## ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q103-Q108):

### NEW QUESTION # 103

Which database operations can be controlled with Application Access? (Choose 2 answers)

- A. Create
- B. Update
- C. Query
- D. Execute

**Answer: A,C**

Explanation:

Application Access settings in ServiceNow control which operations are permitted on a table by other applications. The following operations can be restricted:

Query (A) - Valid: Controls whether other applications can read (query) records from the table.

Create (B) - Valid: Determines whether other applications can add new records to the table.

Execute (C) - Incorrect: No such operation exists for Application Access.

Update (D) - Incorrect: "Update" permissions are controlled through Access Control Lists (ACLs), not Application Access settings.

#### NEW QUESTION # 104

Application developers can specify which ServiceNow page a user sees after submitting a new record using the Record Producer UI. How is the page specified?

- A. Write a script in the Record Producer's Script field: `producer.redirect = "<URL>";`
- B. Configure the page in the Module that opens the Record Producer UI
- C. Write an after Business Rule script for the Record Producer's table: `window.redirect = "<URL>";`
- D. Create an application property to store the URL

**Answer: D**

Explanation:

Application developers can specify which ServiceNow page a user sees after submitting a new record using the Record Producer UI by writing a script in the Record Producer's Script field: `producer.redirect = "<URL>";`. This script sets the redirect property of the producer object to the URL of the desired page. For example, `producer.redirect = "home.do";` will redirect the user to the homepage after submitting the record. The other options are not valid ways to specify the redirect page for a Record Producer.

Reference: Populate record producer data and redirect users

#### NEW QUESTION # 105

Which of the following steps can be used to import new data into ServiceNow from a spreadsheet?

- A. Select Data Source, Schedule Transform
- B. Select Import Set, Select Transform Map, Run Transform
- C. Load Data, Create Transform Map, Run Transform Most Voted
- D. Define Data Source, Select Transform Map, Run Transform

**Answer: C**

Explanation:

The steps to import new data into ServiceNow from a spreadsheet are: Load Data, Create Transform Map, Run Transform. Load Data is the process of uploading the spreadsheet file and creating an Import Set table that contains the data to be imported. Create Transform Map is the process of defining how the fields from the Import Set table map to the fields of the target table in ServiceNow. Run Transform is the process of executing the Transform Map and copying the data from the Import Set table to the target table.

Reference: Import sets, Transform maps

#### NEW QUESTION # 106

Which one of the following client-side scripts apply to Record Producers?

- A. Client Scripts and UI Policies
- B. Catalog Client Scripts and Catalog UI Policies
- C. UI Scripts and UI Actions
- D. UI Scripts and Record Producer Scripts

**Answer: B**

Explanation:

Catalog Client Scripts and Catalog UI Policies are the client-side scripts that apply to Record Producers.

Catalog Client Scripts allow you to add or modify functionality on a catalog item or record producer form.

Catalog UI Policies dynamically change information on a catalog item or record producer form. UI Scripts, UI Actions, Client Scripts, and UI Policies do not apply to Record Producers. Reference: Catalog client scripts, Catalog UI policies Reference:

#### NEW QUESTION # 107

Which of the following is true about deleting fields from a table?

- A. Inherited fields can be detected
- **B. User-defined non-inherited fields can be detected**
- C. Table records are deleted when a field is detected
- D. Any field on a table can be deleted

**Answer: B**

Explanation:

User-defined non-inherited fields can be deleted from a table in ServiceNow. These are fields that are created by users on a specific table and are not inherited from a parent table. Inherited fields cannot be deleted from a table, as they are defined on a parent table and shared by all child tables. Any field on a table cannot be deleted, as some fields are system-defined and essential for the table functionality. Table records are not deleted when a field is deleted, as the field deletion only affects the table structure and not the data. Reference: Delete fields
