## 최신버전 Deep-Security-Professional높은 통과율 시험자료 완벽한 시험 최신 덤프

ExamPassdump에서 제공하는 제품들은 품질이 아주 좋으며 또 업뎃속도도 아주 빠릅니다 만약 우리가제공하는 Trend Deep-Security-Professional인증시험관련 덤프를 구매하신다면Trend Deep-Security-Professional시험은 손쉽게 성공적으로 패스하실 수 있습니다.

시험은 다양한 주제를 다루며, Deep Security 플랫폼과 관련된 주제를 포함합니다. 이는 설치 및 구성, 보안 정책 및 규칙, 이벤트 관리 및 보고, 그리고 문제 해결 등을 다룹니다. 시험에서는 또한 응시자의 보안 최상의 실천 방법 및 업계 표준 지식을 테스트합니다. 이는 Payment Card Industry Data Security Standard (PCI DSS) 및 Health Insurance Portability and Accountability Act (HIPAA)와 같은 것들이 포함됩니다.

## 최신 Deep Security Deep-Security-Professional 무료 샘플문제 (Q64-Q69):

### 질문 # 64

How can you prevent a file from being scanned for malware?

- A. Edit the "Scan Exclusions" section of the dsa.properties configuration file on the Deep Security Agent computer to include the file name. Save the configuration file and restart the Deep Security Agent service.
- B. Enable "File Types scanned by IntelliScan" in the Malware Scan Configuration properties in the Deep Security Manager Web console. Click "Scan All Except" and type the filename to exclude from the scan.

- C. Add the file to the Exclusions list in the "Allowed Spyware/Grayware Configuration".
- D. Add the file to the Exclusions list in the Malware Scan Configuration.

**정답: D**

**설명:**

To exclude files from malware scans, add them to the Exclusions list in the Malware Scan Configuration via the Deep Security Manager Web console. This is the official and recommended method.

From the official documentation:

"Files or folders added to the Exclusions list in the Malware Scan Configuration will not be scanned for malware." References: Trend Micro Deep Security Anti-Malware Guide: Scan Exclusions  
Deep Security Help: Excluding Files from Scans

**질문 # 65**

Based on the details of event displayed in the exhibit, which of the following statements is false?

- A. The Intrusion Prevention Protection Modules must be enabled to detect reconnaissance scans.
- B. The scan may be generated from an IP address which may be known to you. If so, the source IP address can be added to the reconnaissance whitelist.
- C. You can instruct the Deep Security Agents and Appliances to block traffic from the source IP address for a period of time.
- D. You can create a firewall rule to permanently block traffic from the originating IP address.

**정답: B**

**질문 # 66**

The Firewall Protection Module is enabled on a server through the computer details. What is default behavior of the Firewall if no rules are yet applied?

- A. All traffic is permitted through the firewall until either a Deny or Allow rule is assigned.
- B. All traffic is passed through the Firewall using a Bypass rule
- C. A collection of default rules will automatically be assigned when the Firewall Protection Module is enabled.
- D. All traffic is blocked by the firewall until an Allow rule is assigned.

**정답: A**

**설명:**

When you enable the Firewall Protection Module in Trend Micro Deep Security and no firewall rules are assigned, the default behavior is to permit all network traffic. This default-allow approach ensures that enabling the firewall module does not unintentionally block legitimate traffic and cause disruptions.

According to the official administration guide:

"When you enable the Firewall module but do not assign any rules, all network traffic is permitted by default until you create and assign firewall rules to allow or deny specific traffic." (Source: Trend Micro Deep Security Administrator's Guide, Firewall Protection Module section) Option B is incorrect because Deep Security does not automatically assign a collection of default rules; you must explicitly assign or create them. Option C is incorrect because there is no default-deny stance when rules are absent. Option D does not accurately reflect the module's default operation.

**질문 # 67**

A Deep Security administrator wishes to monitor a Windows SQL Server database and be alerted of any critical events which may occur on that server. How can this be achieved using Deep Security?

- A. The administrator could install a Deep Security Agent on the server hosting the Windows Server 2016 database and enable the Intrusion Prevention Protection Module. A Recommendation Scan can be run and any suggested rule can be assigned to monitor the Windows SQL Server for any vulnerabilities, with Alerts enabled.
- B. The administrator could install a Deep Security Agent on the server hosting the Windows Server 2016 database and

enable the Log Inspection Protection Module. A rule can be assigned to monitor the Windows SQL Server for any critical events, with Alerts enabled.

- C. The administrator could install a Deep Security Agent on the server hosting the Windows Server 2016 database and enable the Integrity Monitoring Protection Module. A rule can be assigned to monitor the Windows SQL Server for any modifications to the server, with Alerts enabled.
- D. This can not be achieved using Deep Security. Instead, the administrator could set up log forwarding within Windows SQL Server 2016 and the administrator could monitor the logs within the syslog device.

정답: B

### 질문 # 68

What is the role of Apex Central in the Connected Threat Defense infrastructure?

- A. Apex Central distributes Deep Security policies to Agents on the protected Servers.
- B. Apex Central submits suspicious files to Deep Discovery Analyzer for further analysis.
- C. Apex Central compiles the Suspicious Objects List based on the result of file analysis in Deep Discovery Analyzer.
- D. Apex Central stores suspicious files that are awaiting submission to the Deep Discovery Analyzer.

정답: C

### 설명:

Apex Central receives threat intelligence from Deep Discovery Analyzer, compiles the Suspicious Objects List, and distributes it to integrated security products across the environment, enhancing coordinated defense.
