How to Prepare for IAPP CIPM: Certified Information Privacy Manager Exam

Preparation Guide for IAPP CIPM: Certified Information Privacy Manager Exam

Introduction

IAPP offers the most encompassing, up-to-date, and sought-after global training and certification program for privacy and data protection, IAPP mainly focus on 3 different certifications:

- CIPP (Certified Information Privacy Professional)
- CIPM (Certified Information Privacy Manager)
- CIPP/US: Certified Information Privacy Professional/United States CIPM (Certified Information Privacy Technologist)

According to IAPP, Data privacy is certainly a hot topic in cybersecurity. While several technology professionals push on the safety of data; still we observed privacy falls short. A revived commitment to data privacy signals a chance for technology professionals with data privacy expertise. CIPM exams enables organizations to leverage Data Security. With a thorough understanding of Data Security architecture and its framework, this individual can design, develop, and manage robust, secure, and dynamic solutions in terms of data security to drive business objectives.

Certification is evidence of your skills, expertise in those areas in which you like to work. There are many vendors in the market that are providing these certifications. If candidate wants to work on CIPM and prove his knowledge, Certification offered by IAPP. CIPM Individuals Qualification Certification helps a candidate to validates his skills in data privacy Technology.

The IAPP defines this certification as perfect for “the go-to person for privacy laws, guidelines and frameworks” in a company. This target market can include many other senior personal privacy or security experts with IT training experience, but can also include individuals belonging to the government, legal, or administrative companies whose job it is to keep the information confidential. and also, in terms of security. This is doubled for those involved in legal and compliance requests, information monitoring, information management, and even personal (as privacy is an individual matter at heart, including personal data).

Since privacy protection and private data protection are generally heavily managed and based on legal systems and frameworks, the IAPP provides variations of CIPP accreditation where this material and coverage has been “localized” for directives. applicable laws and regulations. and ideal techniques.

In this guide, we will cover the **IAPP CIPM Exam Test**, **IAPP CIPM practice exams** and certified professional salary and all aspects of the **IAPP CIPM exam dumps**.

The CIPM certification demonstrates a professional’s commitment to privacy management and their ability to navigate the complex and ever-changing privacy landscape. Certified Information Privacy Manager (CIPM) certification is accredited by the American National Standards Institute (ANSI) and is recognized by privacy regulators and organizations around the world. Certified Information Privacy Manager (CIPM) certification exam is based on the International Association of Privacy Professionals (IAPP) Privacy Program Management: Tools for Managing Privacy Within Your Organization textbook, which is a comprehensive guide to developing, implementing, and managing a privacy program.

- Surveillance by public authorities, interception of communications, closed-circuit television (CCTV), geolocation
- Legal basis for processing of employee data, storage of personnel records, workplace monitoring and data loss prevention, EU Works councils, whistleblowing systems, 'Bring your own device' (BYOD) programs

Direct Marketing

- Telemarketing, direct marketing, online behavioral targeting

Internet Technologies and Communications

- Cloud computing, web cookies, search engine marketing (SEM), social networking services

IAPP Certified Information Privacy Manager (CIPM) Sample Questions (Q201-Q206):

NEW QUESTION # 201

SCENARIO

Please use the following to answer the next QUESTION:

Edufox has hosted an annual convention of users of its famous e-learning software platform, and over time, it has become a grand event. It fills one of the large downtown conference hotels and overflows into the others, with several thousand attendees enjoying three days of presentations, panel discussions and networking. The convention is the centerpiece of the company's product rollout schedule and a great training opportunity for current users. The sales force also encourages prospective clients to attend to get a better sense of the ways in which the system can be customized to meet diverse needs and understand that when they buy into this

system, they are joining a community that feels like family.

This year's conference is only three weeks away, and you have just heard news of a new initiative supporting it: a smartphone app for attendees. The app will support late registration, highlight the featured presentations and provide a mobile version of the conference program. It also links to a restaurant reservation system with the best cuisine in the areas featured. "It's going to be great," the developer, Deidre Hoffman, tells you, "if, that is, we actually get it working!" She laughs nervously but explains that because of the tight time frame she'd been given to build the app, she outsourced the job to a local firm. "It's just three young people," she says, "but they do great work." She describes some of the other apps they have built. When asked how they were selected for this job, Deidre shrugs. "They do good work, so I chose them." Deidre is a terrific employee with a strong track record. That's why she's been charged to deliver this rushed project. You're sure she has the best interests of the company at heart, and you don't doubt that she's under pressure to meet a deadline that cannot be pushed back. However, you have concerns about the app's handling of personal data and its security safeguards. Over lunch in the break room, you start to talk to her about it, but she quickly tries to reassure you, "I'm sure with your help we can fix any security issues if we have to, but I doubt there'll be any. These people build apps for a living, and they know what they're doing. You worry too much, but that's why you're so good at your job!" Since it is too late to restructure the contract with the vendor or prevent the app from being deployed, what is the best step for you to take next?

- A. Develop security protocols for the vendor and mandate that they be deployed.
- B. Insist on an audit of the vendor's privacy procedures and safeguards.
- **C. Ask the vendor for verifiable information about their privacy protections so weaknesses can be identified.**
- D. Implement a more comprehensive suite of information security controls than the one used by the vendor.

Answer: C

Explanation:

This answer is the best step to take next, as it can help you to assess the current state of the vendor's privacy practices and determine if they meet the organization's standards and expectations, as well as the applicable laws and regulations. Asking the vendor for verifiable information about their privacy protections can include requesting documentation, evidence or demonstration of how they collect, use, store, protect, share and dispose of personal data, what policies and procedures they have in place, what technical and organizational measures they implement, what certifications or audits they have obtained or undergone, and how they handle any privacy incidents or breaches. Based on this information, you can identify any weaknesses or gaps in the vendor's privacy protections and recommend or require any improvements or corrections before the app is deployed. Reference: IAPP CIPM Study Guide, page 82; ISO/IEC 27002:2013, section 15.1.2

NEW QUESTION # 202

Under the European Data Protection Board (EDPB), which processing operation would require a DPIA?

- A. An online store displaying advertisements based on items viewed or purchased on its own website.
- B. A healthcare clinic that processes personal data of its patients in its billing system.
- **C. A hospital processing patient's genetic and health data in its hospital information system.**
- D. An online newspaper using its subscriber list to email a daily newsletter.

Answer: C

NEW QUESTION # 203

SCENARIO

Please use the following to answer the next question:

Perhaps Jack Kelly should have stayed in the U.S. He enjoys a formidable reputation inside the company, Special Handling Shipping, for his work in reforming certain "rogue" offices. Last year, news broke that a police sting operation had revealed a drug ring operating in the Providence, Rhode Island office in the United States.

Video from the office's video surveillance cameras leaked to news operations showed a drug exchange between Special Handling staff and undercover officers.

In the wake of this incident, Kelly had been sent to Providence to change the "hands off" culture that upper management believed had let the criminal elements conduct their illicit transactions. After a few weeks under Kelly's direction, the office became a model of efficiency and customer service. Kelly monitored his workers' activities using the same cameras that had recorded the illegal conduct of their former co-workers.

Now Kelly has been charged with turning around the office in Cork, Ireland, another trouble spot. The company has received numerous reports of the staff leaving the office unattended. When Kelly arrived, he found that even when present, the staff often spent their days socializing or conducting personal business on their mobile phones. Again, he observed their behaviors using surveillance cameras. He issued written reprimands to six staff members based on the first day of video alone.

Much to Kelly's surprise and chagrin, he and the company are now under investigation by the Data Protection Commissioner of Ireland for allegedly violating the privacy rights of employees. Kelly was told that the company's license for the cameras listed facility security as their main use, but he does not know why this matters. He has pointed out to his superiors that the company's training programs on privacy protection and data collection mention nothing about surveillance video.

You are a privacy protection consultant, hired by the company to assess this incident, report on the legal and compliance issues, and recommend next steps.

What should you advise this company regarding the status of security cameras at their offices in the United States?

- A. Restrict access to surveillance video taken by the security cameras and destroy the recordings after a designated period of time.
- B. Add security cameras at facilities that are now without them.
- C. Reduce the number of security cameras located inside the building.
- **D. Set policies about the purpose and use of the security cameras.**

Answer: D

NEW QUESTION # 204

SCENARIO

Please use the following to answer the next QUESTION:

As the company's new chief executive officer, Thomas Goddard wants to be known as a leader in data protection. Goddard recently served as the chief financial officer of Hoopy.com, a pioneer in online video viewing with millions of users around the world. Unfortunately, Hoopy is infamous within privacy protection circles for its ethically questionable practices, including unauthorized sales of personal data to marketers.

Hoopy also was the target of credit card data theft that made headlines around the world, as at least two million credit card numbers were thought to have been pilfered despite the company's claims that

"appropriate" data protection safeguards were in place. The scandal affected the company's business as competitors were quick to market an increased level of protection while offering similar entertainment and media content. Within three weeks after the scandal broke, Hoopy founder and CEO Maxwell Martin, Goddard's mentor, was forced to step down.

Goddard, however, seems to have landed on his feet, securing the CEO position at your company, Medialite, which is just emerging from its start-up phase. He sold the company's board and investors on his vision of Medialite building its brand partly on the basis of industry-leading data protection standards and procedures.

He may have been a key part of a lapsed or even rogue organization in matters of privacy but now he claims to be reformed and a true believer in privacy protection. In his first week on the job, he calls you into his office and explains that your primary work responsibility is to bring his vision for privacy to life. But you also detect some reservations. "We want Medialite to have absolutely the highest standards," he says. "In fact, I want us to be able to say that we are the clear industry leader in privacy and data protection. However, I also need to be a responsible steward of the company's finances. So, while I want the best solutions across the board, they also need to be cost effective." You are told to report back in a week's time with your recommendations. Charged with this ambiguous mission, you depart the executive suite, already considering your next steps.

You are charged with making sure that privacy safeguards are in place for new products and initiatives. What is the best way to do this?

- A. Develop a plan for introducing privacy protections into the product development stage
- B. Conduct a gap analysis after deployment of new products, then mend any gaps that are revealed
- **C. Institute Privacy by Design principles and practices across the organization**
- D. Hold a meeting with stakeholders to create an interdepartmental protocol for new initiatives

Answer: C

Explanation:

Privacy by Design principles ensure that privacy considerations are integrated from the very beginning and throughout the entire product or initiative development process. This proactive approach not only ensures that privacy safeguards are in place from the start but can also be more cost-effective in the long run as it helps prevent potential breaches or issues that might arise later, saving on potential fines, reputational damage, and corrective actions.

NEW QUESTION # 205

SCENARIO

Please use the following to answer the next QUESTION:

It's just what you were afraid of. Without consulting you, the information technology director at your organization launched a new

initiative to encourage employees to use personal devices for conducting business. The initiative made purchasing a new, high-specification laptop computer an attractive option, with discounted laptops paid for as a payroll deduction spread over a year of paychecks. The organization is also paying the sales taxes. It's a great deal, and after a month, more than half the organization's employees have signed on and acquired new laptops. Walking through the facility, you see them happily customizing and comparing notes on their new computers, and at the end of the day, most take their laptops with them, potentially carrying personal data to their homes or other unknown locations. It's enough to give you data-protection nightmares, and you've pointed out to the information technology Director and many others in the organization the potential hazards of this new practice, including the inevitability of eventual data loss or theft.

Today you have in your office a representative of the organization's marketing department who shares with you, reluctantly, a story with potentially serious consequences. The night before, straight from work, with laptop in hand, he went to the Bull and Horn Pub to play billiards with his friends. A fine night of sport and socializing began, with the laptop "safely" tucked on a bench, beneath his jacket. Later that night, when it was time to depart, he retrieved the jacket, but the laptop was gone. It was not beneath the bench or on another bench nearby. The waitstaff had not seen it. His friends were not playing a joke on him. After a sleepless night, he confirmed it this morning, stopping by the pub to talk to the cleanup crew. They had not found it. The laptop was missing. Stolen, it seems. He looks at you, embarrassed and upset.

You ask him if the laptop contains any personal data from clients, and, sadly, he nods his head, yes. He believes it contains files on about 100 clients, including names, addresses and governmental identification numbers. He sighs and places his head in his hands in despair.

Which is the best way to ensure that data on personal equipment is protected?

- A. User risk training.
- B. Frequent data backups.
- C. Encryption of the data.
- D. Biometric security.

Answer: C

Explanation:

Encryption of the data is the best way to ensure that data on personal equipment is protected, as it prevents unauthorized access to the data even if the equipment is lost or stolen. Encryption is the process of transforming data into an unreadable format that can only be decrypted with a valid key or password. Encryption can be applied to the entire device, a specific folder or file, or a removable storage media. Encryption is one of the most effective technical safeguards for data protection and is recommended by many privacy laws and standards.
