NEW QUESTION # 52

When you maintain authorizations for SAPUI5 Fiori apps, which of the following object types is the front-end authorization object type?

- A. TADIR INA1 - InA Service
- B. TADIR G4BA - SAP Gateway Odata V4 Backend Service Group & Assignments
- **C. TADIR IWSV - SAP Gateway Business Suite Enablement-Service**
- D. TADIR IWSG - SAP Gateway: Service Groups Metadata

Answer: C

Explanation:

For SAPUI5 Fiori apps, the front-end authorization object type is TADIR IWSV (SAP Gateway Business Suite Enablement-Service). This object type represents the OData services used by Fiori apps on the front-end server, and its authorization is managed via the S_SERVICE authorization object in PFCG roles. The IWSV type specifically defines the services that the front-end server calls to access back-end data, requiring start authorizations and default values to be included in the role. TADIR IWSG is used for service group metadata, not front-end authorizations, and TADIR G4BA pertains to OData V4 services, which are less common in standard SAPUI5 Fiori apps. TADIR INA1 is related to InA (Information Access) services, not typical Fiori app authorizations. By using IWSV, SAP ensures that front-end authorizations are correctly aligned with the OData services powering Fiori apps, providing secure and efficient access control in SAP S/4HANA systems.
