PAP-001 Pass4sure & PAP-001 New Study Materials

Our PAP-001 real exam has three packages, which meets your different demands. They are PDF version, online test engine and windows software of the PAP-001 learning guide. The contents are all identical. But the displays are totally different and you may choose the right one according to your interest and hobbies. Every version of our PAP-001 Real Exam is worthy and affordable for you to purchase. Let us fight for our bright future. You are bound to win if you are persistent.

Ping Identity Certified Professional - PingAccess Sample Questions (Q59-Q64):

NEW QUESTION # 59
What is the purpose of the pa.operational.mode configuration setting?

- A. To determine if a cluster node is enabled or disabled
- B. To determine whether a server is a development or production server
- C. To determine the role the server performs in a cluster

- D. To determine if a server should participate in cluster replication

Answer: C

Explanation:
Thepa.operational.modeproperty inrun.propertiesdefines therole of the nodein a PingAccess deployment (e. g.,STANDALONE,CLUSTERED_CONSOLE,CLUSTERED_CONSOLE_REPLICA,ENGINE).
Exact Extract:
"Thepa.operational.modeproperty determines the role of the server in the cluster, such as standalone, console, console replica, or engine."
* Option Ais incorrect - replication is implicit in certain roles, not controlled directly.
* Option Bis correct - the setting specifies whether the node is admin console, replica, or engine.
* Option Cis incorrect - development vs production is not a function of this setting.
* Option Dis incorrect - it does not enable/disable nodes.
Reference:PingAccess Administration Guide -run.properties

NEW QUESTION # 60
PingAccess will terminate SSL for multiple proxied applications that share thecustomer.comURL domain.
The administrator needs different ways to minimize the number of SSL certificates to manage these user- facing applications.
What are two ways this requirement can be met? (Choose 2 answers.)

- A. Assign a wildcard certificate to the Agent Listener
- B. Assign a wildcard certificate to the Engine Listener
- C. Assign a Subject Alternative Name Certificate to the Engine Listener
- D. Assign a Subject Alternative Name Certificate to the Agent Listener
- E. Assign unique Key Pairs to each Virtual Host

Answer: B,C

Explanation:
PingAccess usesEngine Listenersfor SSL termination of proxied applications. To minimize the number of certificates, administrators can:
* Use awildcard certificate(e.g.,*.customer.com) on the engine listener.
* Use aSubject Alternative Name (SAN) certificatethat covers multiple FQDNs under thecustomer.
comdomain.
Exact Extract:
"PingAccess engine listeners can use certificates containing either wildcard entries or Subject Alternative Names to secure multiple applications under a single domain."
* Option Ais incorrect - assigning unique key pairs increases, not decreases, certificate management overhead.
* Option Bis correct - a wildcard certificate covers all subdomains (e.g.,app1.customer.com,app2.
customer.com).
* Option Cis correct - a SAN certificate lists multiple FQDNs explicitly.
* Option Dis incorrect - agent listeners don't handle SSL termination for proxied apps.
* Option Eis incorrect for the same reason - agent listeners aren't used for SSL.

NEW QUESTION # 61
A business requires logs to be written to a centralized Oracle database. Which two actions must the PingAccess administrator take to enable this? (Choose 2 answers.)

- A. Import the database certificate into the Trusted Certificate Group.
- B. Enable the Audit flag in the Resource.
- C. Remove the logs located in PA_HOME/log.
- D. Copy the database driver JAR file to the PA_HOME/lib directory.
- E. Configure log4j2.xml and log4j2.db.properties.

Answer: D,E

Explanation:

PingAccess supports logging directly to a relational database usingLog4j database appenders. To enable this:
* Configurelog4j2.xmlto use a JDBC Appender.
* Configurelog4j2.db.propertieswith the database connection information.
* Provide the appropriate database driver in thePA_HOME/libdirectory.
Exact Extract:
"To log to a database, configure log4j2.xml and log4j2.db.properties, and place the JDBC driver JAR file in PA_HOME/lib."
* Option Ais correct - both files must be configured.
* Option Bis incorrect - existing logs do not need removal.
* Option Cis incorrect - enabling audit is unrelated to database logging.
* Option Dis correct - the Oracle JDBC driver must be installed in PA_HOME/lib.
* Option Eis incorrect unless TLS is used to connect to the DB, but it is not required for standard DB logging setup.

NEW QUESTION # 62
An administrator needs to support SLO (Single Logout) for a protected web application. What must be configured in a PingAccess Web Session in this situation?

- A. Idle timeout
- B. Refresh User Attributes
- C. SLO scope
- D. Validate Session

Answer: C

Explanation:
To enableSingle Logout (SLO), theSLO scopemust be defined in the PingAccess Web Session configuration. This determines which sessions are ended when a logout request occurs.
Exact Extract:
"The SLO scope option in a web session specifies which applications are included in a logout event when Single Logout is triggered."
* Option A (SLO scope)is correct; it explicitly enables SLO support by linking session termination across apps.
* Option B (Idle timeout)is unrelated; this controls session expiration, not SLO.
* Option C (Validate Session)ensures session state is synchronized but does not configure SLO.
* Option D (Refresh User Attributes)is unrelated; it only controls whether attributes are reloaded.
Reference:PingAccess Administration Guide -Configuring Web Sessions

NEW QUESTION # 63
Any user who accesses an application must be insalesunless the user is amanager in the marketing department. The administrator creates the following web session rules:
* (A) Look for department = sales
* (B) Look for department = marketing
* (C) Look for job_title = manager
Which additional actions should be taken to properly enforce this requirement?

- A. Create a Rule Set (D) to accept ALL (A) # Create a Rule Set (E) to accept ANY (B) (C) # Create a Rule Set Group (F) to accept ALL (D) (E) # Add Rule Set Group (F) to the resource
- B. Create a Rule Set (D) to accept ANY (A) (B) (C) # Add Rule Set (D) to the resource
- C. Create a Rule Set (D) to accept ANY (A) # Create a Rule Set (E) to accept ALL (B) (C) # Create a Rule Set Group (F) to accept ANY (D) (E) # Add Rule Set Group (F) to the resource
- D. Create a Rule Set (D) to accept ALL (A) (B AND C) # Add Rule Set (D) to the resource

Answer: C

Explanation:
The requirement is:
* Allow access ifuser is in sales
* OR ifuser is in marketing AND is a manager
This is logically represented as:
(A) OR (B AND C)

To configure this in PingAccess:
* Rule Set (D) = ANY (A)
* Rule Set (E) = ALL (B, C)
* Rule Set Group (F) = ANY (D, E)
* Assign Group (F) to the resource
This exactly matchesOption D.
* Option Ais incorrect - requires both A and (B AND C), which is stricter than the requirement.
* Option Bis incorrect - ANY(A, B, C) would allow users in marketing or managers without requiring both.
* Option Cis incorrect - it uses ALL(D, E), which would require both conditions instead of OR.
* Option Dis correct - it models (A OR (B AND C)).
