

NSE5_SSE_AD-7.6合格内容 & NSE5_SSE_AD-7.6ウェブトレーニング

さらに、TopexamNSE5_SSE_AD-7.6ダンプの一部が現在無料で提供されています：<https://drive.google.com/open?id=1XVkJDVq0rUOCK146kqyQYzrRab6wYq6>

近年、当社FortinetのNSE5_SSE_AD-7.6テストトレンドは好評を博し、献身的に99%の合格率に達しました。多くの労働者がより高度な自己改善を進めるための強力なツールとして、当社のNSE5_SSE_AD-7.6認定Fortinet NSE 5 - FortiSASE and SD-WAN 7.6 Core Administratorトレーニングは、高度なパフォーマンスと人間中心のテクノロジーに対する情熱を追求し続けています。さまざまな種類の候補者がNSE5_SSE_AD-7.6認定を取得する方法を見つけるために、多くの研究が行われています。シラバスの変更および理論と実践の最新の進展に応じて、Fortinet NSE 5 - FortiSASE and SD-WAN 7.6 Core Administratorガイドトレンドを修正およびTopexam更新します。

Fortinet NSE5_SSE_AD-7.6 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">• SASE Deployment: This domain covers FortiSASE administration settings, user onboarding methods, and integration with SD-WAN infrastructure.
トピック 2	<ul style="list-style-type: none">• Analytics: This domain covers analyzing SD-WAN and FortiSASE logs to monitor traffic behavior, identify security threats, and generate reports.
トピック 3	<ul style="list-style-type: none">• Secure Internet Access (SIA) and Secure SaaS Access (SSA): This section focuses on implementing security profiles for content inspection and deploying compliance rules to managed endpoints.
トピック 4	<ul style="list-style-type: none">• Decentralized SD-WAN: This domain covers basic SD-WAN implementation including configuring members, zones, and performance SLAs to monitor network quality.
トピック 5	<ul style="list-style-type: none">• Rules and Routing: This section addresses configuring SD-WAN rules and routing policies to control and direct traffic flow across different links.

NSE5_SSE_AD-7.6 合格への最短ルート試験受験者必携

Topexamの商品を使用したあとのひとはTopexamの商品がIT関連認定試験に対して役に立つとフィードバックします。弊社が提供した商品を利用すると試験にたやすく合格しました。FortinetのNSE5_SSE_AD-7.6認証試験に関する訓練は対応性のテストで君を助けることができ、試験の前に十分の準備をさしあげます。

Fortinet NSE 5 - FortiSASE and SD-WAN 7.6 Core Administrator 認定

NSE5_SSE_AD-7.6 試験問題 (Q11-Q16):

質問 # 11

Which three factors about SLA targets and SD-WAN rules should you consider when configuring SD-WAN rules? (Choose three answers)

- A. When configuring an SD-WAN rule, you can select multiple SLA targets if they are from the same performance SLA.
- B. Member metrics are measured only if a rule uses the SLA target.
- C. SD-WAN rules can use SLA targets to check whether the preferred members meet the SLA requirements.
- D. When configuring an SD-WAN rule, you can select multiple SLA targets from different performance SLAs.
- E. SLA targets are used only by SD-WAN rules that are configured with a Lowest Cost (SLA) strategy.

正解: A、C、E

解説:

According to the SD-WAN 7.6 Core Administrator study guide and the Fortinet Document Library, the interaction between SD-WAN rules and SLA targets is governed by specific selection and measurement logic:

* Usage by Strategy (Option B): SLA targets are fundamentally used by the Lowest Cost (SLA) strategy to determine which links are currently healthy enough to be considered for traffic steering. While other strategies like Best Quality use a "Measured SLA" to monitor metrics, they do not typically use the

"Required SLA Target" to disqualify links unless specifically configured in a hybrid mode. In most curriculum contexts, the "Required SLA Target" field is specifically associated with the Lowest Cost and Maximize Bandwidth strategies.

* SLA Compliance Checking (Option D): SD-WAN rules utilize SLA targets as a "pass/fail" gatekeeper. The engine checks if the preferred members meet the defined SLA requirements (latency, jitter, or packet loss thresholds). If a preferred member fails the SLA, the rule will move to the next member in the priority list that does meet the SLA.

* Single SLA Binding (Option E): When configuring an SD-WAN rule, the GUI and CLI allow you to select multiple SLA targets, but they must all belong to the same Performance SLA profile. You cannot mix and match targets from different health checks (e.g., Target 1 from "Google_HC" and Target 2 from "Amazon_HC") within a single SD-WAN rule.

Why other options are incorrect:

* Option A: This is incorrect because a single SD-WAN rule can only be associated with one specific Performance SLA profile at a time; therefore, you cannot select targets from different SLAs.

* Option C: This is incorrect because member metrics (latency, jitter, packet loss) are measured by the Performance SLA probes regardless of whether an SD-WAN rule is currently using that SLA target for steering decisions. Measurement is a function of the health-check, not the rule matching process.

質問 # 12

Which three FortiSASE use cases are possible? (Choose three answers)

- A. Secure SaaS Access (SSA)
- B. Secure Private Access (SPA)
- C. Secure Browser Access (SBA)
- D. Secure VPN Access (SVA)
- E. Secure Internet Access (SIA)

正解: A、B、E

質問 # 13

How does the FortiSASE security dashboard facilitate vulnerability management for FortiClient endpoints?

(Choose one answer)

- A. It provides a vulnerability summary, identifies affected endpoints, and supports automatic patching for eligible vulnerabilities.
- B. It automatically patches all vulnerabilities without user intervention and does not categorize vulnerabilities by severity.
- C. It shows vulnerabilities only for applications and requires endpoint users to manually check for affected endpoints.
- D. It displays only critical vulnerabilities, requires manual patching for all endpoints, and does not allow viewing of affected endpoints.

正解: A

解説:

According to the FortiSASE 7.6 Administration Guide and the FCP - FortiSASE 24/25 Administrator training materials, the security dashboard is a centralized hub for monitoring and remediating security risks across the entire fleet of managed endpoints.

* Vulnerability Summary: The dashboard includes a dedicated Vulnerability summary widget that categorizes risks by severity (Critical, High, Medium, Low) and by application type (OS, Web Client, etc.).

* Identifying Affected Endpoints: The dashboard is fully interactive; an administrator can drill down into specific vulnerability categories to view a detailed list of CVE data and, most importantly, identify the specific affected endpoints that require attention.

* Automatic Patching: FortiSASE supports automatic patching for eligible vulnerabilities (such as common third-party applications and supported OS updates). This feature is configured within the Endpoint Profile, allowing the FortiClient agent to remediate risks without requiring the user to manually run updates.

Why other options are incorrect:

* Option A: While it supports automatic patching, it does not do so for all vulnerabilities (only eligible/supported ones), and it specifically does not categorize them by severity.

* Option B: The dashboard shows vulnerabilities for the Operating System as well as applications, and it allows the administrator to identify affected endpoints rather than requiring the end-user to check.

* Option C: The dashboard displays all levels of severity (not just critical) and explicitly allows the viewing of affected endpoints.

質問 # 14

You want FortiGate to use SD-WAN rules to steer local-out traffic.

Which two constraints should you consider? (Choose two.)

- A. You must configure each local-out feature individually to use SD-WAN.
- B. By default, local-out traffic does not use SD-WAN.
- C. You can steer local-out traffic only with SD-WAN rules that use the manual strategy.
- D. By default, FortiGate uses SD-WAN rules only for local-out traffic that corresponds to ping and traceroute.

正解: A、B

解説:

By default, local-out traffic does not use SD-WAN → FortiGate normally sends local-out traffic (e.g., DNS, NTP, FortiGuard updates) directly through its interfaces without applying SD-WAN rules.

You must configure each local-out feature individually to use SD-WAN → To steer local-out traffic via SD-WAN, you must explicitly configure the desired local-out features (e.g., DNS, FortiGuard, CAPWAP) to use SD-WAN rules.

質問 # 15

Which two methods are available for provisioning FortiClient on endpoints using FortiSASE?

(Choose two.)

- A. FortiClient can be provisioned using SCCM or GPO, but only through an external portal, not the FortiSASE portal.
- B. FortiClient provisioning is limited to using mobile device management MDM software or manual installation without requiring an invitation code.
- C. FortiClient can be provisioned by distributing the installer to end users for manual installation.
- D. FortiClient can be provisioned only by distributing installers to end users through the FortiSASE portal without an invitation code.
- E. FortiClient can be provisioned using installers with an invitation code from the FortiSASE portal, SCCM or GPO, or mobile device management (MDM) software.

正解: C、E

解説:

Administrators can distribute the FortiClient installer for manual installation on endpoints.

FortiClient can also be provisioned using installers embedded with an invitation code, distributed through SCCM, GPO, or MDM solutions via the FortiSASE portal.
