The contents of AIP-210 study materials are all compiled by industry experts based on the examination outlines and industry development trends over the years. And our AIP-210 exam guide has its own system and levels of hierarchy, which can make users improve effectively. Our AIP-210 learning dumps can simulate the real test environment. After the exam is over, the system also gives the total score and correct answer rate.

All AIP-210 practice questions you should know are written in them with three versions to choose from: the PDF, the Software and the APP online. At the same time, the experts who compiled the AIP-210 learning engine are assiduously over so many years in this field. I can say that our experts have become the authority in this career. And they are good at simplifying the content of the AIP-210 Exam Braindumps to be understood by our customers all over the world.

AIP-210 Valid Test Tutorial, New AIP-210 Test Camp

Professional certification can not only improve staff's technical level but also enhance enterprise's competition. Valid CertNexus AIP-210 latest exam cram pdf will be necessary for every candidate since it can point out key knowledge and most of the real test question. AIP-210 Latest Exam Cram pdf provides you the simplest way to clear exam with little cost.

CertNexus Certified Artificial Intelligence Practitioner (CAIP) Sample Questions (Q37-Q42):

NEW QUESTION # 37

Which of the following tools would you use to create a natural language processing application?

- A. AWS DeepRacer
- B. Azure Search
- C. NLTK
- D. DeepDream

Answer: C

Explanation:
Explanation

NLTK (Natural Language Toolkit) is a Python library that provides a set of tools and resources for natural language processing (NLP). NLP is a branch of AI that deals with analyzing, understanding, and generating natural language texts or speech. NLTK offers modules for various NLP tasks, such as tokenization, stemming, lemmatization, parsing, tagging, chunking, sentiment analysis, named entity recognition, machine translation, text summarization, and more .

NEW QUESTION # 38

Workflow design patterns for the machine learning pipelines:

- A. Represent a pipeline with directed acyclic graph (DAG).
- B. Seek to simplify the management of machine learning features.
- C. Aim to explain how the machine learning model works.
- D. Separate inputs from features.

Answer: A

Explanation:

Workflow design patterns for machine learning pipelines are common solutions to recurring problems in building and managing machine learning workflows. One of these patterns is to represent a pipeline with a directed acyclic graph (DAG), which is a graph that consists of nodes and edges, where each node represents a step or task in the pipeline, and each edge represents a dependency or order between the tasks. A DAG has no cycles, meaning there is no way to start at one node and return to it by following the edges. A DAG can help visualize and organize the pipeline, as well as facilitate parallel execution, fault tolerance, and reproducibility.

NEW QUESTION # 39

Which of the following can benefit from deploying a deep learning model as an embedded model on edge devices?

- A. Guaranteed availability of enough space
- B. Reduction in latency
- C. Increase in data bandwidth consumption
- D. A more complex model

Answer: B

Explanation:

Explanation

Latency is the time delay between a request and a response. Latency can affect the performance and user experience of an application, especially when real-time or near-real-time responses are required. Deploying a deep learning model as an embedded model on edge devices can reduce latency, as the model can run locally on the device without relying on network connectivity or cloud servers. Edge devices are devices that are located at the edge of a network, such as smartphones, tablets, laptops, sensors, cameras, or drones.

NEW QUESTION # 40

Which two of the following criteria are essential for machine learning models to achieve before deployment?

(Select two.)

- A. Portability
- B. Explainability
- C. Data size
- D. Complexity
- E. Scalability

Answer: B,E

Explanation:

Scalability and explainability are two criteria that are essential for ML models to achieve before deployment.

Scalability is the ability of an ML model to handle increasing amounts of data or requests without compromising its performance or quality. Scalability can help ensure that the model can meet the demand and expectations of users or customers, as well as adapt to changing conditions or environments. Explainability is the ability of an ML model to provide clear and intuitive explanations for its predictions or decisions.

Explainability can help increase trust and confidence among users or stakeholders, as well as enable accountability and responsibility for the model's actions and outcomes.

NEW QUESTION # 41

An HR solutions firm is developing software for staffing agencies that uses machine learning.

The team uses training data to teach the algorithm and discovers that it generates lower employability scores for women. Also, it predicts that women, especially with children, are less likely to get a high-paying job.

Which type of bias has been discovered?

- A. Emergent
- **B. Preexisting**
- C. Automation
- D. Technical

Answer: B

Explanation:

Explanation

Preexisting bias is a type of bias that originates from historical or social contexts, such as stereotypes, prejudices, or discriminations. Preexisting bias can affect the data or the algorithm used for machine learning, as well as the outcomes or decisions made by machine learning. Preexisting bias can cause unfair or harmful impacts on certain groups or individuals based on their attributes, such as gender, race, age, or disability³. In this case, the software that uses machine learning generates lower employability scores for women and predicts that women, especially with children, are less likely to get a high-paying job. This indicates that the software has preexisting bias against women, which may reflect the historical or social inequalities or expectations in the labor market.
