At QuestionsTube, you can read DS0-001 free demo questions in pdf file, so you can check the questions and answers before deciding to download the CompTIA DS0-001 practice questions. These free demo questions are parts of the DS0-001 exam questions. Download and read them carefully, you will find that the DS0-001 test questions of QuestionsTube will be your great learning materials online. Share some DS0-001 exam online questions below.

1. A database administrator is conducting a stress test and providing feedback to a team that is

Heute steigert sich alles außer dem Gehalt sehr schnell. Wollen Sie nicht einen Durchbruch machen? Sie können Ihr Gehalt verdoppeln. Das ist sehr wahrscheinlich. Wenn Sie nur die CompTIA DS0-001 Zertifizierungsprüfung bestehen können, können Sie bekommen, wie Sie wollen. Die Dumps von Fast2test wird Ihnen helfen, die CompTIA DS0-001 Prüfung 100% zu bestehen, was uns sehr wundert. Das ist echt, Sie sollen keine Zweifel haben.

CompTIA DS0-001 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Data and Database Security: This topic focuses on data security concepts, governance and regulatory compliance purposes, implementing authentication and authorization policies and best practices. Additionally, the topic discusses database infrastructure security, and understanding types of attacks and their effects on data systems.
Thema 2	• Database Fundamentals: This topic covers database structure types, SQL code development and modification based on scenarios, comparison of scripting methods and environments, and the impact of programming on database operations.

Thema 3	• Database Deployment: In this topic, you'll find discussions on database planning and design aspects. It also focuses on the implementation, testing, and deployment phases of databases.
Thema 4	• Database Management and Maintenance: Here, you'll learn about monitoring and reporting for database management and performance, common database maintenance processes, documentation production, and relevant tools usage. Lastly, the topic focuses on implementing data management tasks.
Thema 5	• Business Continuity: Finally, this topic covers the importance of disaster recovery techniques. Moreover, the topic explains backup and restore best practices and processes.

DS0-001 Deutsch Prüfungsfragen & DS0-001 Originale Fragen

Fast2test hat vielen IT-Zertifizierungskandidaten geholfen. Und Fast2test bekommt gute Bewertung von den Kandidaten. Die Erfolgsquote von Fast2test Prüfungsfragen erreicht 100%, was auch die Tatsache von vielen Kadidaten geprüft werden. Wenn Sie sich sehr müde für die Vorbereitung der CompTIA DS0-001 Zertifizierungsprüfung fühlen, können Sie die DS0-001 Prüfungsunterlagen nicht ignorieren. Das ist ein Werkzeug für die hocheffektive Vorbereitung der CompTIA DS0-001 Prüfung. Es kann Ihre Effektivität am größten Teil erhöhen.

CompTIA DataSys+ Certification Exam DS0-001 Prüfungsfragen mit Lösungen (Q130-Q135):

130. Frage

Which of the following database instances are created by default when SQL Server is installed?
(Choose two.)

- A. Root
- **B. Master**
- C. Index
- D. Log
- **E. Model**
- F. View

Antwort: B,E

Begründung:

The two database instances that are created by default when SQL Server is installed are master and model. Master is a system database that contains the information and settings of the SQL Server instance, such as the configuration, logins, endpoints, databases, etc. Master is essential for the operation and management of the SQL Server instance, and it should be backed up regularly. Model is a system database that serves as a template for creating new user databases.

Model contains the default settings and objects, such as tables, views, procedures, etc., that will be inherited by the new user databases. Model can be modified to customize the new user databases according to specific needs or preferences. The other options are either not database instances or not created by default when SQL Server is installed. For example, root is not a database instance, but a term that refers to the highest level of access or privilege in a system; log is not a database instance, but a file that records the changes made by transactions on a database; view is not a database instance, but an object that represents a subset or a combination of data from one or more tables; index is not a database instance, but a data structure that stores the values of one or more columns of a table in a sorted order.

131. Frage

Which of the following is a result of an on-path attack on a system?

- A. An email from an unknown source requesting bank account details
- B. A website that has crashed and is no longer accessible
- **C. A Wi-Fi network that redirects to clones of legitimate websites**
- D. A web application that returns the addresses of its customers

Antwort: C

Begründung:

A result of an on-path attack on a system is a Wi-Fi network that redirects to clones of legitimate websites. An on-path attack is a type of attack that intercepts and modifies the traffic between two parties without their knowledge or consent. An attacker can use an on-path attack to create a rogue Wi-Fi network that mimics a legitimate one, and then redirect the users to fake websites that look like the ones they intended to visit. The attacker can then steal the users' personal or financial information, such as usernames, passwords, credit card numbers, or bank account details. The other options are either results of different types of attacks or not related to attacks at all. For example, a website that has crashed and is no longer accessible may be a result of a denial-of-service attack, an email from an unknown source requesting bank account details may be a result of a phishing attack, and a web application that returns the addresses of its customers may be a result of a poor design or a data breach. Reference: CompTIA DataSys+ Course Outline, Domain 4.0 Data and Database Security, Objective 4.4 Given a scenario, identify common types of attacks against databases.

132. Frage

Several users received a message from the Chief Executive Officer asking them for their bank account details. Which of the following types of attacks is taking place?

- **A. Phishing**
- B. Brute-force
- C. Malware
- D. Denial of service

Antwort: A

133. Frage

A database administrator needs to ensure continuous availability of a database in case the server fails. Which of the following should the administrator implement to ensure high availability of the database?

- **A. Replication**
- B. ETL
- C. Database dumping
- D. Backup and restore

Antwort: A

Begründung:

The option that the administrator should implement to ensure high availability of the database is replication. Replication is a process that copies and synchronizes data from one database server (the primary or source) to one or more database servers (the secondary or target). Replication helps ensure high availability of the database by providing redundancy, fault tolerance, and load balancing. If the primary server fails, the secondary server can take over and continue to serve the data without interruption or data loss. The other options are either not related or not suitable for this purpose. For example, ETL is a process that extracts, transforms, and loads data from one source to another for analysis or reporting purposes; database dumping is a process that exports the entire content of a database to a file for backup or migration purposes; backup and restore is a process that copies and recovers data from a backup device or media in case of a disaster or corruption. Reference: CompTIA DataSys+ Course Outline, Domain 5.0 Business Continuity, Objective 5.3 Given a scenario, implement replication of database management systems.

134. Frage

A database administrator should review the database disaster recovery documentation:

- A. during every first week of every month.
- **B. when the company's business requirements change.**
- C. whenever a new Chief Technical Officer joins the company.
- D. just before an outside audit is scheduled.

Antwort: B

Begründung:

Disaster recovery documentation should be reviewed and updated whenever business requirements change to ensure recovery plans remain aligned with current needs.

135. Frage
