Our Designing Cisco Enterprise Wireless Networks (300-425) PDF file is portable which means customers can carry this real questions document to any place. You just need smartphones, or laptops, to access this Designing Cisco Enterprise Wireless Networks (300-425) PDF format. These Designing Cisco Enterprise Wireless Networks (300-425) questions PDFs are also printable. So candidates who prefer to study in the old way which is paper study can print Designing Cisco Enterprise Wireless Networks (300-425) questions PDF as well.

Cisco 300-425 certification exam, also known as Designing Cisco Enterprise Wireless Networks, is a popular certification exam for IT professionals seeking to validate their skills in designing, deploying, and configuring enterprise wireless networks. Designing Cisco Enterprise Wireless Networks certification exam is designed for network professionals who are responsible for designing and implementing wireless networks in large organizations. 300-425 Exam covers a wide range of topics, including wireless network design, deployment, security, and troubleshooting.

300-425 Training Materials & 300-425 Exam Torrent & 300-425 Study Guide

With the 300-425 certification exam you can climb up the corporate ladder faster and achieve your professional career objectives. Do you plan to enroll in the Cisco 300-425 certification exam? Looking for a simple and quick way to crack the 300-425 test? If

your answer is yes then you need to start Cisco 300-425 Test Preparation with Cisco 300-425 PDF Questions and practice tests. With the Exams4Collection Designing Cisco Enterprise Wireless Networks 300-425 practice test questions you can prepare yourself shortly for the final Cisco 300-425 exam.

Cisco Designing Cisco Enterprise Wireless Networks Sample Questions (Q280-Q285):

NEW QUESTION # 280

A high-density wireless network is designed. Which Cisco WLC configuration setting must be incorporated in the design to encourage clients to use the 5 GHz spectrum?

- A. RRM
- B. load balancing
- C. Band Select
- D. Cisco Centralized Key Management

Answer: C

Explanation:

Band Select will impact the initial scan, steering clients towards 5 GHz.

NEW QUESTION # 281

A new wireless network design has these requirements:

- * AireOS WLCs as guest anchors
- * a Cisco Catalyst 9800 Series WLC as the foreign controller
- * use of Wi-Fi 6 APs
- * inter-controller roaming for guest users

Which two design approaches meet these requirements? (Choose two.)

- A. Use WLC software versions that support IRCM.
- B. Use AVC on the anchor WLCs.
- C. Use secure mobility to pair controllers.
- D. Use EoIP for communication between controllers.
- E. Use IPv6 across the wireless network.

Answer: A,D

Explanation:

EoIP (Ethernet over IP) is used for communication between controllers in a guest anchor setup, allowing for seamless roaming. Inter-Controller Roaming Mechanism (IRCM) support is necessary for the controllers to facilitate roaming across different wireless LAN controllers.

NEW QUESTION # 282

An engineer must ensure that the new wireless LAN deployment can support seamless roaming between access points using a standard based on an amendment to the 802.11 protocol. Which protocol must the engineer select?

- A. 802.11r
- B. 802.11e
- C. 802.11i
- D. 802.11ac

Answer: A

Explanation:

NEW QUESTION # 283

An enterprise is using two wireless controllers to support the wireless network. The data centre is located in the head office. Each controller has a corporate WLAN configured with the name `Copr-NET390595865WLC-1` and `Copr-NET68371638WLC-2`. The APs are installed using a round-robin approach to load balance the traffic. What should be changed on the configuration to optimize roaming?

- A. Place the access points per floor on the same controller.
- B. Use the same WLAN name for the corporate network on both controllers.
- C. Move all access points to one controller and use the other as N+1 HA.
- **D. Use the same WLAN name for the corporate network on both controllers.**

Answer: D

Explanation:

To optimize roaming in a wireless network with multiple controllers, it is essential to use the same WLAN name (SSID) across all controllers. This allows clients to roam seamlessly between access points managed by different controllers without having to re-authenticate or experience disconnections.

NEW QUESTION # 284

An enterprise is using the wireless network as the main network connection for corporate users and guests. To wireless network availability. Two Standalone controllers are installed in the head office. APs are connected to the controllers using a round-robin approach to load balance the traffic. After a power cut, the wireless clients disconnect while roaming. An engineer tried eping from the controller but fails. Which protocol needs to be allowed between the networks that the controllers are installed?

- A. IP Protocol 67
- B. IP Protocol 87
- C. IP Protocol 77
- **D. IP Protocol 97**

Answer: D

Explanation:

Mobility data traffic is carried via Ethernet over IP (EoIP) which is IP protocol 97. This is the IP protocol number, not a TCP/UDP port value. CISCO

NEW QUESTION # 285

.....

Our company is a professional certificate exam materials provider, we have occupied in the field for years, and we also famous for providing high-quality exam dumps. 300-425 training materials have the questions and answers, and it will be convenient for you to check your answer. In addition, the pass rate for 300-425 Exam Braindumps is 98.75%, and we can guarantee you pass the exam just one time. If you fail to pass the exam, we will refund your money. We also offer you free update for one year after purchasing, and the update version for 300-425 training materials will be sent to you automatically.
