AZ-800 Valid Exam Cram - The Best Microsoft AZ-800 Valid Exam Answers: Administering Windows Server Hybrid Core Infrastructure

Our Desktop version is an application software that runs without an internet connection. It helps you to test yourself by giving the Administering Windows Server Hybrid Core Infrastructure (AZ-800) practice test. Our desktop version also keeps a record of your previous performance and it shows the improvement in your next AZ-800 Practice Exam. With the help of DumpsActual Administering Windows Server Hybrid Core Infrastructure (AZ-800) exam questions, you will be able to pass Microsoft AZ-800 certification exam with ease. When you invest in our product it will surely benefit your Administering Windows Server Hybrid Core Infrastructure (AZ-800) exam dumps.

Earning the Microsoft AZ-800 Certification demonstrates to employers and colleagues that you have the skills and knowledge needed to administer and manage hybrid cloud infrastructures. It also provides a pathway to higher-level certifications, such as the

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q121-Q126):

NEW QUESTION # 121

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains 10 servers that run Windows Server. The servers have static IP addresses.

You plan to use DHCP to assign IP addresses to the servers.

You need to ensure that each server always receives the same IP address.

Which type of identifier should you use to create a DHCP reservation for each server?

- A. fully qualified domain name (FQDN)
- B. NetBIOS name
- C. MAC address
- D. universally unique identifier (UUID)

Answer: C

Explanation:

Reference:

<https://docs.microsoft.com/en-us/powershell/module/dhcpserver/add-dhcpserverv4reservation?view=windowsserver2022-ps>

NEW QUESTION # 122

You have a server named Server1 that runs Windows Server.

You plan to host applications in Windows containers.

You need to configure Server1 to run containers.

What should you install?

- A. the Windows Subsystem for Linux
- B. Hyper-V
- C. Windows Admin Center
- D. Docker

Answer: D

Explanation:

<https://learn.microsoft.com/en-us/virtualization/windowscontainers/quick-start/set-up-environment?tabs=dockerce#prerequisites>

NEW QUESTION # 123

Your on-premises network contains an Active Directory domain named contoso.com. You have an Azure AD tenant. You plan to sync contoso.com with the Azure AD tenant by using Azure AD Connect cloud sync. You need to create an account that will be used by Azure AD Connect cloud sync. Which type of account should you create?

- A. user
- B. InetOrgPerson
- C. group managed service account (gMSA)
- D. system-assigned managed identity

Answer: C

Explanation:

In the AZ-800/"Administering Windows Server Hybrid Core Infrastructure" content, Azure AD Connect cloud sync uses a lightweight provisioning agent that reads from on-premises AD DS. The agent runs under a Group Managed Service Account (gMSA) so it can securely obtain and rotate credentials automatically. The implementation guidance states that during agent installation you provide domain admin credentials once so the installer can create and delegate a gMSA for the agent; alternatively, you can pre-create the gMSA and assign it. The documentation emphasizes that cloud sync does not rely on user or computer accounts with static passwords; instead it "deploys a gMSA for the agent service to ensure secure, automatic password management

and least-privilege directory access." System-assigned managed identities apply to Azure resources only (not on-prem AD DS), and InetOrgPerson is an object class for users, not a service identity. A regular user account would introduce password management and rotation issues and is not the recommended nor required identity type for the cloud sync agent. Therefore, to satisfy Azure AD Connect cloud sync prerequisites, you create and use a gMSA.

NEW QUESTION # 124

Your network contains an Active Directory domain, a web app named App1, and a perimeter network. The perimeter network contains a server named Server1 that runs Windows Server.

You plan to provide external access to App1.

You need to implement the Web Application Proxy role service on Server1.

Which role should you add to Server1, and which role should you add to the network? To answer, drag the appropriate roles to the correct targets. Each role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

NEW QUESTION # 125

You have a server named Server1 that runs Windows Server. Server1 has a just-a-bunch-of-disks (JBOD) enclosure attached.

You plan to create a storage pool on Server1 and a virtual disk that will use a mirror layout.

You are considering whether to use a two-way or a three-way mirror layout.

What is the minimum number of disks required for each type of mirror layout? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:
