What's more, part of that itPass4sure Deep-Security-Professional dumps now are free: <https://drive.google.com/open?id=1Q- auBbH7oFJ7CJAT2QvKIUjQYCaAajF8>

You may bear the great stress in preparing for the Deep-Security-Professional exam test and do not know how to relieve it. Dear, please do not worry. itPass4sure Deep-Security-Professional reliable study torrent will ease all your worries and give you way out. From itPass4sure, you can get the latest Trend Deep-Security-Professional exam practice cram. You know, we arrange our experts to check the latest and newest information about Deep-Security-Professional Actual Test every day, so as to ensure the Deep-Security-Professional test torrent you get is the latest and valid. I think you will clear all your problems in the Deep-Security-Professional actual test.

Trend Deep-Security-Professional exam, also known as the Trend Micro Certified Professional for Deep Security, is a certification program designed to validate the skills and knowledge of professionals in the field of cybersecurity. Deep-Security-Professional exam is intended for individuals who want to demonstrate their expertise in implementing, configuring, and managing the Trend Micro Deep Security solution. It is also ideal for those who want to enhance their careers in the cybersecurity industry.

Trend Deep-Security-Professional exam is rigorous, and candidates are required to demonstrate their knowledge and skills through a combination of practical and theoretical questions. Deep-Security-Professional exam is conducted in a proctored environment, and candidates must adhere to strict guidelines to ensure the integrity of the certification process.

Trend Deep-Security-Professional Certification Exam is a rigorous examination that tests individuals on their knowledge and skills in using Trend Micro's Deep Security software. Trend Micro Certified Professional for Deep Security certification is designed for IT professionals who are responsible for securing their organization's infrastructure against cyber threats. Trend Micro Certified Professional for Deep Security certification exam ensures that professionals have the knowledge and expertise to use Deep Security effectively.

**100% Pass Deep-Security-Professional - Trend Micro Certified Professional for Deep Security Updated Examcollection Dumps**

The itPass4sure is a reliable platform that is committed to making your preparation for the Trend Deep-Security-Professional examination easier and more effective. To meet this objective, the itPass4sure is offering updated and real Trend Micro Certified Professional for Deep Security Deep-Security-Professional exam dumps. These Trend Deep-Security-Professional Exam Questions are approved by experts. They work together and analyze the examination content to compile most probable Deep-Security-Professional real dumps in three formats. These Trend Exams questions will surely appear in the next Trend Deep-Security-Professional test.

## **Trend Micro Certified Professional for Deep Security Sample Questions (Q66-Q71):**

### **NEW QUESTION # 66**

Which of the following statements is false regarding the Log Inspection Protection Module?

- A. Scan for Recommendations identifies Log Inspection rules that Deep Security should implement.
- B. Deep Security Manager collects Log Inspection Events from Deep Security Agents at every heartbeat.
- **C. The Log Inspection Protection Module is supported in both agent-based and agentless environments.**
- D. Custom Log Inspections rules can be created using the Open Source Security (OSSEC) standard.

**Answer: C**

Explanation:

Log Inspection requires running some analysis on the computer and is not supported in Agentless deployments.

Explication: Study Guide - page (310)

### **NEW QUESTION # 67**

How is scan caching used in agentless implementations of Deep Security?

- A. Scan caching is used in Agent-based installations only and is not supported in an agentless implementation.
- **B. Scan caching enhances the performance of the Deep Security Virtual Appliance in that files scanned for malware on a virtual machine that appear on other virtual machines may not need to be scanned again.**
- C. Scan caching maintains the Inclusions and Exclusions lists from the Malware Scan Configuration in memory to improve performance.
- D. Scan caching manages resource usage by staggering the launch of malware scans to prevent scan storms

**Answer: B**

Explanation:

In agentless (VMware-integrated) implementations, scan caching allows the Deep Security Virtual Appliance to remember which files have already been scanned on any VM on the same host. If the same file appears on another VM, it doesn't need to be scanned again, significantly improving performance and reducing resource usage.

### **NEW QUESTION # 68**

The details of a policy are displayed in the exhibit. Based on these details, which of the following statements is true?

- **A. The credibility scores for visited web sites will be cached. If access to the web site is re-requested again within 30 minutes, its credibility score will be retrieved from the cache instead of the configured Smart Protection source.**
- B. Any events generated by computers within your corporate network, as defined by an IP address range, will be ignored
- C. Packets failing the Network Packet Sanity Check will still be allowed to pass through the network engine.
- D. Live packet streams coming through the network engine will be replicated and all traffic analysis will be performed on the replicated stream

**Answer: A**

Explanation:

In the provided policy (refer to the screenshot):

The Cache Lifetime is set to "Inherited (30 Minutes)" and the Cache Stale Time is set to "Inherited (15 Minutes)." This means

credibility scores (such as from Web Reputation) are cached, and if a website is revisited within 30 minutes, its credibility score is fetched from the cache rather than querying the Smart Protection source again. This improves efficiency and reduces network requests.

From the documentation:

"Cache Lifetime: The amount of time to keep credibility scores for URLs in the cache. If the same URL is visited again within this time, the cached result is used instead of re-querying the Smart Protection source." (Source: Trend Micro Deep Security Administrator's Guide - Web Reputation section) Options B, C, and D are incorrect based on the settings shown:

B: "Network Packet Sanity Check Failure" is set to "Fail closed," so packets will NOT be allowed if they fail this check.

C: There is no IP address filtering or event exclusion shown in the screenshot.

D: There is no mention or configuration of packet stream replication.

## NEW QUESTION # 69

What is the effect of the Firewall rule displayed in the following exhibit?

General Options Assigned To

**General Information**

Name: Sample Firewall Rule

Description:

Action: Allow

Priority: 0 - Lowest

Packet direction: Incoming

Frame Type: IP

Protocol: TCP+UDP

**Packet Source**

IP: Any

MAC: Any

Port: Any

**Packet Destination**

IP: Any

MAC: Any

Port: Any

**Specific Flags**

Any Flags

URG  ACK  PSH  RST  SYN  FIN

Not

**Events**

OK Cancel Apply

- A. This rule will allow incoming TCP and UDP communication to this server.
- B. This rule will allow TCP and UDP replies to requests originating on this server.
- C. This rule will allow outgoing TCP and UDP communication from this server.
- D. This rule will allow incoming communication to this server, but not TCP and UDP.

**Answer: A**

#### Explanation:

The rule shown is an "Allow" rule with the following characteristics:

Direction: Incoming

Protocol: TCP + UDP

Source/Destination: Any (not restricted)

Specific Flags: RST and SYN are selected

This configuration will permit incoming TCP and UDP traffic to the server. The selected flags (RST, SYN) allow for new and reset connection establishment, which is typical for permitting inbound connections.

Outgoing communication would require an outgoing rule, which is not defined here.

#### NEW QUESTION # 70

The maximum disk space limit for the Identified Files folder is reached. What is the expected Deep Security Agent behavior in this scenario?

- A. Files will no longer be able to be quarantined. Any new files due to be quarantined will be deleted instead.
- B. Any existing files are in the folder are compressed and forwarded to Deep Security Manager to free up disk space.
- C. Deep Security Agents will delete any files that have been in the folder for more than 60 days.
- D. Deep Security Agents will delete the oldest files in this folder until 20% of the allocated space is available.

#### Answer: D

#### Explanation:

If the limit is reached, the oldest files will be deleted first until 20% of allocated space is freed up.

Explication: Study Guide - page (203)

#### NEW QUESTION # 71

.....

The time and energy are all very important for the office workers. In order to get the Deep-Security-Professional certification with the less time and energy investment, you need a useful and valid Trend study material for your preparation. Deep-Security-Professional free download pdf will be the right material you find. The comprehensive contents of Deep-Security-Professional practice torrent can satisfied your needs and help you solve the problem in the actual test easily. Now, choose our Deep-Security-Professional study practice, you will get high scores.
