Fortinet FCP - FortiAnalyzer 7.4 Analyst Sample Questions (Q56-Q61):

NEW QUESTION # 56

What must you configure on FortiAnalyzer to upload a FortiAnalyzer report to a supported external server? (Choose two.)

- A. SFTP, FTP, or SCP server
- B. Output profile
- C. Report scheduling
- D. Mail server

Answer: A,B

NEW QUESTION # 57

Which two statements about log forwarding are true? (Choose two.)

- A. Logs are forwarded in real-time only.
- B. You can use aggregation mode only with another FortiAnalyzer.
- C. Forwarded logs cannot be filtered to match specific criteria.
- D. The client retains a local copy of the logs after forwarding.

Answer: B,D

NEW QUESTION # 58

Which statement about SQL SELECT queries is true?

- A. They can be used to display the database schema.
- B. They can be used to purge log entries from the database.
- C. They are not used in macros.
- D. They must be followed immediately by a WHERE clause.

Answer: C

Explanation:

Option A - Purging Log Entries:

A SELECT query in SQL is used to retrieve data from a database and does not have the capability to delete or purge log entries. Purging logs typically requires a DELETE or TRUNCATE command.

Conclusion: Incorrect.

Option B - WHERE Clause Requirement:

In SQL, a SELECT query does not require a WHERE clause. The WHERE clause is optional and is used only when filtering results. A SELECT query can be executed without it, meaning this statement is false.

Conclusion: Incorrect.

Option C - Displaying Database Schema:

A SELECT query retrieves data from specified tables, but it is not used to display the structure or schema of the database. Commands like DESCRIBE, SHOW TABLES, or SHOW COLUMNS are typically used to view schema information.

Conclusion: Incorrect.

Option D - Usage in Macros:

FortiAnalyzer and similar systems often use macros for automated functions or specific query-based tasks. SELECT queries are typically not included in macros because macros focus on procedural or repetitive actions, rather than simple data retrieval.

Conclusion: Correct.

Conclusion:

Correct Answer: D. They are not used in macros.

This aligns with typical SQL usage and the specific functionalities of FortiAnalyzer.

Reference:

FortiAnalyzer 7.4.1 documentation on SQL queries, database operations, and macro usage.

NEW QUESTION # 59

Which connector type is enabled by default to be used in playbooks?

- A. FortiOS
- B. EMS
- C. Fabric
- D. Local connector

Answer: D

NEW QUESTION # 60

What is the purpose of running the command `diagnose sql status sqlreportd`?

- A. To identify the database log insertion status
- B. To list the current SQL processes running
- C. To view a list of scheduled reports
- D. To display the SQL query connections and hcache status

Answer: D

NEW QUESTION # 61

.....
