APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34

Which statement describes a requirement for information security objectives?

- A. They shall all be measurable
- B. **They shall be consistent with the information security policy**
- C. They shall be reviewed at least annually
- D. They shall be contractually transferred to third parties

Answer: B

Explanation:

Clause 6.2 (Information security objectives) requires that objectives:

- * "be consistent with the information security policy"
- * "be measurable (if practicable)"
- * "take into account applicable information security requirements"
- * "be monitored, communicated, and updated as appropriate."

From this, option A is correct since consistency with policy is an explicit requirement. Option B is incorrect because the standard allows objectives to be measurable "if practicable" (not mandatory for all). Option C is incorrect-objectives are not transferred contractually to third parties, though third-party agreements may include security requirements. Option D is incorrect because the standard requires regular review "as appropriate," not a fixed annual cycle.

Thus, the verified requirement is A: They shall be consistent with the information security policy.

NEW QUESTION # 35

Identify the missing word in the following sentence.

According to ISO/IEC 27000, the definition of risk [?] is a "process to comprehend the nature of risk and to determine the level of risk."

- A. **Analysis**
- B. Management
- C. Evaluation
- D. Assessment

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27000 standards:

ISO/IEC 27000 defines:

- * Risk analysis: "process to comprehend the nature of risk and to determine the level of risk" (Clause 3.58).
- * Risk assessment: the overall process of risk identification, risk analysis, and risk evaluation.
- * Risk evaluation: compares results of risk analysis against risk criteria to determine priority.
- * Risk management: coordinated activities to direct and control an organization with regard to risk.

Therefore, the missing word in the given definition is "analysis".

This is important for ISMS implementation: organizations must understand the distinctions. Risk analysis is the core technical evaluation stage, while assessment is the broader process including evaluation, and management refers to the overall governance of risks.

Thus, the correct verified answer is B: Analysis.

NEW QUESTION # 36

Which trend in information security performance is required to be considered during a management review of the ISMS?

- A. **Achievement of information security objectives**
- B. Decisions related to continual improvement opportunities

- C. Validity of information continuity controls
- D. Relevant external and internal requirements changes

Answer: A

Explanation:

Clause 9.3.2 (Management Review Inputs) states that management reviews shall include:

"c) information on the information security performance, including trends in: (1) nonconformities and corrective actions; (2) monitoring and measurement results; (3) audit results; and (4) fulfilment of information security objectives." This makes achievement of information security objectives(option A) a required trend to be considered.

While external/internal requirements (C) and continual improvement opportunities (D) are also part of management review inputs, they are not specifically listed under "trends in performance." Option B is outside the direct requirement.

Thus, the verified answer isA.

NEW QUESTION # 37

Which statement describes Annex A of ISO/IEC 27001?

- A. Provides measures to determine risk treatment effectiveness
- B. Defines the criteria for accepting risks
- C. Defines a mandatory list of controls that shall be implemented
- **D. Provides a reference list of information security controls and their requirements**

Answer: D

Explanation:

Annex A of ISO/IEC 27001:2022 is titled:

"Reference control objectives and controls." It provides areference list of information security controls, structured into 4 themes: organizational, people, physical, and technological.

The standard explicitly states in Clause 6.1.3: "Organizations can design controls as required or identify them from any source. Annex A contains a list of possible information security controls." This means controls in Annex A are not mandatory (eliminating option C). Risk acceptance criteria (A) are defined in Clause 6.1.2, not Annex A. Annex A also does not provide measures for treatment effectiveness (D).

Thus, Annex A is best described as areference list of information security controls. Correct answer:B.

NEW QUESTION # 38

Which item is required to be defined when planning the organization's risk assessment process?

- A. How the effectiveness of the method will be measured
- **B. The criteria for acceptable levels of risk**
- C. There are NO specific information requirements
- D. The parts of the ISMS scope which are excluded from the risk assessment

Answer: B

Explanation:

Clause 6.1.2 (Information security risk assessment) requires organizations to "define and apply an information security risk assessment process that... establishes and maintains information security risk criteria, including criteria for accepting risk." This means that acceptable levels of risk (risk acceptance criteria) must be explicitly defined. These criteria ensure consistent decision-making when evaluating whether identified risks need further treatment or can be tolerated.

Option A is incorrect because exclusions relate to the ISMS scope (Clause 4.3), not risk assessment planning.

Option B is not a requirement; effectiveness of risk assessment methods is not required to be measured, though methods must be applied consistently. Option D is false-the standard clearly specifies required elements for risk assessment.

Thus, the correct answer isC: The criteria for acceptable levels of risk.
