper market, having the JN0-364 certification is essential to propel your career forward. To earn the Juniper JN0-364 certification, you must successfully pass the JN0-364 Exam. However, preparing for the Juniper JN0-364 exam can be challenging, with potential hurdles like exam anxiety and time constraints.

When choosing a product, you will be entangled. After you have made a variety of comparisons, I believe you will choose our JN0-364 learning quiz. We are so confident in our JN0-364 study materials because they have their own uniqueness. If you want to have a deeper understanding of our products before making a choice, you can download a trial version of JN0-364 Preparation materials which is a small part of the real questions and answers.

JN0-364 Latest Exam Experience & New JN0-364 Test Tips

Our study material is not same as other dumps or study tools, it not only has good quality but also has cheap price. We have most professional team to compiled and revise JN0-364 exam question, in order to try our best to help you pass the exam and get a better condition of your life and your work. Moreover, only need to spend 20-30 is it enough for you to grasp whole content of JN0-364 practice materials that you can pass the exam easily, this is simply unimaginable.

Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP) Sample Questions (Q78-Q83):

NEW QUESTION # 78

Exhibit:

```

[edit interfaces]
user@switch# show
xe-0/0/4 {
  unit 0 {
    family ethernet-switching {
      vlan {
        members 10;
      }
    }
  }
}

```

on a Juniper switch. It shows interface xe-0/0/4 with unit 0 and family ethernet-switching. Under vlan, it lists members 10;] Referring to the exhibit, which two statements are true? (Choose two.)

- A. The interface is a part of a VLAN that uses VLAN ID 10.
- **B. The interface is a member of the VLAN named 10.**
- C. The interface receives tagged traffic.
- **D. The interface receives untagged traffic.**

Answer: B,D

Explanation:

In Junos OS for switching platforms, an interface is configured for Layer 2 bridging under the family ethernet-switching hierarchy. The way an interface handles VLAN traffic depends on its port mode: access or trunk.

According to Juniper Networks technical documentation, when an interface is configured simply with members <vlan-name/id>, it defaults to an access port. In an access port configuration:

* The port is a member of only a single VLAN.

* The port receives and sends untagged traffic (Option C). Any untagged frame arriving at this interface is implicitly associated with the configured VLAN member.

* The interface does not expect or process 802.1Q tags in incoming frames.

In the exhibit, interface xe-0/0/4 has members 10;. In Junos, the members statement can reference either a VLAN name or a VLAN ID. However, when the configuration is shown as members 10; without further context of the specific ID mapping, the most precise interpretation of the CLI output provided is that the interface is a member of the VLAN named 10 (Option D). While "10" could be the numerical ID, Junos primarily maps members by their defined administrative name.

Why other options are incorrect:

* Option A: Access ports do not receive tagged traffic; only trunk ports (which require the port-mode trunk and vlan members [...] statements) are designed to process tagged frames.

* Option B: While the VLAN named 10 likely has a VLAN ID of 10, the exhibit does not explicitly confirm the ID mapping. In Junos, a VLAN named "10" could technically have a different tag ID (e.g., VLAN "Office" with ID 10). Option D is the more accurate direct reading of the displayed member configuration.

NEW QUESTION # 79

You are evaluating BGP between two Juniper routers and the BGP session is stuck in the Idle state. What would cause this behavior?

- A. The BGP hold time is too short.
- **B. The peer IP address is incorrect.**
- C. The local AS number is missing.
- D. The BGP group type is set to internal instead of external.

Answer: B

Explanation:

The Idle state indicates that the BGP process is waiting to initiate a connection but cannot establish a TCP session with the configured peer. If the peer IP address is incorrect, the router attempts to connect to a non-existent or wrong neighbor, preventing

the TCP session on port 179 from being established and keeping the BGP session in the Idle state.

NEW QUESTION # 80

Click the Exhibit button. Referring to the exhibit, why is the ge-0/0/0.0 interface shown as belonging to Level 3?

```
user@R1> show isis adjacency
```

Interface	System	Level	State	Hold (secs)	SNPA
ge-0/0/0.0	R2	3	Up	25	
ge-0/0/1.0	R6	2	Up	25	

- A. This interface connects to a super spine.
- B. This interface is configured as a point-to-point interface, that uses Level 3 as shorthand for both Level 1 and Level 2.
- C. This interface is configured as a broadcast interface that has three adjacencies with other routers on the shared LAN.
- D. This interface is configured as a broadcast interface, that uses Level 3 as shorthand for both Level 1 and Level 2.

Answer: B

Explanation:

In Junos IS-IS output, Level 3 indicates that the adjacency is operating for both Level 1 and Level

2. This shorthand appears for point-to-point interfaces where a single adjacency can simultaneously support both IS-IS levels between the routers.

NEW QUESTION # 81

Click the Exhibit button. All devices in the network are configured correctly and the path requirements are valid. Referring to the exhibit, which two statements are correct? (Choose two.)

```
[edit]
user@R1# show protocols mpls
label-switched-path R1-to-R6 {
  to 10.1.1.6;
  primary via-R2-R4;
  secondary any-path;
}
path via-R2-R4 {
  10.1.1.2 strict;
  10.1.1.4 strict;
}
path any-path;
interface ge-0/0/0.0;
interface ge-0/0/1.0;
```

- A. The primary LSP will not be signaled, and its state will be down.
- B. The secondary LSP will be signaled, and its state will be up.
- C. The primary LSP will be signaled, and its state will be up.
- D. The secondary LSP will not be signaled, and its state will be down.

Answer: B,C

Explanation:

According to the exhibit, the primary LSP is configured with a strict path via R2 to R4. Since the configuration shows valid next-hops and there is no indication of any issues, the primary LSP will be signaled and its state will be up. The secondary LSP with any-

path is also configured and will be signaled as a backup; therefore, its state will be up as well, ready to take over if the primary fails.

NEW QUESTION # 82

Referring to the exhibit, where should next-hop-self-policy be applied to alter the next-hop value?

```
[edit]
user@R1# show policy-options
policy-statement next-hop-self-policy {
  term alter-next-hop {
    then {
      next-hop self;
    }
  }
}
[edit]
user@R1# show protocols bgp
group int-64503 {
  type internal;
  local-address 192.168.100.1;
  neighbor 192.168.100.2;
}
group ext-64501 {
  type external;
  peer-AS 64501;
  neighbor 172.30.1.2;
```

- A. The policy is applied as an import policy for the group int-64503.
- B. The policy is applied as an export policy for the group int-64503.
- C. The policy is applied as an Import policy for the group ext-64501.
- **D. The policy is applied as an export policy for the group ext-64501.**

Answer: D

Explanation:

The next-hop-self-policy policy is used to alter the next-hop attribute of BGP routes. When you apply it as an export policy to an external BGP (eBGP) group, it changes the next-hop attribute of the routes being advertised to eBGP neighbors so that the next-hop IP address is the IP address of the router itself. This ensures that the eBGP neighbors use the local router as the next hop to reach these routes.

NEW QUESTION # 83

.....

Our company is a professional certificate exam materials provider, we have occupied the field for years, therefore we have rich experiences. JN0-364 training materials of us are compiled by skilled experts, and they are quite familiar with the exam center, and you can pass the exam just one time by using JN0-364 Exam Materials of us. In addition, we offer you free update for 365 days after purchasing, and the update version for JN0-364 training materials will be sent to your email automatically. We have online and offline chat service stuff, if you have any questions, just contact us.

JN0-364 Latest Exam Experience: <https://www.exam4pdf.com/JN0-364-dumps-torrent.html>

Are you still worrying about the high difficulty to pass Juniper certification JN0-364 exam, In addition to our JN0-364 exam questions, we also offer a Juniper Practice Test engine, Our JN0-364 test bank has a 100% hit rate, which guarantees that everyone who has used the MS-200 test bank will pass the exam, Juniper JN0-364 New Test Camp The good reputation inspires us to do better, which is the ultimate objections of us.
