PRINCE2 Agile Foundation Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which practice supports identification and assessment of uncertainties?

- A. Plans
- B. Quality
- **C. Risk**
- D. Business case

Answer: C

Explanation:

In Agile Foundation guidance, the risk practice is explicitly responsible for the identification, assessment, and management of uncertainties, making option A the correct answer. Risk is defined as uncertainty that, if it occurs, will have a positive or negative impact on objectives. Agile recognizes that uncertainty is inherent in complex and adaptive work, so effective risk management is essential to successful delivery.

The risk practice focuses on proactively identifying uncertainties early, assessing their likelihood and impact, and determining appropriate responses. Agile Foundation documents emphasize that risk management in Agile is continuous rather than a one-time activity. Risks are regularly reviewed, updated, and addressed throughout the lifecycle as new information emerges. This aligns with Agile principles of transparency, inspection, and adaptation, allowing teams to respond to uncertainty in a timely and informed manner.

Option B, plans, focuses on outlining how objectives will be achieved and how work will be organized over time. While planning may take risks into account, it does not primarily identify or assess uncertainties. Option C, quality, ensures that outputs meet agreed standards and acceptance criteria but does not deal directly with uncertainty. Option D, business case, justifies why a project should proceed by outlining costs, benefits, and risks at a high level, but it does not actively manage or assess uncertainties on an ongoing basis.

Agile Foundation guidance highlights that Agile approaches often reduce risk by delivering incrementally, seeking early feedback, and validating assumptions quickly. However, this does not eliminate the need for a structured risk practice. Instead, risk management supports Agile delivery by making uncertainties visible and manageable. By embedding risk identification and assessment into regular team activities, organizations can make better decisions, protect value, and increase confidence among stakeholders while still maintaining flexibility and responsiveness to change.

NEW QUESTION # 25

Which Agile approach is an iterative and timeboxed approach to product delivery?

- A. Agilometer
- **B. Scrum**
- C. Kanban
- D. Lean

Answer: B

Explanation:

Agile Foundation guidance clearly identifies Scrum as an iterative and timeboxed approach to product delivery, making option A the correct answer. Scrum is built around fixed-length iterations called sprints, which are typically one to four weeks long. These timeboxes create a regular cadence for planning, development, review, and improvement, enabling teams to deliver usable increments of a product frequently and predictably.

Scrum emphasizes iterative delivery by breaking complex work into smaller, manageable pieces that can be completed within a sprint. Each sprint begins with planning, where the team selects work from the product backlog, and ends with a review and retrospective. This structure supports frequent inspection of both the product and the team's way of working, allowing for continuous adaptation based on feedback and learning. Agile Foundation documents highlight that timeboxing is a key mechanism in Scrum, helping teams focus, limit work in progress, and reduce risk.

Option B, Kanban, is not timeboxed. Kanban focuses on continuous flow, visualizing work, and limiting work in progress rather than delivering in fixed iterations. Option C, the Agilometer, is an assessment tool used to evaluate suitability and risks of Agile adoption, not a delivery approach. Option D, Lean, is a broader philosophy focused on eliminating waste and optimizing value flow; while it can influence Agile delivery, it is not inherently iterative and timeboxed in the way Scrum is.

Agile Foundation materials stress that Scrum's iterative and timeboxed nature supports transparency, predictability, and early value delivery. By delivering small increments regularly, teams can gather feedback early, reduce uncertainty, and adapt priorities as needs change. This makes Scrum particularly effective in environments where requirements evolve and learning is essential.
