SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q40-Q45):

NEW QUESTION # 40

In the Organizational Structure app in SAP Central Business Configuration, which of the following entities can be added under the Company root node? Note: There are 2 correct answers to this question.

- A. Sales Organization
- B. Plant
- C. Division
- D. Purchasing Organization

Answer: A,B

NEW QUESTION # 41

What have SAP S/4HANA Cloud Business Workflows been designed for? Note: There are 3 correct answers to this question.

- A. To create very simple release or approval procedures
- B. To create cross-product workflow procedures
- C. To create complex, repeated work processes with iterative cycles
- D. To create business processes with a high number of people involved in a pre-defined sequence
- E. To create standard procedures from SAP Signavio Process Navigator

Answer: B,C,D

Explanation:

SAP S/4HANA Cloud Business Workflows are designed to enhance and automate business processes within the organization. They serve multiple purposes:

- * To create complex, repeated work processes with iterative cycles: These workflows are designed to handle intricate processes that occur regularly within the business environment, allowing for automation and efficiency in tasks that require repetition and involve multiple steps or conditions.
- * To create cross-product workflow procedures: This capability allows for the integration of various SAP products and services into

a cohesive workflow, ensuring smooth and interconnected operations across different aspects of the business. It enables workflows that span across different SAP applications and solutions, providing a unified approach to managing business processes.

* To create business processes with a high number of people involved in a pre-defined sequence: SAP S

/4HANA Cloud Business Workflows are capable of handling processes that involve many participants, orchestrating the sequence of tasks to be completed by different individuals or departments. This ensures that each step of the process is executed in the right order by the right person, enhancing collaboration and efficiency.

NEW QUESTION # 42

Which type of testing should be done after a release upgrade has occurred?

- A. Integration tests
- **B. Regression tests**
- C. User Acceptance tests
- D. String tests

Answer: B

Explanation:

Regression tests are a type of testing that should be done after a release upgrade has occurred. Regression tests are performed to ensure that the existing functionality of the system is not affected by the changes introduced by the new release. Regression tests help to identify any defects or errors that may have been introduced or uncovered by the release upgrade. Regression tests are part of the quality assurance process and are essential for ensuring the stability and reliability of the system.
