As we all, having a general review of what you have learnt is quite important, it will help you master the knowledge well. CT-UT Online test engine has testing history and performance review, and you can have a review through this version. In addition, CT-UT Online test engine supports all web browsers and Android and iOS etc. CT-UT Exam Materials of us offer you free demo to have a try before buying CT-UT training materials, so that you can have a deeper understanding of what you are going to buy. You can receive your downloading link and password within ten minutes, so that you can begin your study right away.

## ISTQB CT-UT Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• Risks in Usability, User Experience and Accessibility: This domain assesses the ability of Risk Analysts to identify and analyze common risks that can affect usability, user experience, and accessibility. It differentiates between product risks—such as users being unable to use a product effectively—and project risks, including lack of expertise or insufficient usability evaluation processes. Understanding these risks helps in planning effective usability testing and evaluation.</li> </ul>

Topic 2	<ul style="list-style-type: none"> <li>• Usability and Accessibility Standards: This part addresses the knowledge required by Compliance Officers regarding standards and guidelines that govern usability and accessibility. It introduces ISO standards like ISO 9241-110 and ISO 9241-171, manufacturer guidelines from major platforms, and web accessibility guidelines such as WCAG. It also touches on legislation relevant to accessibility requirements, such as the UK Equality Act and the Americans with Disabilities Act.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Basic Concepts: This section measures the skills of Usability Analysts and covers fundamental definitions and ideas related to usability, user experience, and accessibility. It explains what usability means in terms of effectiveness, efficiency, and satisfaction within software products. User experience concepts related to emotions, perceptions, and responses before, during, and after use are included. It also addresses accessibility, focusing on usage by people with diverse abilities.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Selecting Appropriate Methods: This domain helps Test Managers make decisions on which usability evaluation methods to apply depending on project context, resources, and maturity. It discusses criteria for selecting usability, user experience, and accessibility evaluation methods suited to different stages of development and organizational needs, including agile development scenarios.</li> </ul>

## CT-UT Visual Cert Test, CT-UT Popular Exams

The versions of our product include the PDF version, PC version, APP online version. Each version's using method and functions are different and the client can choose the most convenient version to learn our CT-UT exam materials. For example, the PDF version is convenient for you to download and print our CT-UT test questions and is suitable for browsing learning. If you use the PDF version you can print our CT-UT test torrent on the papers and it is convenient for you to take notes. You can learn our CT-UT Test Questions at any time and place. The APP online version is used and designed based on the web browser. Any equipment can be used if only they boost the browser. It boosts the functions to stimulate the exam, provide the time-limited exam and correct the mistakes online. There are no limits for the equipment and the amount of the using persons to learn our CT-UT exam materials. You can decide which version to choose according to your practical situation.

## ISTQB Certified Tester Usability Tester Sample Questions (Q11-Q16):

### NEW QUESTION # 11

How can the approach for conducting user surveys be summarized best?

- A. Write survey plan, interview users and stakeholders, select questionnaire, deploy questionnaire, analyze, communicate
- B. Write survey plan, write schedule, select questionnaire, recruit users, analyze, communicate
- C. Write survey plan, write schedule, select questionnaire, recruit users, remind users, communicate
- D. Write survey plan, interview users and stakeholders, select questionnaire, recruit users, remind users, communicate

**Answer: A**

Explanation:

Conducting user surveys involves a structured approach that ensures data collection is effective, reliable, and meaningful. The process typically starts with writing a survey plan, which defines the objectives, scope, target population, and methodology. Next, interviewing users and stakeholders is important to gather qualitative insights, refine survey questions, and align the survey with business goals and user needs.

Selecting or designing the questionnaire follows, which includes crafting clear, unbiased questions to capture the desired data. After that, deploying the questionnaire to the recruited participants is essential; this can be done via email, online tools, or in-person, depending on the context. Once the data is collected, it must be analyzed to extract meaningful patterns, trends, and insights. Finally, communicating the findings to stakeholders completes the process by informing decision-making.

Other options miss critical steps such as deploying the questionnaire (Option C), or combine steps incorrectly (Options A and D). Importantly, the step of interviewing users and stakeholders prior to deployment ensures the survey is well-informed and targeted, enhancing the quality and relevance of data collected.

### NEW QUESTION # 12

Which of the following are common mistakes made in usability testing?

- i. The user is too active
- ii. Critical results are ignored
- iii. No observers involved
- iv. Scheduling too late
- v. Incorrect focus

- A. i, ii & iii are true, iv & v are false
- **B. ii, iv & v are true, i & iii are false**
- C. ii & iv are true, i, iii & v are false
- D. i & iii are true, ii, iv & v are false

**Answer: B**

Explanation:

Common mistakes in usability testing include:

Ignoring critical results (ii): A significant issue if findings are not acted upon.

Scheduling the test too late (iv): This can lead to usability problems being discovered too late to be addressed effectively.

Having the wrong focus (v): For instance, focusing on aesthetics instead of usability goals.

Option i ("user is too active") is not a problem-active participation is necessary. Option iii ("no observers involved") is not a typical mistake, since tests can still be valid even with recorded sessions and later review.

Hence, the correct answer is A: ii, iv & v are true.

#####

### NEW QUESTION # 13

As an expert for usability, you're in charge of the usability part of the development of a business application for a large customer. You have worked as a usability expert with the development team for two years and are operating well together; the developers value your feedback and give their bests implementing your suggestions. The product is in an early stage, so there's only a rudimentary prototype available.

Given this information, what is the best approach to verify the usability at the current stage?

- A. Unmoderated usability test
- B. Usability maturity assessment
- **C. Usability review**
- D. Usability test in the lab

**Answer: C**

Explanation:

At an early development stage where only a rudimentary prototype exists, a usability review (e.g., expert or heuristic review) is the most effective method. It allows usability specialists to identify potential usability issues without the need for a fully functioning product. Reviews can provide immediate, actionable feedback to guide design improvements before moving into more resource-intensive usability testing. An unmoderated usability test (B) or lab test (D) may be impractical at this stage due to limited interactivity. A usability maturity assessment (C) evaluates organizational processes and is not applicable to evaluating a specific prototype.

Usability.gov: Usability Evaluation Types

### NEW QUESTION # 14

A "usability requirement" is:

- A. A requirement needed for a usability tester
- B. A requirement needed to define the size of a mobile phone used in a usability test
- **C. A requirement on the usability of a component or system**
- D. A requirement how to conduct a usability test

**Answer: C**

Explanation:

A usability requirement specifies how usable a product or component must be, often in terms of effectiveness, efficiency, and user satisfaction, as defined in ISO 9241-11. These requirements ensure that the product meets specific human-centered design goals, such as allowing users to complete tasks accurately and quickly.

Options A and C describe procedural or test setup elements, not actual usability requirements. Option B refers to personnel qualifications, which are not the same as usability requirements related to system behavior or performance.

#####

### NEW QUESTION # 15

You are asked to evaluate the usability of a software application for a law firm. Due to time and budget constraints, it is not possible to include users in the evaluation process.

Which of the following is a valid approach for evaluating the usability in this case?

- A. Accessibility Evaluation
- **B. Usability Review**
- C. User surveys
- D. Usability testing

**Answer: B**

Explanation:

When actual users cannot be included, a usability review (often an expert or heuristic evaluation) is the most practical method.

Trained evaluators examine the interface against usability principles and standards to identify potential issues. Surveys require user input, and usability testing cannot proceed without users.

Accessibility evaluation targets inclusivity for users with impairments, which is related but not a substitute for overall usability evaluation. Therefore, option A is the only valid method under these constraints.
