Question 21

An administrator has been tasked with ensuring NC2 VMs are able to access Azure and on-premises resources. The NC2 VM traffic must not traverse the internet.

How can the administrator achieve this?

- A. By using an SSH connection
- B. By using an Interface Endpoint
- C. By using ExpressRoute
- D. By using a Site-to-Site VPN

Hide Answer Comment (0)

Suggested answer: C

Explanation:

Requirement Analysis: The NC2 VMs need to access Azure and on-premises resources without traversing the internet, ensuring secure and direct connectivity.

Solution Options:

- SSH Connection: Suitable for individual remote access, not for full VM connectivity to Azure and on-premises resources.
- Interface Endpoint: Facilitates private connectivity to specific Azure services, but not comprehensive for all resources.
- ExpressRoute: Provides private, dedicated connectivity between Azure and on-premises environments. This ensures that traffic does not traverse the public internet, meeting the security and performance requirements.
- Site-to-Site VPN: Provides secure connectivity but can involve traversing the internet, which is against the requirements.

Conclusion: ExpressRoute is the optimal solution as it offers a private connection that does not involve internet traversal,

P.S. Free & New NCP-CI-Azure dumps are available on Google Drive shared by Itcertkey: <https://drive.google.com/open?id=1UyJIURaS2hUP5NaDMuenEWyMWM1UvX-b>

After the advent of the Itcertkey's latest Nutanix certification NCP-CI-Azure exam practice questions and answers, passing Nutanix certification NCP-CI-Azure exam is no longer a dream of the IT staff. All of Itcertkey's practice questions and answers about Nutanix Certification NCP-CI-Azure Exam have high quality and 95% similarity with the real exam questions. Itcertkey is worthful to choose. If you choose Itcertkey's products, you will be well prepared for Nutanix certification NCP-CI-Azure exam and then successfully pass the exam.

Nutanix NCP-CI-Azure Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Configuring an NC2 on Azure Environment: This section evaluates the skills of IT Administrators and emphasizes modifying cloud networking security to protect resources. Candidates will configure Nutanix networking settings and troubleshoot connectivity issues to ensure seamless communication within the cloud environment.

Topic 2	<ul style="list-style-type: none"> Managing an NC2 on Azure Environment: This section relates to skills in identifying management tasks for nodes and clusters. Candidates will monitor cluster health and cloud resource performance, ensuring that all components function efficiently. Understanding these management tasks is vital for maintaining operational integrity in a hybrid cloud environment.
Topic 3	<ul style="list-style-type: none"> Planning an NC2 on Azure Deployment: This section of the exam measures the skills of IT Administrators and covers the preparation of the Azure cloud environment, including determining the appropriate Azure account and node types. It also involves subscribing to the NC2 service, which requires knowledge of authentication methods and organization naming conventions. Additionally, candidates must determine implementation requirements by evaluating deployment use cases and redundancy needs. Identifying networking requirements is crucial, focusing on connectivity options like VPN and CIDR ranges.
Topic 4	<ul style="list-style-type: none"> Deploying an NC2 on Azure Environment: This section assesses the skills of Nutanix Cloud Operators and focuses on deploying the cloud cluster within the Azure environment. Candidates will learn to configure cloud provider networking effectively, ensuring that all necessary resources are correctly set up for deployment.

NCP-CI-Azure Latest Test Cram & Valid Test NCP-CI-Azure Braindumps

Research indicates that the success of our highly-praised NCP-CI-Azure test questions owes to our endless efforts for the easily operated practice system. Most feedback received from our candidates tell the truth that our NCP-CI-Azure guide torrent implement good practices, systems as well as strengthen our ability to launch newer and more competitive products. In fact, you can totally believe in our NCP-CI-Azure Test Questions for us 100% guarantee you pass exam. If you unfortunately fail in the exam after using our NCP-CI-Azure test questions, you will also get a full refund from our company by virtue of the proof certificate.

Nutanix Certified Professional - Cloud Integration - Azure (NCP-CI-Azure v6.7) Sample Questions (Q56-Q61):

NEW QUESTION # 56

Exhibit.

AN NC2 on Azure Cluster was deployed with two Flow gateways in HA (FGW1 and FGW2). After a week of use. Four bare-metal nodes, were added to the NC2 cluster and additional workloads were added. It was determined that additional bandwidth for north/South traffic would be needed. Two additional Flow gateways were added (FGW3 and FGW4) from the NC2 portal configuration menu.

The existing workloads prior to expansion on the NC2 cluster will be able to use which Flow Gateways using the No-Nat (routed) traffic path?

- A. All Flow Gateways can be used after the existing workloads reboot.
- B. Only the Flow Gateway that each workload was originally using.
- **C. All Flow Gateways can be used.**
- D. FGW1 & FGW2 only, new workloads can use FGW3 & FGW4.

Answer: C

Explanation:

In the scenario presented, the NC2 cluster was initially deployed with two Flow Gateways (FGW1 and FGW2) in HA. After adding four bare-metal nodes and additional workloads, two more Flow Gateways (FGW3 and FGW4) were added to handle the increased bandwidth for north/south traffic. Given the configuration, the existing workloads can utilize all available Flow Gateways (FGW1, FGW2, FGW3, and FGW4) for No-NAT (routed) traffic paths. This setup allows for Equal Cost Multipath (ECMP) routing, distributing traffic load across all Flow Gateways.

NEW QUESTION # 57

An organization wants to use a Jump Host to access Prism Element and Prism Central within an NC2 cluster on Azure.

Which statement is true?

- A. Jump Host instance can only be deployed in the Prism Central VNet.
- B. Jump Host must not be used. Only VPN or ExpressRoute should be use.
- **C. Jump Host instance can be deployed in the Prism Central VNet or an external VNet.**
- D. Jump Host instance must be deployed in the cluster VNet.

Answer: C

Explanation:

Jump Host Deployment: A Jump Host is a secure server used to access other systems in a network. In the context of an NC2 cluster on Azure, it serves as an intermediary for accessing Prism Element and Prism Central.

Flexible Deployment Options: The Jump Host can be deployed in either the Prism Central VNet or an external VNet, providing flexibility in network design and access strategies. This allows the organization to choose the most suitable network for deploying the Jump Host based on their security and connectivity requirements.

NEW QUESTION # 58

What will be observed in the NC2 cluster when terminating a node from the Azure portal?

- **A. NC2 will mark the node as degraded.**
- B. NC2 will terminate the node from the cluster.
- C. NC2 will continue re-provisioning the node.
- D. NC2 will shutdown the node.

Answer: A

Explanation:

* Node Termination Observation: When a node is terminated from the Azure portal, the NC2 cluster will detect that the node is no longer operational.

* Marking as Degraded: NC2 will mark the node as degraded, indicating that the node is not functioning as expected. This status allows administrators to take necessary actions to resolve the issue, such as provisioning a new node or addressing the degradation cause.

NEW QUESTION # 59

An administrator has recently deployed an NC2 on azure cluster, but does not have connectivity back to the on-premises environment. The administrator would like to start working on configuring the new cluster. What is the best way to get access to Prism Central?

- A. Deploy a Jump Host in an external VNet and peer the VNets for communication between bare-metal VNet and the Jump Host VNet.
- **B. Deploy a Jump Host in an external VNet and peer the VNets for communication between Prism Central VNet and the Jump Host VNet.**
- C. Deploy a Jump Host Instance In the Prism Central VNet inside a delegated subnet
- D. Deploy a Jump Host instance in the same subnet as the bare-metal.

Answer: B

Explanation:

Jump Host Deployment: A Jump Host provides a secure method to access the NC2 environment when direct connectivity is unavailable. Deploying it in an external VNet allows flexibility in managing network access and security.

VNet Peering: By peering the external VNet (where the Jump Host is deployed) with the VNet containing Prism Central, the administrator can establish a communication pathway. This setup enables secure and controlled access to Prism Central from the Jump Host.

NEW QUESTION # 60

When configuring permissions for an Azure subscription, which role is required to delegate minimum permissions for the Azure AD App registration?

- A. Azure Custom role defined by Nutanix
- B. Azure Reader role
- C. Azure Contributor role
- **D. Azure user Access Administrator role**

Answer: D

Explanation:

* **Azure AD App Registration:** When setting up an application registration in Azure AD, specific permissions are required to delegate access.

* **User Access Administrator Role:** This role has the necessary permissions to manage user access to

* Azure resources, including delegating permissions for app registrations.

* **Comparison of Roles:**

* **Azure Reader Role:** Grants read-only access, insufficient for managing app registrations.

* **Azure Contributor Role:** Allows creation and management of resources but does not include permissions to manage access.

* **Azure Custom Role:** While it can be defined to meet specific needs, the User Access Administrator role is predefined to handle access delegation.

* **Conclusion:** The Azure User Access Administrator role is required to delegate minimum permissions for Azure AD App registration.
