Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q17-Q22):

NEW QUESTION # 17
What is the main function of ACP?

- A. It allows the controller to use Ethernet instead of SAS to fetch storage data.
- B. It allows cabling the shelf to two additional controllers.
- C. It enables automatic shelf ID assignment.
- D. It allows the controller to nondisruptively reset the SAS expanders.

Answer: D

Explanation:
Alternate Control Path (ACP) provides an out-of-band management path to disk shelves, allowing ONTAP to monitor and reset SAS expanders nondisruptively. It does not carry data traffic and does not assign shelf IDs.

NEW QUESTION # 18
You have a 2-node FAS8300 ONTAP 9.8 cluster that serves SMB shares. You are configuring interface groups for higher performance and resiliency.
Which two NetApp best practices should you follow to satisfy these performance and resiliency requirements? (Choose two.)

- A. Use ports from different NICs.
- B. Use ports with the same chipsets.
- C. Use ports with different chipsets.
- D. Use ports from the same NICs.

Answer: A,B

Explanation:
Using ports from different NICs protects against single NIC failure, while using the same chipset ensures consistent performance characteristics. This combination maximizes resiliency and performance.

NEW QUESTION # 19
Poppy Pet Care Kennels is developing a website system. The following are potential actors:
A) Poppy Pet Care Kennels
B) Kennel assistants
C) The managing director
D) Customers
E) Quality manager
Which of these would be drawn as actors on the use case diagram?

- A. B, C and E
- B. A, B and C
- C. A, D and E
- D. B, D and E

Answer: D

Explanation:
Actors are external users interacting with the system. Kennel assistants, customers, and the quality manager directly interact with the system. The organization itself and managing director are stakeholders, not actors.

NEW QUESTION # 20
You have a 2-node switchless cluster named clusterA. You are planning on adding two additional nodes to clusterA.
What must you consider before you add the additional nodes to clusterA?

- A. Convert clusterA to a switched cluster by migrating the data LIFs from direct connect to the cluster interconnect switch.
- B. Convert clusterA to a switched cluster by migrating the cluster LIFs from direct connect to the cluster interconnect switch.
- C. Convert clusterA to a single-node cluster.
- D. Use direct connect to add the additional nodes to clusterA.

Answer: B

Explanation:
A 2-node switchless cluster is limited to two nodes and uses direct connections for cluster LIFs. Before adding additional nodes, ONTAP requires converting the environment into a switched cluster.
This conversion involves installing cluster interconnect switches and migrating the cluster LIFs from direct connections to the new cluster interconnect switches. Data LIFs are not involved in cluster communication and do not need migration for cluster expansion.

Direct connect cannot support more than two nodes, and converting to a single-node cluster is invalid.
Therefore, the correct answer is C.

NEW QUESTION # 21

A new AFF8200 has a four-port UTA2 adapter installed in slot 2, configured for FC.
Which port names are correct?

- A. 2a, 2b, 2c, 2d
- B. e2a/2a, e2b/2b, e2c/2c, e2d/2d
- C. e0a/0a, e0b/0b, e0c/0c, e0d/0d
- D. e2a, e2b, e2c, e2d

Answer: B
