The Salesforce AP-219 exam questions simulate the actual exam pattern, allowing you to pass the Salesforce Order Management Administrator Accredited Professional certification exam the first time.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q106-Q111):

NEW QUESTION # 106

A customer orders two shirts and one jacket in B2C Commerce. The Order is ingested into Order Management. However, the

customer decides to cancel the order prior to fulfillment. What object is created and linked to the Order Summary?

- A. Change Order
- B. Cancel Order
- C. Suspend Order
- D. Return Order

Answer: A

NEW QUESTION # 107

An administrator has created a flow but during testing they encounter an unhandled fault error. Which three can the administrator do to get more details for debugging?

- A. Add an error node
- B. Add a Display Text component which includes `{! SFIow.FaultMessage}`
- C. Add a screen node
- D. Create a fault connector
- E. Create an errorconnector

Answer: B,D,E

Explanation:

Three things that the administrator can do to get more details for debugging when encountering an unhandled fault error are:

Create a fault connector. A fault connector is a special type of connector that handles errors that occur in a flow element, such as an assignment, a loop, or an action. A fault connector can route the flow to another element or end the flow with an error message.

Add a Display Text component which includes `{! SFIow.FaultMessage}`. A Display Text component is a screen component that displays text on a screen element in a flow. The `{! SFIow.FaultMessage}` is a system variable that contains information about the error that occurred in the flow, such as the element name, error type, and error message.

Create an error connector. An error connector is a special type of connector that handles errors that occur in a screen element, such as invalid user input or required fields being left blank. An error connector can route the flow to another screen element or end the flow with an error message.

NEW QUESTION # 108

When a new PaymentSummary is created, an email should be sent to the owner of the associated account and an approval after review should be required. What three steps should the administrator do to implement this functionality?

- A. Create a trigger flow when the payment summary is created with an email flow node
- B. Create a flow to send an email to the owner of the associated account when a payment summary is created
- C. Create an email template
- D. Create an email alert action
- E. Create an approval process on the Payment Summary object

Answer: C,D,E

Explanation:

Three steps that the administrator should do to implement this functionality are:

Create an email template. An email template is a reusable message that contains merge fields that are populated with data from records when the email is sent. The administrator can create an email template for the Payment Summary object that includes information such as the payment amount, date, status, etc.

Create an email alert action. An email alert action is a type of action that sends an email to one or more recipients when a flow executes. The administrator can create an email alert action that uses the email template created in the previous step and sends it to the owner of the associated account when a new Payment Summary is created.

Create an approval process on the Payment Summary object. An approval process is a way to automate the approval of records based on certain criteria and actions. The administrator can create an approval process on the Payment Summary object that requires an approval after review from a designated approver.

NEW QUESTION # 109

Which data type is the Status field on an Order Summary object?

- A. String
- **B. Picklist**
- C. Number
- D. Text

Answer: B

Explanation:

The Status field on an Order Summary object is a picklist data type. A picklist is a field that allows users to select one value from a predefined list of values. The Status field on an Order Summary object indicates the current state of the order, such as Draft, Activated, Completed, or Cancelled. The values for the Status field are defined in the OrderStatus picklist field on the Order object. Reference: Order Management Objects, [Picklist Fields]

NEW QUESTION # 110

An administrator is attempting to deploy a Change Set from a development org to a test org but the test org is not available in the list of target organizations. What are two reasons that could cause this issue?

- **A. The development org and test org are not associated with the same production org.**
- B. ChangeSets can only be deployed from a sandbox org to a production org, not another sandbox org.
- C. The components in the Change set could not be found within the test org
- **D. The development org has not been approved to upload Change Sets from within the test org**

Answer: A,D

Explanation:

Two reasons that could cause the issue of not being able to deploy a Change Set from a development org to a test org are:
The development org has not been approved to upload Change Sets from within the test org. To deploy ChangeSets between two sandbox orgs, the administrator needs to establish a deployment connection between them. A deployment connection allows one org to send outbound Change Sets and another org to receive inbound Change Sets. The administrator can create a deployment connection request from the development org and approve it from the test org.
The development org and test org are not associated with the same production org. To deploy Change Sets between two sandbox orgs, they must be linked to the same production org. A production org is an org that contains live data and business processes. A sandbox org is a copy of a production org that is used for development, testing, or training purposes. Sandbox orgs inherit the deployment connections of their source production orgs. Reference: Deploy Using Change Sets, Deploy a Change Set

NEW QUESTION # 111

.....

Our TrainingQuiz can help you realize your dream to pass AP-219 certification exam by providing AP-219 test training materials.
