NEW QUESTION # 31
What ate two reasons an admin should choose an Event over a Trigger when it comes to building out a solution?

- A. Event order is not guaranteed within a topic
- B. Events are asynchronous
- C. Events cannot be subscribed lo in a batch for bulk operations
- D. Events do not participate in a transaction scope

Answer: B,D

Explanation:
Explanation
Two reasons an admin should choose an Event over a Trigger when it comes to building out a solution are:
Events are asynchronous. This means that events are processed in the background, without blocking the main execution thread. This can improve the performance and user experience of the solution, as well as avoid governor limits and timeouts.
Events do not participate in a transaction scope. This means that events are independent of the transaction that publishes them, and they do not affect the rollback or commit behavior of the transaction. This can avoid unwanted side effects and errors in the solution, as well as decouple the logic from the data.

NEW QUESTION # 33

Which data type is the Status field on an Order Summary object?

- A. Text
- B. Picklist
- C. String
- D. Number

Answer: B

Explanation:
The Status field on an Order Summary object is a picklist data type. A picklist is a field that allows users to select one value from a predefined list of values. The Status field on an Order Summary object indicates the current state of the order, such as Draft, Activated, Completed, or Cancelled. The values for the Status field are defined in the Order Status picklist field on the Order object.

NEW QUESTION # 34

An administrator needs to import Order Summary records containing historical data but does not want them to be actioned on by Order Management. Which feature supports this use case?

- A. Unmanaged Order Checkbox
- B. Custom checkbox
- C. Order Management Type Picklist
- D. Order Life Cycle Type Picklist

Answer: A

Explanation:
The feature that supports this use case is the Unmanaged Order Checkbox. This is a standard field on the Order Summary object that indicates whether the order is managed by Order Management or not. If this field is checked, then the order is not actioned on by Order Management, and it does not trigger any flows or processes. The administrator can use this field to import Order Summary records containing historical data without affecting the order lifecycle.
