Get instant Success With Salesforce AP-219 Exam Questions [2026]

Once you learn all AP-219 questions and answers in the study guide, try TrainingDumps's innovative testing engine for exam like AP-219 practice tests. These tests are made on the pattern of the AP-219 real exam and thus remain helpful not only for the purpose of revision but also to know the real exam scenario. To ensure excellent score in the exam, AP-219 Braindumps are the real feast for all exam candidates. They contain questions and answers on all the core points of your exam syllabus. Most of these questions are likely to appear in the AP-219 real exam.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q55-Q60):

NEW QUESTION # 55

An admin is observing a flow and needs to watch all of the variables changing as the process executes, but nothing like this is being displayed. What did the developer forget to enable?

- A. Show execution details inline
- B. Show the details of what's executed and render flow in Lightning Runtime
- C. Show execution details
- D. Show the details of what's executed and render flow in Lightning Experience

Answer: B

NEW QUESTION # 56

An administrator has created a new currency field on the Fulfillment Order object and wants to roll up the total to the Order Summary object. When creating a rollup field on the Order Summary object, Fulfillment Order does not appear as an option. Why is this?

- A. The Order Summary field on the Fulfillment Order object is a Lookup
- B. The Rollup Summary field must be created on the Fulfillment Order object with the Order Summary object as the parent
- C. Rollup Fields cannot sum Currency Fields
- D. The Order Summary object has reached the limit of Rollup Summary fields

Answer: A

Explanation:
The reason why Fulfillment Order does not appear as an option when creating a rollup field on the Order Summary object is that the Order Summary field on the Fulfillment Order object is a Lookup. A Lookup field is a type of custom field that creates a relationship between two objects, but does not support rollup summary fields. To create a rollup summary field, the relationship between the objects must be master-detail, which means that the child record cannot exist without its parent record. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.custom_field_types.htm&type=5https://help.salesforce.com/s/articleView?id=sf.fields_about_roll_up_summary_fields.htm&type=5

NEW QUESTION # 57

An administrator is configuring delivery methods. What two types of records need to be created?

- A. Order Delivery Method
- B. Order Delivery Summary
- C. Delivery Method
- D. Product Summary
- E. Product

Answer: A,C

Explanation:
The Order Delivery Method and Delivery Method objects are used to configure delivery methods for orders. A delivery method is a way of delivering an order to a customer, such as standard shipping, express shipping, or in-store pickup. A Delivery Method record defines the name, description, type, and cost of a delivery method. An Order Delivery Method record associates an order with a delivery method and stores additional information such as the delivery address, tracking number, and status. Reference: Order Management Objects, [Delivery Methods]

NEW QUESTION # 58

What are two items that an administrator should consider when building out a flow for one location vs multiple locations?

- A. Having multiple locations mandates writing custom Apex code
- B. Multiple locations can lead to limit exceptions
- C. Multiple locations will introduce nested loops which can make the canvas substantially larger
- D. A default warehouse location should be set first in flows handling multiple locations

Answer: B,C

Explanation:

When building a flow for multiple locations, an administrator should consider the following challenges:

Multiple locations will introduce nested loops which can make the canvas substantially larger. For example, a flow that handles multiple fulfillment orders per order and multiple fulfillment order lines per fulfillment order will need to loop through both levels of records. This can make the flow more complex and harder to maintain.

Multiple locations can lead to limit exceptions. For example, a flow that queries or updates a large number of records across multiple locations may hit the SOQL query limit or the DML statement limit. To avoid this, an administrator should use bulkified actions and optimize the flow performance. Reference: Order Fulfillment Flows, [Flow Performance Best Practices]

NEW QUESTION # 59
Which object is used to createan invoice?

- A. Order Summary
- B. Shipment
- C. Fulfillment Order
- D. Order

Answer: A

Explanation:

The Order Summary object is used to create an invoice. An invoice is a document that requests payment from a customer for an order. An invoice can include one or more fulfillment orders and one or more credit memos. A fulfillment order is a record that represents a part of an order that is fulfilled by a specific location. A credit memo is a record that represents a partial or full refund for an order or a fulfillment order. To create an invoice, an administrator can use the Create Invoice Apex action in a flow. The Create Invoice Apex action requires the Order Summary ID as an input parameter and creates an Invoice record associated with the Order Summary record. Reference: Order Management Objects, [Create Invoice Apex Action]

NEW QUESTION # 60
......

The AP-219 certificate is the bridge between "professional" and "unprofessional", and it is one of the ways for students of various schools to successfully enter the society and embark on an ideal career.
