NEW QUESTION # 47

An Adobe Commerce Developer is tasked to frequently send data to a third-party API. The API utilizes a JSON Web Token

(JWT) that expires every hour. The developer decides to store the JWT in a custom cache. Which step should the Developer take to implement this new custom cache type correctly?

- A. Define the custom cache type in cache.xml with a unique name and instance.
- B. Define the custom cache type directly in system.xml at the website level.
- C. Define the custom cache type in the di.xml, ensuring the cache model implements CacheInterface.

Answer: A

Explanation:

To create a custom cache type in Adobe Commerce:

Define the cache type in etc/cache.xml with a unique ID and class instance.

This ensures Magento recognizes the cache type and allows managing it with cache commands.

Option A is incorrect; DI configuration is not where cache types are defined.
