Threat Hunting and Defending using Cisco Technologies for CyberOps Test Online Engine

Choose Prep4cram 300-220 new dumps questions, you will never regret for your decision. Our high-quality 300-220 exam cram can ensure you 100% pass. You see, we have quality control system, each questions of 300-220 exam dumps are checked and confirmed strictly according to the quality control system. Besides, the updated frequency for 300-220 Exam Questions is so regular and in accordance with the real exam changes. You can enjoy one year free update after purchase.

Cisco Conducting Threat Hunting and Defending using Cisco Technologies for CyberOps Sample Questions (Q41-Q46):

NEW QUESTION # 41

Interpreting a threat intelligence report requires understanding of:

- A. The financial impact of potential breaches
- **B. The context, including tactics, techniques, and procedures used by attackers**
- C. The legal implications of the attacker's actions
- D. Only the technical details of the reported vulnerabilities

Answer: B

NEW QUESTION # 42

Effective communication of threat hunting findings should:

- A. Use technical language to demonstrate expertise
- B. Focus only on the technical aspects, ignoring business impacts
- **C. Be tailored to the technical level of the audience**
- D. Prioritize sharing successes over lessons learned from failures

Answer: C

NEW QUESTION # 43

What is the second step in the Threat Hunting Process?

- **A. Analyzing existing threat intelligence**
- B. Validating the hypothesis
- C. Deploying security tools
- D. Identifying potential threats

Answer: A

NEW QUESTION # 44

A Cisco-focused SOC wants to move detection coverage higher on the Pyramid of Pain. Which hunting outcome BEST supports this objective?

- A. Quarantining infected endpoints automatically
- B. Blocking known malicious domains using Cisco Secure Web Appliance
- **C. Detecting abnormal authentication behavior across VPN and cloud access**
- D. Creating alerts for malware hashes from Talos feeds

Answer: C

Explanation:

The correct answer is detecting abnormal authentication behavior across VPN and cloud access. This outcome targets behavioral detection, which sits significantly higher on the Pyramid of Pain than static indicators.

Options A and C rely on domains and hashes, which attackers can trivially change. Option D is a response action, not a hunting

outcome.

Credential misuse is one of the most common initial access vectors, especially in cloud and remote-access environments. Detecting abnormal authentication behavior—such as:

- * Impossible travel
- * Unusual login times
- * Excessive failed logins
- * Geographic anomalies

forces attackers to change how they operate, not just what infrastructure they use.

Cisco tools such as:

- * Secure Network Analytics
- * Secure Endpoint
- * Secure Firewall
- * Identity telemetry via VPN and SSO

enable this higher-fidelity detection approach. This aligns directly with CBRTD blueprint objectives focused on identity-based threat hunting.

Therefore, Option B is correct.

NEW QUESTION # 45

To improve the effectiveness of a threat hunt, it is recommended to:

- **A. Utilize more automated tools and techniques**
- B. Only hunt for threats during business hours
- C. Increase the coffee budget for the security team
- D. Ignore low severity alerts

Answer: A

NEW QUESTION # 46

.....

The authority of Prep4cram in Cisco 300-220 exam questions rests on its being high-quality and prepared according to the latest pattern. Prep4cram is proud to announce that our Cisco 300-220 Exam Dumps help the desiring candidates of Cisco 300-220 certification to climb the ladder of success by grabbing the Cisco Exam Questions.
