You plan to place an order for our Palo Alto Networks XSOAR-Engineer test questions answers; you should have a credit card. Mostly we just support credit card. If you just have debit card, you should apply a credit card or you can ask other friend to help you pay for XSOAR-Engineer Test Questions Answers.

Palo Alto Networks XSOAR-Engineer Exam Syllabus Topics:

Section	Weight	Objectives
Threat Intelligence Management	18%	- Threat intel and indicator management 1. Threat intelligence features 2. Indicator relationships 3. Indicator exclusions management 4. Indicator creation and configuration 5. External threat intel sharing 6. Indicator enrichment and reliability scoring
		- Automation and workflow design 1. Filters and transformers 2. Job creation and management 3. Playbook tasks (input/output/results) 4. Built-ins, commands, and scripts 5. Task types and flow control 6. Context data manipulation 7. Playbook debugger usage 8. Sub-playbooks (inputs/outputs/looping) 9. Automation script development (Python/JavaScript)
Playbook Development	30%	
Use Case Planning and Development	22%	- Incident and indicator lifecycle design 1. Playbooks, SLAs, and incident types 2. Fields and layouts configuration 3. List configuration and management 4. Incident creation methods 5. Preprocessing and postprocessing functions 6. Classifiers and mappers

		- Operational incident handling
Incident Interactions and Reporting	16%	• 1. Incident states and actions • 2. Incident relationships • 3. War Room operations • 4. Dashboards and reporting
		- System setup and administration
Planning, Installation, and Maintenance	14%	• 1. Dev/prod environment management • 2. System maintenance and troubleshooting • 3. Engine deployment planning • 4. Marketplace pack installation and updates • 5. Authentication and authorization configuration • 6. Integration instance configuration and troubleshooting

Palo Alto Networks XSOAR-Engineer Test Guide Online - XSOAR-Engineer Free Braindumps

A person's career prospects are often linked to his abilities, so an international and authoritative certificate is the best proof of one's ability. The XSOAR-Engineer exam certification is a proof of your IT ability. To pass this exam also needs a lot of preparation. The XSOAR-Engineer Exam Materials provided by TrainingDumps are collected and sorted out by experienced team. Now you can have these precious materials. You can safely buy a full set of XSOAR-Engineer exam software in our official website.

Palo Alto Networks XSOAR Engineer Sample Questions (Q125-Q130):

NEW QUESTION # 125

If a known malicious domain is no longer associated with a specific IP address, which action will make the association inactive?.

- **A. Revoke the relationship.**
- B. Update the indicator relationship description.
- C. Expire the IP address indicator.
- D. Update the relationship type.

Answer: A

Explanation:

XSOAR's Threat Intelligence module represents connections between indicators-such as domain # IP mappings-usingrelationships. The Admin Guide explains that relationships have attributes including direction, type, andstate, allowing analysts to mark them as active or inactive. When an observed association (such as a malicious domain pointing to a particular IP address) is no longer valid, the platform provides the ability to revoke the relationship, which sets its state to inactive without deleting the indicator or removing historical context.

Revoking is the correct method because it preserves historical intelligence for correlation, investigations, and audit trails while preventing outdated relationships from impacting enrichment or automated processes.

Updating the relationship type (option B) merely changes classification, not the state. Expiring the IP address indicator (option C) affects the indicator itself-not the relationship-and does not correctly mark that the specific association has ended. Updating the description (option D) is cosmetic only and does not change operational behavior.

Thus,revoking the relationship(option A) is the documented and proper way to inactivate a domain-IP connection in XSOAR.

NEW QUESTION # 126

How would context data be filtered to receive only malicious indicator values with DBotScore?

- A. Get DBotScore where DBotScore.Score (Larger or equals) 2
- B. Get DBotScore.value where DBotScore.Score (Larger or equals) 4
- **C. Get DBotScore.value where DBotScore.Score (equals (int)) 3**

- D. Get DBotScore where DBotScore.Score (Larger than) 1

Answer: C

Explanation:

NEW QUESTION # 127

After enriching a username using Active Directory, an engineer would like to send an email to the user's manager. However, this functionality is not part of the command output. The engineer checks with `raw-response=true` and notices that the manager's email is returned, but not saved in the context.

How can the engineer save the data so it will be accessible?

- A. Mark `ignore input = true`
- B. Use `raw-response = save`
- C. Use `extend-context`
- D. Mark `ignore output = true`

Answer: C

Explanation:

NEW QUESTION # 128

By default, which components does an XSOAR implementation include?

- A. Application server, distributed DB server, Backup server
- B. XSOAR server, XSOAR engine
- C. Application server, distributed DB server
- D. All in one server

Answer: C

Explanation:

Reference: <https://docs.paloaltonetworks.com/cortex/cortex-xsoar/6-0/cortex-xsoar-admin/installation/install-demisto-on-a-physical-or-virtual-server.html>

NEW QUESTION # 129

Within the playbook editor, which function allows a user to associate a task output to an incident field?

- A. Mapping.
- B. Extend context.
- C. Inputs.
- D. Classification.

Answer: B

Explanation:

The XSOAR Playbook Editor allows engineers to manipulate and transform context data dynamically.

According to the XSOAR Admin and Playbook Development Guides, "Extend Context" is the dedicated mechanism that enables a task to save output values into new or existing context keys, including keys that correspond to incident fields. By defining a key under the "Extend Context" section, the playbook task can map specific outputs—such as JSON fields, strings, arrays, or nested objects—to a structured location within the incident context. These keys can then be used to populate incident fields through further playbook tasks, field mappings, or automated incident field updates.

Classification (option A) applies only during ingestion and cannot assign task outputs to incident fields. Inputs (option B) define what data a task receives, not how it is stored afterward. Mapping (option D) belongs to the ingestion pipeline and determines how event

fields become incident fields during creation, not during playbook execution.

Therefore, Extend Context is the correct feature that allows a task to associate its output with incident fields, making option C the correct answer based on documentation.

NEW QUESTION # 130

.....

As the saying goes, to develop study interest requires to giving learner a good key for study, this is promoting learner active development of internal factors. The most function of our XSOAR-Engineer question torrent is to help our customers develop a good study habits, cultivate interest in learning and make them pass their exam easily and get their XSOAR-Engineer Certification. All workers of our company are working together, in order to produce a high-quality product for candidates.
