We take client's advice on AZ-500 training prep seriously and develop it with the advices.

## Microsoft Azure Security Technologies Sample Questions (Q106-Q111):

### NEW QUESTION # 106

You have an Azure Sentinel workspace that has the following data connectors:

Azure Active Directory Identity Protection

Common Event Format (CEF)

Azure Firewall

You need to ensure that data is being ingested from each connector.

From the Logs query window, which table should you query for each connector? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

**Answer:**

Explanation:

□

### NEW QUESTION # 107

Lab Task

use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Azure Username: User1-28681041@ExamUsers.com

Azure Password: GpOAe4@IDg

If the Azure portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 28681041

Task 2

You need to add the network interface of a virtual machine named VM1 to an application security group named ASG1.

**Answer:**

Explanation:

To add the network interface of a virtual machine named VM1 to an application security group named ASG1, you can follow these steps:

In the Azure portal, search for and select the virtual machine named VM1.

In the left pane, select Networking.

In the Networking pane, select the network interface that you want to add to the application security group named ASG1.

In the network interface pane, select Application security groups.

In the Application security groups pane, select Add.

In the Add application security group pane, select the application security group named ASG1.

Select Save.

You can find more information on this topic in the following Microsoft documentation: Add a network interface to an application security group using the Azure portal.

### NEW QUESTION # 108

Your company has two offices in Seattle and New York. Each office connects to the Internet by using a NAT device. The offices use the IP addresses shown in the following table.

□ The company has an Azure Active Directory (Azure AD) tenant named contoso.com. The tenant contains the users shown in the following table.

□ The MFA service settings are configured as shown in the exhibit. (Click the Exhibit tab.)

□ For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

□

**Answer:**

Explanation:

□ Explanation

□ Box 2: No

Use of Microsoft Authenticator is not required.

Note: Microsoft Authenticator is a multifactor app for mobile devices that generates time-based codes used during the Two-Step Verification process.

□ Box 3: No

The New York IP address subnet is included in the "skip multi-factor authentication for request."
