A free demo of any Databricks Databricks-Certified-Data-Analyst-Associate exam dumps format will be provided by VCE4Plus to the one who wants to assess before purchasing. The desktop Customer Experience Databricks-Certified-Data-Analyst-Associate Practice Exam software is compatible with windows based computers. There is a 24/7 customer support team of VCE4Plus always to fix any problems.

## Databricks Databricks-Certified-Data-Analyst-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Data Visualization and Dashboarding: Sub-topics of this topic are about of describing how notifications are sent, how to configure and troubleshoot a basic alert, how to configure a refresh schedule, the pros and cons of sharing dashboards, how query parameters change the output, and how to change the colors of all of the visualizations. It also discusses customized data visualizations, visualization formatting, Query Based Dropdown List, and the method for sharing a dashboard.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Databricks SQL: This topic discusses key and side audiences, users, Databricks SQL benefits, complementing a basic Databricks SQL query, schema browser, Databricks SQL dashboards, and the purpose of Databricks SQL endpoints</li><li>• warehouses. Furthermore, the delves into Serverless Databricks SQL endpoint</li><li>• warehouses, trade-off between cluster size and cost for Databricks SQL endpoints</li><li>• warehouses, and Partner Connect. Lastly it discusses small-file upload, connecting Databricks SQL to visualization tools, the medallion architecture, the gold layer, and the benefits of working with streaming data.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Analytics applications: It describes key moments of statistical distributions, data enhancement, and the blending of data between two source applications. Moroeover, the topic also explains last-mile ETL, a scenario in which data blending would be beneficial, key statistical measures, descriptive statistics, and discrete and continuous statistics.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Data Management: The topic describes Delta Lake as a tool for managing data files, Delta Lake manages table metadata, benefits of Delta Lake within the Lakehouse, tables on Databricks, a table owner's responsibilities, and the persistence of data. It also identifies management of a table, usage of Data Explorer by a table owner, and organization-specific considerations of PII data. Lastly, the topic it explains how the LOCATION keyword changes, usage of Data Explorer to secure data.</li></ul>

Topic 5	<ul style="list-style-type: none"> <li>SQL in the Lakehouse: It identifies a query that retrieves data from the database, the output of a SELECT query, a benefit of having ANSI SQL, access, and clean silver-level data. It also compares and contrasts MERGE INTO, INSERT TABLE, and COPY INTO. Lastly, this topic focuses on creating and applying UDFs in common scaling scenarios.</li> </ul>

## VCE4Plus Desktop Databricks Databricks-Certified-Data-Analyst-Associate Practice Test Software

The practice test is a convenient tool to identify weak points in the Databricks Certified Data Analyst Associate Exam preparation. You can easily customize the level of difficulty of Databricks Databricks-Certified-Data-Analyst-Associate Practice Test to suit your study tempo. Our web-based practice test is an ideal way to create an Databricks exam-like situation.

## Databricks Certified Data Analyst Associate Exam Sample Questions (Q21-Q26):

### NEW QUESTION # 21

Which of the following should data analysts consider when working with personally identifiable information (PII) data?

- A. Legal requirements for the area in which the analysis is being performed
- B. Legal requirements for the area in which the data was collected
- C. All of these considerations
- D. Organization-specific best practices for PII data
- E. None of these considerations

**Answer: C**

Explanation:

Data analysts should consider all of these factors when working with PII data, as they may affect the data security, privacy, compliance, and quality. PII data is any information that can be used to identify a specific individual, such as name, address, phone number, email, social security number, etc. PII data may be subject to different legal and ethical obligations depending on the context and location of the data collection and analysis. For example, some countries or regions may have stricter data protection laws than others, such as the General Data Protection Regulation (GDPR) in the European Union. Data analysts should also follow the organization-specific best practices for PII data, such as encryption, anonymization, masking, access control, auditing, etc. These best practices can help prevent data breaches, unauthorized access, misuse, or loss of PII data. ### NEW QUESTION # 22

Which of the following approaches can be used to ingest data directly from cloud-based object storage?

- A. Create an external table while specifying the DBFS storage path to FROM
- B. Create an external table while specifying the DBFS storage path to PATH
- C. Create an external table while specifying the object storage path to LOCATION
- D. It is not possible to directly ingest data from cloud-based object storage
- E. Create an external table while specifying the object storage path to FROM

**Answer: C**

Explanation:

External tables are tables that are defined in the Databricks metastore using the information stored in a cloud object storage location. External tables do not manage the data, but provide a schema and a table name to query the data. To create an external table, you can use the CREATE EXTERNAL TABLE statement and specify the object storage path to the LOCATION clause. For example, to create an external table named ext\_table on a Parquet file stored in S3, you can use the following statement:

```
SQL
CREATE EXTERNAL TABLE ext_table (
  col1 INT,
  col2 STRING
)
STORED AS PARQUET
LOCATION 's3://bucket/path/file.parquet'
```

AI-generated code. Review and use carefully. More info on FAQ.

#### NEW QUESTION # 23

Which of the following describes how Databricks SQL should be used in relation to other business intelligence (BI) tools like Tableau, Power BI, and Looker?

- A. As an exact substitute with the same level of functionality
- B. As a substitute with less functionality
- **C. As a complementary tool for quick in-platform BI work**
- D. As a complete replacement with additional functionality
- E. As a complementary tool for professional-grade presentations

**Answer: C**

Explanation:

Databricks SQL is not meant to replace or substitute other BI tools, but rather to complement them by providing a fast and easy way to query, explore, and visualize data on the lakehouse using the built-in SQL editor, visualizations, and dashboards. Databricks SQL also integrates seamlessly with popular BI tools like Tableau, Power BI, and Looker, allowing analysts to use their preferred tools to access data through Databricks clusters and SQL warehouses. Databricks SQL offers low-code and no-code experiences, as well as optimized connectors and serverless compute, to enhance the productivity and performance of BI workloads on the lakehouse. Reference: Databricks SQL, Connecting Applications and BI Tools to Databricks SQL, Databricks integrations overview, Databricks SQL: Delivering a Production SQL Development Experience on the Lakehouse

#### NEW QUESTION # 24

Which of the following approaches can be used to ingest data directly from cloud-based object storage?

- A. Create an external table while specifying the DBFS storage path to FROM
- B. Create an external table while specifying the DBFS storage path to PATH
- **C. Create an external table while specifying the object storage path to LOCATION**
- D. It is not possible to directly ingest data from cloud-based object storage
- E. Create an external table while specifying the object storage path to FROM

**Answer: C**

Explanation:

External tables are tables that are defined in the Databricks metastore using the information stored in a cloud object storage location. External tables do not manage the data, but provide a schema and a table name to query the data. To create an external table, you can use the CREATE EXTERNAL TABLE statement and specify the object storage path to the LOCATION clause. For example, to create an external table named ext\_table on a Parquet file stored in S3, you can use the following statement:

```
SQL
CREATE EXTERNAL TABLE ext_table (
  col1 INT,
  col2 STRING
)
STORED AS PARQUET
LOCATION 's3://bucket/path/file.parquet'
```

AI-generated code. Review and use carefully. More info on FAQ.

#### NEW QUESTION # 25

A data analyst has been asked to provide a list of options on how to share a dashboard with a client. It is a security requirement that

the client does not gain access to any other information, resources, or artifacts in the database.

Which of the following approaches cannot be used to share the dashboard and meet the security requirement?

- A. Take a screenshot of the dashboard and share it with the client.
- B. Download a PNG file of the visualizations in the dashboard and share them with the client.
- C. Set a refresh schedule for the dashboard and enter the client's email address in the "Subscribers" box.
- D. Download the Dashboard as a PDF and share it with the client.
- **E. Generate a Personal Access Token that is good for 1 day and share it with the client.**

**Answer: E**

Explanation:

The approach that cannot be used to share the dashboard and meet the security requirement is D. Generating a Personal Access Token that is good for 1 day and sharing it with the client. This approach would give the client access to the Databricks workspace using the token owner's identity and permissions, which could expose other information, resources, or artifacts in the database<sup>1</sup>. The other approaches can be used to share the dashboard and meet the security requirement because:

A) Downloading the Dashboard as a PDF and sharing it with the client would only provide a static snapshot of the dashboard without any interactive features or access to the underlying data<sup>2</sup>.

B) Setting a refresh schedule for the dashboard and entering the client's email address in the "Subscribers" box would send the client an email with the latest dashboard results as an attachment or a link to a secure web page<sup>3</sup>. The client would not be able to access the Databricks workspace or the dashboard itself.

C) Taking a screenshot of the dashboard and sharing it with the client would also only provide a static snapshot of the dashboard without any interactive features or access to the underlying data<sup>4</sup>.

E) Downloading a PNG file of the visualizations in the dashboard and sharing them with the client would also only provide a static snapshot of the visualizations without any interactive features or access to the underlying data<sup>5</sup>. Reference:

1: Personal access tokens

2: Download as PDF

3: Automatically refresh a dashboard

4: Take a screenshot

5: Download a PNG file

## NEW QUESTION # 26

.....

Everything is changing so fast. So do not reject challenging new things. Our Databricks-Certified-Data-Analyst-Associate study materials absolutely can add more pleasure to your life. You just need a chance to walk out. You can click to see the comments of the Databricks-Certified-Data-Analyst-Associate exam braindumps and how we changed their life by helping them get the Databricks-Certified-Data-Analyst-Associate Certification. And you can also see the pass rate of our Databricks-Certified-Data-Analyst-Associate learning guide high as 98% to 100%, we can give you a promising future.
