NLN NEX Valid Test Topics | New Braindumps NEX Book

Pass4SureQuiz NLN NEX Exam Questions And Answers provide you test preparation information with everything you need. About NLN NEX exam, you can find these questions from different web sites or books, but the key is logical and connected. Our questions and answers will not only allow you effortlessly through the exam first time, but also can save your valuable time.

NLN Nursing Entrance Exam (Math, Science and Verbal) Sample Questions (Q61-Q66):

NEW QUESTION # 61

Animal cells contain mitochondria, while plant cells contain both mitochondria and chloroplasts. What does that tell us about their functions?

- A. Only animal cells can perform cellular respiration, and only plants can perform photosynthesis.
- B. Only animal cells can perform photosynthesis; both can perform cellular respiration.
- C. Only plant cells can perform photosynthesis; both can perform cellular respiration.
- D. Both animal and plant cells can perform photosynthesis and cellular respiration.

Answer: C

Explanation:

Mitochondria are responsible for cellular respiration, which occurs in both plant and animal cells. Chloroplasts carry out photosynthesis and are found only in plant cells. Therefore, only plants can perform photosynthesis, while both plants and animals can perform cellular respiration. This distinction is a core concept in cell biology and is frequently tested on the NEX Science exam.

NEW QUESTION # 62

Which microorganism is considered harmful or causes disease?

- A. Vector
- B. Enzyme
- C. Immune factor
- D. Pathogen

Answer: D

Explanation:

A pathogen is any microorganism that causes disease in a host. Pathogens include bacteria, viruses, fungi, and parasites. Enzymes are proteins that speed up chemical reactions and are not microorganisms. Immune factors are components of the immune system that protect against disease. A vector is an organism, such as a mosquito or tick, that transmits pathogens but does not itself cause disease. The NEX Science exam commonly assesses understanding of infectious disease terminology and distinctions between disease-causing organisms and disease carriers. Recognizing pathogens as the direct cause of illness is a key concept in microbiology and public health.

NEW QUESTION # 63

A student is traveling out of the United States to visit family living in Europe. The room booked for the trip costs €120.00 per night. Given that \$1.00 (US dollar) is equal to €1.2, how much will it cost per night in US Dollars?

- A. \$100.00
- B. \$120.01
- C. \$144.00
- D. \$120.00

Answer: A

Explanation:

This problem involves currency conversion. The exchange rate states that \$1 equals €1.2. To convert euros to dollars, divide the euro amount by 1.2. Set up the calculation: $€120 \div 1.2 = \$100$. Therefore, the cost per night in US dollars is \$100. Option C is correct. Option B incorrectly multiplies instead of dividing. Options A and D fail to account for the exchange rate. NEX math problems involving currency emphasize understanding the direction of conversion and selecting the correct operation.

NEW QUESTION # 64

Which of the following molecules is an electrolyte normally found in the blood?

- A. Iodine
- B. Ca^{2+}
- C. Lactase
- D. H_2O

Answer: B

Explanation:

Electrolytes are charged ions that help regulate nerve function, muscle contraction, and fluid balance in the body. Calcium ions (Ca^{2+}) are an important electrolyte found in the blood and play a crucial role in muscle contraction, blood clotting, and nerve signaling. Water is not an electrolyte because it does not carry a charge.

Iodine is a trace element but not a primary blood electrolyte. Lactase is an enzyme involved in digestion, not an electrolyte. The

NEX Science section often includes questions related to human physiology and emphasizes understanding ions and their roles in body function.

NEW QUESTION # 65

Reading Comprehension

Passage:

Regular exercise helps maintain bone density and muscle strength. Weight-bearing activities such as walking and resistance training are especially important in preventing osteoporosis as people age.

Which activity mentioned in the passage helps prevent bone loss?

- A. Swimming
- **B. Walking**
- C. Meditation
- D. Stretching exercises

Answer: B

Explanation:

The passage specifically mentions weight-bearing activities as being important for maintaining bone density and preventing osteoporosis. Walking is a weight-bearing exercise because the bones must support the body's weight during movement. Option C is therefore correct. The passage does not mention stretching, swimming, or meditation. While swimming is good for cardiovascular health, it is not weight-bearing. On the NEX exam, detail questions often require recognizing examples given directly in the passage rather than applying outside knowledge. Selecting walking demonstrates accurate reading and attention to detail.

NEW QUESTION # 66

.....

You can first download Pass4SureQuiz's free exercises and answers about NLN certification NEX exam as a try, then you will feel that Pass4SureQuiz give you a reassurance for passing the exam. If you choose Pass4SureQuiz to provide you with the pertinence training, you can easily pass the NLN Certification NEX Exam.
