

Fast Download EX380 Reliable Exam Simulations | Verified EX380 New Braindumps: Red Hat Certified Specialist in OpenShift Automation and Integration

TorrentValid provides the three most convenient formats to prepare for EX380 exam dumps. It offers a desktop practice test, web based practice test and pdf file. Therefore, feel free to go through Red Hat Certified Specialist in OpenShift Automation and Integration (EX380) exam dumps. Each of the three formats is downloaded to all android devices. Therefore, there's no reason to download an additional application to access web-based or desktop-based practice tests.

RedHat EX380 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Manage workloads with cluster partitioning: Covers dedicating cluster nodes to specific workloads by configuring node pools, machine configurations, and special-purpose operators.
Topic 2	<ul style="list-style-type: none">• Back up and restore applications with OpenShift API for Data Protection (OADP): Covers deploying OADP, performing full application backups including data and resources, using volume snapshots, and scheduling and restoring backups.
Topic 3	<ul style="list-style-type: none">• Manage workloads with pod scheduling: Covers controlling where pods run using taints, tolerations, labels, selectors, affinity rules, and pod disruption budgets to ensure workload placement and resiliency.

EX380 New Braindumps | EX380 Latest Test Answers

The online version of our EX380 exam questions is convenient for you if you are busy at work and traffic. Wherever you are, as long as you have an access to the internet, a smart phone or an I-pad can become your study tool for the EX380 exam. This version can also provide you with exam simulation. And the good point is that you don't need to install any software or app. All you need is to click the link of the online EX380 Training Material once, and then you can learn and practice offline.

RedHat Red Hat Certified Specialist in OpenShift Automation and Integration Sample Questions (Q32-Q37):

NEW QUESTION # 32

Configure log forwarding to an external endpoint

Task Information : Configure Cluster Logging to forward application logs to an external output using ClusterLogForwarder.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Verify logging namespace and resources
- * `oc get ns openshift-logging`
- * `oc -n openshift-logging get clusterlogforwarder`
- * ClusterLogForwarder configures pipelines and outputs.
- * Create/Edit ClusterLogForwarder (example structure)
- * Define an output (external system) and pipeline selecting application logs.
- * Apply via YAML:
- * `oc -n openshift-logging apply -f clusterlogforwarder.yaml`
- * Validate collector pods are healthy
- * `oc -n openshift-logging get pods`
- * Forwarding relies on collectors (vector/fluentd depending config).
- * Generate a test log line
- * `oc -n openshift-logging run logger --image=busybox --restart=Never -- /bin/sh -c 'echo hello- forwarding; sleep 5'`
- * This creates a known message to search in the external endpoint.
- * Confirm logs arrive at destination
- * Use your external system's query/search to confirm hello-forwarding.

NEW QUESTION # 33

GitOps and MachineConfig - Trigger Argo CD Synchronization by Repository Update

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Confirm that the repository being pushed to is the same repository watched by the GitOps/Argo CD application.

This linkage is essential because GitOps acts only on configured source repositories and paths.

Step 2: Commit the MachineConfig changes.

The lab uses:

```
git commit -am "Add MachineConfig for motd"
```

Step 3: Push the changes to the tracked branch.

The lab uses:

```
git push origin main
```

Step 4: Allow Argo CD to detect the repository change and begin synchronization.

In a standard GitOps model, the controller compares the Git repository to the cluster state and applies drift correction or new desired resources.

Detailed explanation:

This sub Task SIMULATION is the operational purpose behind the previous Git command Task SIMULATION . The point is not merely to store a file in Git; it is to update the declarative source that Argo CD uses to reconcile the cluster. Once the repository is updated, Argo CD detects the new commit and syncs the MachineConfig into the cluster according to its application definition. This demonstrates a core automation principle in OpenShift GitOps: administrators do not treat the cluster as the primary editable surface. Instead, they modify Git and let the automation layer enforce state. That provides traceability, peer review potential, rollback capability, and consistency across environments.

NEW QUESTION # 34

Configure and synchronize OpenShift groups from LDAP (group sync)

Task Information : Create an LDAP group-sync config, run a one-time sync, and confirm groups exist in OpenShift.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Create a group sync config file (example groupsync.yaml)
- * This file defines how OpenShift queries LDAP for groups and members.

- * Run a one-time group sync
- * `oc adm groups sync --sync-config=groupsync.yaml --confirm`
- * `--confirm` actually applies changes (without it, it's a dry-run preview).
- * Verify groups created/updated
- * `oc get groups`
- * `oc describe group < groupname >`
- * Confirms group objects exist and membership is present.

NEW QUESTION # 35

Create a full application backup (resources + PV data)

Task Information : Create a Velero backup of namespace orders including PV snapshots.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Confirm resources and PVCs exist
- * `oc -n orders get all`
- * `oc -n orders get pvc`
- * Ensures there is something meaningful to back up.
- * Create backup including volume snapshots
- * `velero backup create orders-full --include-namespaces orders --snapshot-volumes`
- * Captures Kubernetes objects and requests PV snapshots where supported.
- * Check status/details
- * `velero backup describe orders-full --details`
- * `velero backup logs orders-full`
- * Review warnings/errors and confirm snapshot actions.

NEW QUESTION # 36

Maintain group synchronization on a schedule (CronJob)

Task Information : Create a CronJob that runs LDAP group sync on a schedule using a service account that has the required permissions.

Answer:

Explanation:

See the solution below in Explanation:

Explanation:

- * Create a namespace for the sync job
- * `oc new-project id-sync`
- * Keeps the automation components organized.
- * Create a service account for the sync job
- * `oc -n id-sync create sa group-sync`
- * CronJob runs under this SA identity.
- * Grant cluster permissions to manage groups
- * `oc adm policy add-cluster-role-to-user cluster-admin systemserviceaccount:id-sync:group-sync`
- * In real environments you should scope down, but lab Task SIMULATIONS often accept cluster-admin for speed.
- * Create a ConfigMap for `groupsync.yaml` and Secret(s) for bind password/CA
- * Mount them into the job container.
- * Create CronJob to run group sync
- * Command inside job:
- * `oc adm groups sync --sync-config=/config/groupsync.yaml --confirm`
- * The CronJob ensures periodic reconciliation with LDAP.
- * Verify job runs
- * `oc -n id-sync get cronjob`
- * `oc -n id-sync get jobs`
- * `oc -n id-sync logs job/ < job-name >`

NEW QUESTION # 37

.....

TorrentValid RedHat EX380 Exam Training materials can help you to come true your dreams. Because it contains all the questions of RedHat EX380 examination. With TorrentValid, you could throw yourself into the exam preparation completely. With high quality training materials by TorrentValid provided, you will certainly pass the exam. TorrentValid can give you a brighter future.
