AP-222信息資訊 & 免費下載AP-222考題

每個需要通過AP-222考試認證的考生都知道, 這次的認證關係著他們人生的重大轉變, 我們PDFExamDumps提供的考試認證培訓資料是用超低的價格和高品質的擬真試題和答案來奉獻給廣大考生, 我們的產品還具備成本效益, 並提供了一年的免費更新期, 我們認證培訓資料都是現成的。我們網站是答案轉儲的領先供應商, 我們有你們需要的最新最準確的考試認證培訓資料, 也就是答案和考題。

最新的 Accredited Professional AP-222 免費考試真題 (Q45-Q50):

問題 #45

Bohabaven wants to implement the Grants Management module of Public Sector Solutions. They would like to allow constituents to apply online for grants and check the progress of grant applications. The Chief Marketing Officer and Head of Constituent Services have expressed their concerns about the security of the solution. They want to ensure they comply with privacy regulations around the storage and use of constituent's data, and they are wondering how to protect against bots potentially spamming the application forms. What should the Technical Consultant suggest to Bohabaven to protect the application forms?

- A. Implement spam checking for Bohabaven's Experience Site forms using CAPTCHA.
- B. Set the external organization-wide default sharing settings for grant applications objects to Private.
- C. Enable the Salesforce Spam Check for Experience Sites.
- D. Provide constituents with a search page on Bohabaven's website to look up application reference numbers and check the application's progress.
- E. Deploy grant application OmniScripts on Bohabaven's Experience Site pages set to "Requires Login."

答案: A,B,E

解題說明:

A (Implement spam checking for Bohabaven's Experience..); B (Deploy grant application OmniScripts on Bohabaven's..); C (Set the external organization-wide default sharing..). This answer fits because the requirement is about the specific platform mechanism named in the option, not a nearby workaround.

The Core Concept Explained: OmniStudio separates guided interaction, data mapping, orchestration, and UI presentation. That separation is critical for high-volume public-sector intake because each asset can be tested and reused independently.

Step-by-Step Technical Analysis: Design the user journey first, then decide which OmniStudio asset owns each responsibility.

OmniScript captures guided input, DataRaptors map Salesforce data, Integration Procedures orchestrate server-side work, and

FlexCards expose summarized context. After assembly, validate data payloads, error handling, security, and performance with realistic application records. Use CAPTCHA for spam checking, deploy grant application OmniScripts on pages that require login, and set external organization-wide defaults for grant application objects to Private.

Why the Incorrect Options Are Wrong: D does not meet the implementation-quality bar for security, scale, auditability, or maintainability in this scenario. E does not meet the implementation-quality bar for security, scale, auditability, or maintainability in this scenario.

問題 #46

Department of Disaster Assistance has started implementing a "Grants Management" project using public sector solutions tools. As part of the business process, the department staff has to send an agreement to the Grant Seeker on the funding amount and related conditions. The turnaround time from both parties in exchanging the documents with signatures takes longer than expected. What is the best way to solve the problem using the available toolset with minimum/less coding?

- A. Install and Configure the DocuSign managed package for Salesforce and send the document envelope from the flow using apex action
- B. Install and Configure the DocuSign managed package for Salesforce and send the document envelope from the flow using standard DocuSign actions
- C. Set up the DocuSign integration electronic Signature and use Omniscript GenericDocuSign/ObtainEsignature to send the document to related parties
- D. Set up the DocuSign integration electronic Signature and use Omniscript GenericDocuSign/sendEsignature to send the document to related parties

答案： C

解題說明：

Set up the DocuSign integration electronic Signature and use Omniscript GenericDocuSign/ObtainEsignature to send the document to.. This maps the scenario to the Salesforce-native capability that owns the requirement.

The Core Concept Explained: Uses the packaged eSignature path that minimizes custom code for grant agreements, contracts, and other public-sector documents requiring external acknowledgement. OmniStudio separates guided interaction, data mapping, orchestration, and UI presentation. That separation is critical for high-volume public-sector intake because each asset can be tested and reused independently.

Step-by-Step Technical Analysis: Design the user journey first, then decide which OmniStudio asset owns each responsibility. OmniScript captures guided input, DataRaptors map Salesforce data, Integration Procedures orchestrate server-side work, and FlexCards expose summarized context. After assembly, validate data payloads, error handling, security, and performance with realistic application records. Configure the selected capability declaratively first, then add automation only where the packaged feature does not cover the required lifecycle or user experience.

Why the Incorrect Options Are Wrong: A adds a custom build path and increases lifecycle, security, and upgrade effort when a packaged or declarative capability already supports the requirement. B may look related, but it does not place the logic in the correct declarative Public Sector or OmniStudio configuration layer. C may look related, but it does not place the logic in the correct declarative Public Sector or OmniStudio configuration layer.

問題 #47

A government agency is planning a Public Sector Solutions implementation. What are three main constraints that government agencies often have in project implementation?

- A. Scope, Schedule and Cost
- B. Workshops, Schedule and Cost
- C. Scope, Tools and Cost
- D. Scope, Resources and Cost

答案： A

解題說明：

Scope, schedule and cost are the three main constraints that government agencies often have in project implementation. Scope defines the goals, deliverables, and requirements of the project. Schedule defines the timeline, milestones, and dependencies of the project. Cost defines the budget, resources, and risks of the project. These three constraints are also known as the project management triangle or the triple constraint.

問題 #48

A government-supported agency that helps constituents track the status of their claims is using Public Sector Solutions. For claim assessors to review and process claims, it is crucial to see the applications' Decision Explanation Logs. Which component can be added to see the history of Decision Explanations for a claim?

- A. Log History
- B. Record History
- C. Audit Log
- **D. Decision Explainer Log History**

答案： D

解題說明：

Decision Explainer Log History. This selection keeps the implementation declarative and within the intended Public Sector operating model.

The Core Concept Explained: Business Rules Engine externalizes decision logic from custom code. Expression Sets orchestrate calculations and can call decision assets so policy thresholds remain maintainable by authorized business users.

Step-by-Step Technical Analysis: Identify the inputs that drive the decision, declare them as Expression Set resources, and use Decision Matrices or Decision Tables where business users must maintain rule thresholds. Execute representative samples before activation, then confirm the output and Decision Explainer history match the expected eligibility, fee, or prioritization result. Add the Decision Explainer Log History component to the relevant Lightning record page.

Why the Incorrect Options Are Wrong: A may look related, but it does not place the logic in the correct declarative Public Sector or OmniStudio configuration layer. B may look related, but it does not place the logic in the correct declarative Public Sector or OmniStudio configuration layer. D may look related, but it does not place the logic in the correct declarative Public Sector or OmniStudio configuration layer.

問題 #49

A government agency wants to digitize hundreds of PDF forms for its employees. Which Employee Experience for Public Sector feature(s) are most important to address this opportunity?

- **A. Salesforce OmniStudio, Flows, Employee and Public Sector Data Models, and Employee Community**
- B. Salesforce Flows, Customer Community, and Individual Account
- C. Salesforce Flows, Employee and Public Sector Data Models, and Employee Community
- D. Salesforce Flows, APEX, Custom Objects, and VisualForce

答案： A

解題說明：

Salesforce OmniStudio, Flows, Employee and Public Sector Data Models, and Employee Community. This is the packaged route that keeps the process supportable, auditable, and aligned to the data model.

The Core Concept Explained: OmniStudio separates guided interaction, data mapping, orchestration, and UI presentation. That separation is critical for high-volume public-sector intake because each asset can be tested and reused independently.

Step-by-Step Technical Analysis: Design the user journey first, then decide which OmniStudio asset owns each responsibility. OmniScript captures guided input, DataRaptors map Salesforce data, Integration Procedures orchestrate server-side work, and FlexCards expose summarized context. After assembly, validate data payloads, error handling, security, and performance with realistic application records. Use OmniStudio, Flow, Employee and Public Sector data models, and an Employee Community experience.

Why the Incorrect Options Are Wrong: B adds a custom build path and increases lifecycle, security, and upgrade effort when a packaged or declarative capability already supports the requirement. C may look related, but it does not place the logic in the correct declarative Public Sector or OmniStudio configuration layer. D adds a custom build path and increases lifecycle, security, and upgrade effort when a packaged or declarative capability already supports the requirement.
