Our products are compiled by experts from various industries and they are based on the true problems of the past years and the development trend of the industry. What's more, according to the development of the time, we will send the updated materials of B2C-Commerce-Architect test prep to the customers soon if we update the products. Under the guidance of our study materials, you can gain unexpected knowledge. Finally, you will pass the exam and get a B2C-Commerce-Architect Certification. Customers can learn according to their actual situation and it is flexible. Next I will introduce the advantages of our B2C-Commerce-Architect test prep so that you can enjoy our products.

Salesforce B2C-Commerce-Architect Certification Exam is designed to test the candidate's knowledge and skills in B2C Commerce architecture. It is an advanced-level certification that focuses on the technical aspects of designing and implementing scalable e-commerce solutions that meet business requirements. B2C-Commerce-Architect exam validates the candidate's ability to evaluate, design, and implement complex B2C Commerce Cloud solutions using industry best practices and standards.

## Salesforce B2C-Commerce-Architect Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• Design</li> <li>• Discovery: In this topic, the B2C Commerce Developer gains expertise in creating accurate technical specifications based on business requirements. It explores drafting complementary technical artifacts, reviewing implementation designs for scalability and gap analysis, and evaluating AppExchange solutions and API documentation. Additionally, it emphasizes analyzing integration points, data volume, and migration approaches while diagramming system architectures.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• Launch: This topic prepares the B2C Commerce Developer to set up SEO-compliant aliases for site domains, locales, and currencies. It includes creating rollback plans, monitoring system health during site launches, defining data replication schedules, and supporting data migration processes.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Monitoring</li> <li>• Troubleshooting: This topic equips the B2C Commerce Developer to evaluate and implement custom logging configurations using Log Center while leveraging other diagnostic tools. It emphasizes identifying and addressing performance issues like quota violations and service timeouts, as well as proactively adjusting systems for scalability and health.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Integrations and Customizations: This topic empowers the B2C Commerce Developer to identify and implement protocols like SOAP</li> <li>• REST for secure integrations with third-party web services. It also covers defining approaches for legacy code integration and AppExchange solutions.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Build: In this topic, the B2C Commerce Developer hones the ability to evaluate implementation processes to ensure alignment with business objectives. It includes validating best practices for secure, modular, and performant solutions, guiding teams in resolving complex issues, and supporting load testing to meet KPIs. The topic also covers defining processes for deploying cartridges and data to Salesforce environments.</li> </ul>

## Exam B2C-Commerce-Architect Topics - B2C-Commerce-Architect Examcollection

With the rapid market development, there are more and more companies and websites to sell B2C-Commerce-Architect guide torrent for learners to help them prepare for exam. If you have known before, it is not hard to find that the study materials of our company are very popular with candidates, no matter students or businessman. Welcome your purchase for our B2C-Commerce-Architect Exam Torrent. As is an old saying goes: Client is god! Service is first! B2C-Commerce-Architect Guide Braindumps can simulate limited-timed examination and online error correcting, and have 24/7 Service Online, B2C-Commerce-Architect Exam Torrent is the best and wisest choice for you to prepare your test.

## Salesforce Certified B2C Commerce Architect Sample Questions (Q51-Q56):

### NEW QUESTION # 51

A company is using both Service Cloud and B2C Commerce but they are not using Mulesoft or any other integration middleware and do not plan on adding that in the near future. However, there is a need to keep customer records in sync across both Service Cloud and B2C Commerce. When a change to the customer record in Service Cloud takes place, such as an updated customer name, the same customer record should be updated in B2C Commerce. Assume that there is a common ID that uniquely identifies the customer across the two systems.

How should a Solution Architect deliver the desired functionality?

- A. Send a platform event from Service Cloud and subscribe to the platform event in B2C Commerce using the built-in functionality
- B. Send an Outbound Message from Service Cloud and catch and handle the Outbound Message using the B2C Commerce APIs
- C. Use change data capture to send a message from Service Cloud and catch and handle the message using B2C Commerce Service Cloud Connector
- D. Develop a custom solution in Service Cloud to consume and communicate with B2C Commerce APIs

**Answer: A**

#### NEW QUESTION # 52

The client provided these business requirements:

- \* The B2C Commerce platform will integrate with the Client's Order Management System (OMS).
- \* The OMS supports Integration using REST services.
- \* The OMS is hosted on the Client's infrastructure.

What configurations are needed for this integration with the OMS?

- A. A service profile configuration, a WAF configuration, and a service credential configuration.
- **B. A service configuration, a service profile configuration, and a service credential configuration.**
- C. A service configuration, a service profile configuration, and a user credential configuration.
- D. A service configuration, a hostname alias configuration, and a user credential configuration.

**Answer: B**

Explanation:

For integrating the B2C Commerce platform with the client's OMS using REST services, the required configurations include:

Service Configuration: This specifies the service endpoints, HTTP methods, and any other service-specific settings necessary for the integration.

Service Profile Configuration: This defines the behavior of the service such as timeout settings, retry logic, and cache settings.

Service Credential Configuration: This involves setting up the credentials that will be used to authenticate the requests to the client's OMS. These credentials are often managed securely through encrypted storage and retrieval mechanisms.

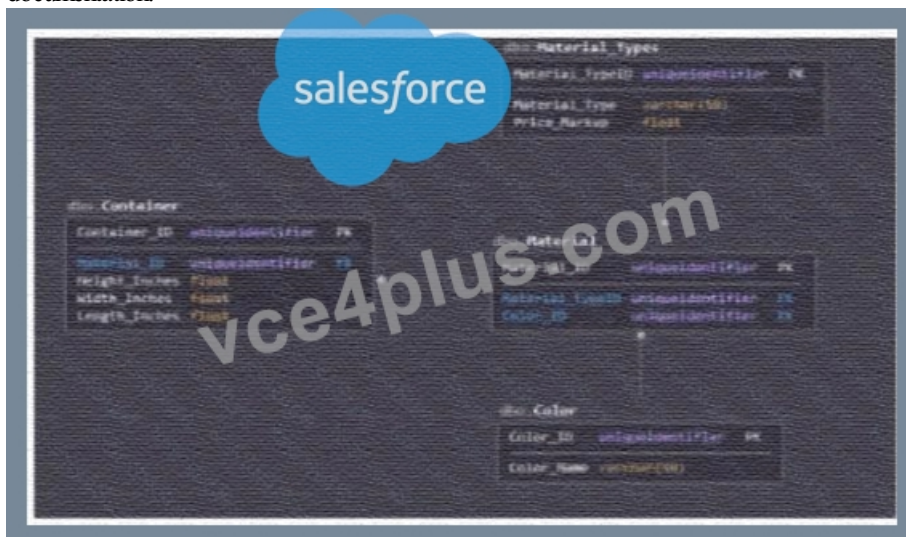

These configurations ensure secure, efficient, and reliable communication between the B2C Commerce platform and the client's OMS, adhering to best practices in web service integration.

#### NEW QUESTION # 53

The Client wants to offer custom made container products on its new B2C Commerce storefront. The Client provided two business requirements.

- \* Customer can specify container length, width, and height.
- \* Customer can specify the material that the container is made of.

The Client also provided the Architect a current data schema (shown below) for reference while preparing the technical documentation.

Which two gaps between the requirements and the data schema should the Architect discuss with the Client?

Choose 2 answers

- **A. The data schema includes unique identifiers for material and color fields, but neither are reflected in the business requirements.**
- B. The data schema includes a material Price\_Markup field, but there isn't a business requirement to factor the material cost into the final price calculation.
- **C. The data schema includes a Color\_ID field, but there isn't a business requirement to allow the customer to specify container color.**

- D. The data schema includes an implied structure that the customer's choices should be captured as custom objects, but there isn't a business requirement to do so

**Answer: A,C**

Explanation:

The provided data schema includes several fields that do not match the stated business requirements, which focus on the custom dimensions and materials of the containers:

- \* Option A: The inclusion of unique identifiers for materials and color fields in the data schema suggests a level of detail and structure around these attributes that is not reflected in the business requirements. If the business does not require tracking or differentiating materials beyond just naming them, this might be unnecessarily complex.
- \* Option D: The data schema includes a Color\_ID field, which implies the ability to specify the color of the container. However, the business requirements do not mention color as a customization option available to customers. This discrepancy needs to be addressed to ensure that the database design aligns with actual business needs.

#### NEW QUESTION # 54

An Order Management System (OMS) handles orders from multiple brandspecific sites, as part of the processing, the OMS sends the processing detail to be added at notes to the orders in B2C Commerce. These processing details are captured temporarily in custom objects, and are later processed by a batch Job that:

- \* Processes the custom object to extract the orderid and note data.
  - \* Tries to load the order.
  - \* If the order is not found, it deletes the custom object and moves on.
  - \* If the order is found, it updates notes In the Order, upon successful update of this order, it deletes the custom object.
- There is an Issue reported that the job is constantly failing and custom objects are growing in number. On investigating the production look the message below is being logged on each failure:

```
Processing of custom object 1xoskncjdw687769 failed for order 500000001 and has an associated
replacement order 100000001. Exception details:
com.demandware.core.quota.QuotaLimitExceededException: Limit for quota 'object.OrderPO.relation.notes'
exceeded. Limit is 1000, actual is 1001. at
com.demandware.core.quota.QuotaExceededException.throwLimitExceed(QuotaExceededException.java:21) at
com.demandware.core.quota.QuotaImpl.handleHardLimitViolation(QuotaImpl.java:333) at
```

What are three solution The Architect can take to fix this issue without losing meaningful data?

Choose 3 answers

- A. Using BM site import/export, softenthe<quota id="object.orderPo.relation,notes"> <custom- action>warn<custom- action> </quotes>to make sure that neither order notes are lost and custom object is processed.
- B. Take the backup of the Order as XML and delete the Order to ensure on the next job run, the custom objects are getting processed.
- C. Take the backup of the custom object and delete the custom object to ensure on the next job run the custom objects are getting processed.
- D. Engage B2C Commerce Support Team to soften the quota limit for "object.OrderPO.relation.notes"
- E. Take the backup of the Order as XML and delete the notes from Order to ensure on the next jobrun the custom objects are getting processed.

**Answer: C,D,E**

Explanation:

When facing an issue with a growing number of custom objects due to the exceeded quota limit for order notes, effective solutions include:

- \* Option C (Take the backup of the custom object and delete the custom object): This ensures that the data is preserved while freeing up space for new processes and reducing the load, allowing the job to continue running without the impediment of quota limits.
- \* Option D (Engage B2C Commerce Support Team to soften the quota limit for 'object.OrderPO.relation.notes'): Increasing the quota limit can resolve the root cause of the issue by accommodating the actual business needs without compromising the integrity of order processing and note addition.
- \* Option E (Take the backup of the Order as XML and delete the notes from Order): This allows the job to process the custom objects as intended in subsequent runs by clearing out space while ensuring the order data remains intact for business needs. These steps address the quota limit issue effectively without losing valuable order or note data, ensuring continuity and integrity of business operations.

### NEW QUESTION # 55

The storefront integrates with a REST based Address verification service (AVS) that uses token based security. The sequence of calls in the API documentation for this AVS looks like the following

1. Client authentication call, which contains the merchantId and secret in a GET request and returns a token in the response.
2. Address verification call, which contains the token and the address to verify in a POST request.

Once the token is obtained, it is valid for hours and it is not needed to request a new one for subsequent address verification calls, the AVS charges for every request made no matter if it is client authentication call or address verification call.

Which three strategies could be applied to allow for efficient use of the service without compromising security? Choose 3 answers

- A. Use HTTPService caching for the client authentication call.
- B. Use a job to store and update the token in a custom object that is used from the storefront code
- C. Apply page caching to the client authentication controller that is used with AJAX.
- D. Obtain the token from a custom cache before making the client authentication call.
- E. Obtain the token from local storage of the browser and update it once It expires.

Answer: A,B,C

### NEW QUESTION # 56

.....

For one thing, the most advanced operation system in our company which can assure you the fastest delivery speed, and your personal information will be encrypted automatically by our operation system. For another thing, with the online app version of our B2C-Commerce-Architect actual exam, you can just feel free to practice the questions in our training materials on all kinds of electronic devices. In addition, under the help of our B2C-Commerce-Architect Exam Questions, the pass rate among our customers has reached as high as 98% to 100%. We are look forward to become your learning partner in the near future.
