

Free PDF ServiceNow - Useful CIS-PA - Certified Implementation Specialist - Platform Analytics Valid Exam Preparation

DOWNLOAD the newest Real4Prep CIS-PA PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1RgxwQxqMCFRhXxIYfhKg8SBzkZmVntj9>

Our CIS-PA prep material target all users and any learners, regardless of their age, gender and education background. We provide 3 versions for the clients to choose based on the consideration that all the users can choose the most suitable version to learn. The 3 versions each support different using method and equipment and the client can use the CIS-PA Exam Dump on the smart phones, laptops or the tablet computers. The clients can choose the version which supports their equipment on their hands to learn.

Do you still worry about that you can't find an ideal job and earn low wage? You can try to obtain the CIS-PA certification and if you pass the CIS-PA exam you will have a high possibility to find a good job with a high income. If you buy our CIS-PA questions torrent you will pass the exam easily and successfully. Our CIS-PA Study Materials are compiled by experts and approved by professionals with experiences for many years. The high quality of our CIS-PA exam questions can help you pass the CIS-PA exam easily.

Accurate CIS-PA Valid Exam Preparation - Valuable & Professional CIS-PA Materials Free Download for ServiceNow CIS-PA Exam

Many candidates do not have actual combat experience, for the qualification examination is the first time to attend, they always feel aimless and worried about the CIS-PA exam very much. But we can help all of these candidates on CIS-PA study questions. Numerous grateful feedbacks from our loyal customers proved that we are the most popular vendor in this field to offer our CIS-PA preparation questions. You can totally rely on us.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which statements describe the respective Performance Analytics object behavior?

- A. The frequency of an Indicator can differ from that of an Indicator Source
- B. Indicator Sources with a Monthly frequency can still be collected in a Daily job
- C. Breakdowns require a Breakdown Mapping to be added to an Automated Indicator
- D. Data collection must be completed before assigning Breakdowns to an Indicator

Answer: A,B

Explanation:

In ServiceNow Performance Analytics, Indicator Sources and Indicators are distinct objects with different responsibilities, and understanding their behavior is essential for correct architecture and deployment.

Option A is correct.

Indicator Sources define how and when raw data is queried, but they can be reused by multiple data collection jobs. Even if an Indicator Source is configured with a Monthly frequency, it can still be executed by a Daily data collection job. The job frequency controls execution timing, not the source frequency itself. This reuse is a documented performance optimization in Platform Analytics.

Option C is correct.

The Indicator frequency is independent of the Indicator Source frequency. For example, an Indicator Source may collect daily raw data, while the Indicator aggregates and stores scores weekly or monthly. This separation allows flexible aggregation strategies and is explicitly supported by Platform Analytics design.

Option B is incorrect because Breakdowns require a Breakdown Mapping, but they are not inherently tied only to Automated Indicators, nor is this statement describing object behavior accurately in isolation.

Option D is incorrect because Breakdowns can be assigned to an Indicator before or after data collection; they are applied when the next collection runs.

NEW QUESTION # 23

A filtered Time Series widget shows individual trends for the number of open incidents with High and Critical priorities.

Which action configures the Responsive Canvas Dashboard to show a combined trend for the Critical and High-priority incidents?

- A. Set the Show multiple elements as property to Separate
- B. Check Manual elements and add widget elements for the High and Critical incidents
- C. Set the Show multiple elements as property to Aggregate
- D. Apply an elements filter to return High and Critical incidents only

Answer: C

Explanation:

In Responsive Canvas dashboards, when a Time Series widget contains multiple elements, the Show multiple elements as property controls how those elements are visualized. Setting this property to Aggregate combines the values of all returned elements into a single trend line, which is exactly the desired outcome when viewing a combined trend for High and Critical priority incidents.

Applying an elements filter (option D) limits which elements are displayed but does not combine them into one trend. Setting the property to Separate (option C) explicitly shows individual trend lines for each element.

Manually adding elements (option B) still results in multiple distinct series unless aggregation is enabled.

According to ServiceNow Platform Analytics documentation, aggregation is the correct method for consolidating multiple indicator elements into one unified visualization on a dashboard.

NEW QUESTION # 24

Which definition describes the functionality of a Formula Indicator?

- A. A Formula Indicator can use up to 5 Automated Indicators
- B. The Formula Indicator score is calculated when the Formula Indicator is viewed
- C. A Formula Indicator can reference the Indicator Threshold value
- D. A Formula Indicator is needed anytime you need to calculate an aggregate

Answer: A

Explanation:

A Formula Indicator in ServiceNow Platform Analytics allows you to calculate a derived score using up to five other

indicators(automated or manual) through a mathematical expression. These component indicators must already exist and have collected data.

Formula Indicators aren't calculated at view time; instead, they are pre-calculated during data collection and stored like other indicator scores. This ensures consistent historical trending and optimal dashboard performance. Aggregates such as count or sum are handled by automated indicators, not formula indicators.

Formula indicators also cannot reference indicator threshold values, as thresholds are used only for KPI status evaluation and visualization, not for calculations.

ServiceNow documentation clearly states the five-indicator limit and emphasizes that Formula Indicators are meant for derived metrics, such as percentages, ratios, or normalized scores, making option B the only correct definition.

NEW QUESTION # 25

When using a Bucket Group as a Breakdown Source, which is the required Breakdown Source Facts table?

- A. The Indicator Facts table
- B. Bucket Group [pa_bucket_groups]
- C. Bucket [pa_buckets]
- D. Choice [sys_choice]

Answer: C

Explanation:

When a Bucket Group is used as a Breakdown Source in Platform Analytics, the required Facts table is Bucket [pa_buckets]. Bucket Groups define how numeric or duration values (such as age, time, or cost ranges) are grouped, but they do not store analytics facts themselves. The actual bucketed values generated during data collection are stored in the pa_bucket table, which makes it the authoritative facts table for bucket-based breakdowns.

The pa_bucket_group table only stores configuration metadata for bucket definitions. The sys_choice table is used exclusively for choice list values and is unrelated to bucket analytics. The Indicator Facts table stores indicator scores but does not contain bucket-level breakdown data. ServiceNow documentation explicitly states that any breakdown based on bucket groups must reference the pa_bucket table to ensure accurate historical analysis and proper breakdown rendering. Therefore, option C is the only correct answer.

NEW QUESTION # 26

When creating a breakdown on the age of a task, which table can be used as the Facts table of the Breakdown Source?

- A. Task [task]
- B. Bucket Group
- C. Bucket [pa_buckets]
- D. Choice [sys_choice]

Answer: C

Explanation:

When creating a breakdown based on the age of a task, the correct Facts table for the Breakdown Source is Bucket [pa_buckets]. In Platform Analytics, age-based breakdowns (such as 0-5 days, 6-10 days, etc.) are not derived directly from the Task table. Instead, they use bucketed data, which is generated by bucket groups during data collection.

The pa_bucket table stores the calculated bucket values for records at collection time, making it the authoritative facts table for age, duration, and numeric range breakdowns. Bucket Groups define how values are grouped, while the Bucket table stores the actual bucket assignments used in analytics. The Task table itself cannot be used as the facts table for age breakdowns because Platform Analytics requires pre-aggregated, time-aware bucket data to ensure historical accuracy. The Choice table is only used for choice list values and is unrelated to numeric or age-based breakdowns. ServiceNow documentation clearly states that bucket-based breakdowns must reference the pa_bucket table to function correctly and produce accurate time series analytics.

NEW QUESTION # 27

.....

Our goal is to increase customer's satisfaction and always put customers in the first place. As for us, the customer is God. We provide you with 24-hour online service for our CIS-PA study tool. If you have any questions, please send us an e-mail. We will

promptly provide feedback to you and we sincerely help you to solve the problem. Our specialists check daily to find whether there is an update on the CIS-PA study tool. If there is an update system, we will automatically send it to you. Therefore, we can guarantee that our CIS-PA Test Torrent has the latest knowledge and keep up with the pace of change. Many people are worried about electronic viruses of online shopping. But you don't have to worry about our products. Our CIS-PA exam materials are absolutely safe and virus-free. If you encounter installation problems, we have professional staff to provide you with remote online guidance. We always put your needs in the first place.
