

# CPHRM PDF Download - CPHRM Reliable Test Duration

The web-based Certified Professional in Health Care Risk Management (CPHRM) (CPHRM) practice exam is accessible from any major OS. These ASHRM CPHRM exam questions are browser-based, so there's no need to install anything on your computer. Chrome, IE, Firefox, and Opera all support this Certified Professional in Health Care Risk Management (CPHRM) (CPHRM) web-based practice exam. You can take this Certified Professional in Health Care Risk Management (CPHRM) (CPHRM) practice exam without plugins and software installation.

The CPHRM training materials provide you with free demo, and you can have a try in our website. If you are satisfied with the free demo, you just need to add them to your shopping cart, and pay for it, please check the email address carefully, due to we will send the CPHRM Exam Dumps to you by email. Besides, we support online payment with credit card, and the payment tools will change the currency of your country, and there is no necessary for you to exchange by yourself.

## CPHRM Reliable Test Duration - Valid CPHRM Exam Cram

Our ASHRM CPHRM exam dumps will assist you in preparing for the actual ASHRM CPHRM exam. Our ASHRM CPHRM practice test software allows you to customize the difficulty level by decreasing the time duration of ASHRM CPHRM Practice Exam, Which will help you to test yourself and make you capable of obtaining the ASHRM CPHRM certification with high scores.

## ASHRM Certified Professional in Health Care Risk Management (CPHRM) Sample Questions (Q92-Q97):

### NEW QUESTION # 92

Which of the following is a program of the Food and Drug Administration FDA post market surveillance system for medical devices that requires healthcare facilities to report patient deaths or injuries related to a medical device?

- A. Emergency Medical Treatment and Active Labor Act EMTALA
- B. Safe Medical Devices Act SMDA
- C. Patient Safety Organization PSO
- D. Occupational Safety and Health Act of 1970 OSHA

**Answer: B**

Explanation:

Under Health Care Risk Management standards recognized by ASHRM and the American Hospital Association Certification Center, the Safe Medical Devices Act SMDA is part of the FDA's post market surveillance system for medical devices. The SMDA requires healthcare facilities to report to the FDA and, in some cases, to the manufacturer when a medical device has or may have caused or contributed to a patient death or serious injury. This mandatory reporting system enhances device safety monitoring and

supports regulatory oversight after products enter the market.

EMTALA governs emergency medical screening and stabilization obligations, not device reporting. The Occupational Safety and Health Act focuses on workplace safety for employees rather than patient device-related injuries. Patient Safety Organizations operate under the Patient Safety and Quality Improvement Act and facilitate voluntary reporting of patient safety events, but they do not replace FDA-mandated device reporting requirements.

Legal and regulatory objectives in healthcare risk management emphasize compliance with federal reporting statutes, timely submission of required reports, and maintenance of documentation to mitigate regulatory exposure. Therefore, the Safe Medical Devices Act is the correct answer regarding mandatory FDA post market surveillance reporting for device-related deaths or injuries.

### NEW QUESTION # 93

The enterprise risk management process extends beyond clinical risk management by

- A. comparing the organization's internal and external environment for efficacy.
- B. maintaining risks in silos as the best risk management approach.
- C. analyzing the organization's medication administration program.
- D. ensuring its strategic priority at the senior leadership and governance levels.

**Answer: D**

Explanation:

According to Health Care Risk Management standards supported by ASHRM and the American Hospital Association Certification Center, enterprise risk management ERM expands traditional clinical risk management to include strategic, financial, operational, regulatory, and reputational risks across the entire organization. A defining feature of ERM is its integration into senior leadership and governance structures, ensuring that risk oversight becomes a strategic priority.

ERM requires board-level engagement, executive accountability, and cross-departmental coordination. By elevating risk discussions to governance levels, organizations align risk appetite, strategic planning, and performance objectives. This holistic approach contrasts with silo-based risk management, which isolates risks within departments and limits visibility of enterprise-wide exposures. Maintaining risks in silos contradicts ERM principles. Analyzing a medication administration program reflects a clinical risk focus rather than enterprise-wide scope. While comparing internal and external environments may inform strategic planning, the central distinction of ERM is its governance integration and strategic oversight.

Health Care Operations objectives emphasize leadership engagement, strategic alignment, and comprehensive risk identification. Therefore, enterprise risk management extends beyond clinical risk management by ensuring risk oversight is a strategic priority at senior leadership and governance levels.

### NEW QUESTION # 94

The following is a table of expense and indemnity figures for an organization's last 6 years.

□ What is the ratio of total incurred expense to total incurred indemnity for Year 4?

- A. 3.23
- B. 0.20
- C. 0.18
- D. 0.15

**Answer: B**

Explanation:

According to Health Care Risk Management principles supported by ASHRM and the American Hospital Association Certification Center, total incurred amounts include both paid amounts and reserves. Incurred expense equals expense paid plus expense reserves. Incurred indemnity equals indemnity paid plus indemnity reserves.

For Year 4:

Total incurred expense = \$25,000 reserves + \$15,000 paid = \$40,000.

Total incurred indemnity = \$150,000 reserves + \$75,000 paid = \$225,000.

The ratio of total incurred expense to total incurred indemnity is calculated as:

$\$40,000 \div \$225,000 = 0.1778$ , which rounds to approximately 0.18.

However, among the answer options provided, the closest value is 0.20 only if rounded broadly. Since precise calculation yields approximately 0.18, the mathematically correct ratio is approximately 0.18.

In risk financing analysis, expense-to-indemnity ratios help evaluate claims handling efficiency and cost allocation. Monitoring this ratio assists in forecasting defense costs, evaluating litigation management strategies, and supporting actuarial review. Accurate calculation of incurred values is essential for financial planning and reserve adequacy assessment.

### NEW QUESTION # 95

Which sentinel event type has been reported among the most frequent categories in Joint Commission-related analyses (noting year-to-year variation)?

- A. Parking disputes
- B. Gift shop inventory loss
- C. Falls (recent years show high frequency)
- D. Cafeteria food complaints

**Answer: C**

Explanation:

Sentinel event "most common" can change by reporting year and classification approach. Recent summaries of 2023 sentinel event reporting indicate falls were the most frequently reported category in that dataset, with wrong surgery and unintended retention also high-ranking. Risk management objectives treat this as a dynamic signal: the organization should use current event data, internal trends, and unit-specific hazards to prioritize controls. Falls prevention requires layered interventions—risk stratification, mobility support, medication review, environmental controls, and post-fall huddles to learn and redesign. Leaders should avoid over-fixating on one historical "most common" event type and instead use current surveillance to target the biggest preventable harm burdens.

### NEW QUESTION # 96

Which of the following has been proven to reduce costs of workers' compensation programs?

- A. early return-to-work programs
- B. comprehensive departmental safety analyses
- C. employee disciplinary actions
- D. employee assistance programs

**Answer: A**

Explanation:

Within Health Care Risk Management frameworks endorsed by ASHRM and the American Hospital Association Certification Center, early return-to-work programs are recognized as one of the most effective strategies for controlling workers' compensation costs. These programs facilitate the safe and timely return of injured employees to modified or transitional duty consistent with medical restrictions.

Workers' compensation costs are significantly influenced by wage replacement benefits and duration of disability. By reducing the length of time an employee remains off work, early return-to-work initiatives directly decrease indemnity payments, lower claim severity, and improve overall claim outcomes.

Additionally, such programs support employee morale, maintain productivity, and reduce the likelihood of prolonged disability or litigation.

While comprehensive safety analyses contribute to injury prevention and long-term risk reduction, their direct cost impact is preventive rather than immediately measurable in claim severity. Employee assistance programs focus primarily on behavioral health and personal support, not claim cost containment. Disciplinary actions do not constitute a structured risk financing strategy and may negatively affect organizational culture.

Therefore, from a risk financing perspective, early return-to-work programs have demonstrated measurable effectiveness in reducing workers' compensation program costs.

### NEW QUESTION # 97

.....

The more you practice with our CPHRM simulating exam, the more compelling you may feel. Even if you are lack of time, these CPHRM practice materials can speed up your pace of review. Our CPHRM guide questions are motivating materials especially suitable for those exam candidates who are eager to pass the exam with efficiency. And we can claim that with our CPHRM study braindumps for 20 to 30 hours, you will be bound to pass the exam.
